Thread: [omega Bugs, Flames, Comments](#)

r-22 - December 10, 2009, 1:04 am

please feel free to view the public versions here:

<http://4x10m.limewebs.com/>

<http://4x10m.limewebs.com/omega.rar>

TODO:

create a wrapper for rxbot scanner

create omega core scanner

add more exploits

add tftpd

more packet types for DDoS/DoS

DLL Injection

add socks4d

gnutella protocol handling

http control center

please feel free to add features to this

also if you find bugs add them too like

[BUG-00001]Line24:scanner.c- Invalid pointer to pointer type

May have something to do with the mis-cast variable

Use your imagination.

TOOLS

Visual Studio 2008 (cl.exe) on Windows

GNU C Compiler (gcc) on UNIX

Netwide Assembler (nasm) on Windows and UNIX

How about releasing that private one that you were talking about in the other thread? ;)

You know you wanna...

Also, stability wise, how good is it? Worth the hassle in setting it up?

the private source was lost in 2004 during a raid. it was on a pendrive that i had to destroy.

the bot does not ping out like rxbot used to if thats what youre asking.

Quick question, when I compiled it with the bat file given, then executed it, it was listening for connections from the internet.

Is there something that I'm not getting?

It has a built-in httpd for use with the 37085 exploit against ie7. The exploit has not been completed yet, but you can look through the httpd.c source file to see what it is doing.
