Good luck mates ?

you might wana fix one typo, its now "Windows Application Firewall" its a Web Application Firewall
"Windows" would at least in my mind, be saying that, that form of protection only applies to sites

hosted on a windows machine. so yea might wana fix that small typo lol.

Is there any CSRF tuts?

Definition.

Cross-site Request Forgery (CSRF) is a type of attack whereby unauthorized commands are transmitted from a user that the application trusts. Unlike Cross-site Scripting (XSS), which exploits the trust a user has for a particular site, CSRF exploits the trust that a site has in a user's browser.

You're wrong. Tutorials were posted here, hence, compilation of tutorials can also be posted here.
Don't teach me where to post.
Thanks for your feedback.

newb_web_security - May 8, 2013, 6:56 pm

Hi I am a newb and studying for my software engineering certification. I know a bit about web security but thought maybe this direction would teach me some good stuff. I only want to learn white hat hacking. I would like to do a few easy things like facebook hack, a few forums, etc. Also I would like to say that your tutorials are amazing. There is just so many I don't know where to start. haha I am using a mac and would like to know how to do basic hacking. like in your tutorial about dorks. But when I get the error message

i.e.. 1064: You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near "index.php?id=22" LIMIT 1' at line 1

what do I do now? how to go I go further? you can pm if you like. I just want to learn from the best as I am a quick learner I just need the right teacher and information, links, etc.
