Thread: [\[Tut\] Hide your virus's in a image! \[/Tut\]](#)

VoLTaGeL33T - December 19, 2011, 10:24 am

Hide any file inside a picture!

Items Needed:

Any Icon Changer

A Binder

A Brain

1) Create your virus. We shall call it 'server1.exe' for now.

2) Get any picture file you want to distribute.

3) Bind the 'server1.exe' and your picture file with any binder, we'll call the binded file 'virus1.exe'.

3.5) I recommend Easy Binder 2.0, which comes with a bytes adder and a icon extractor, aswell as some really good packing options. I've uploaded it, virus free, to:

<http://www.mediafire.com/?igjy4dnn0zb> < This will be caught by your AV as "Binder/Kit". It is not a virus, it is a binder than is not undetectable. If you don't wish to use it, that's fine, find your own.

4) Be sure you have 'Hide common extensions' unchecked in your Folder Options.

5) Change the 'virus1.exe' to '%Picturename%.jpeg - %Email/Web Address%.com'. For example, we'll call it 'HPIC_119.jpeg - test@test.com'.

.com works the same as .exe, except fewer people actually know that's what it really is.

6) If you plan on distributing your virus via MSN, please skip to 7. If you plan on distributing your virus via file upload sites, please skip to 8.

6.5) I recommend Icon Extractor V3.8 FULL with Serial, that can be downloaded from this thread: <https://hackforums.net/showthread.php?tid=232221>

7) You will now need to change the icon from that ugly box. Find the picture you added to the file, and make it an icon. How? Find one of the various online Picture to Icon converters. Once your picture is a .ico, use your Icon Changer program to change the icon of the file to the .ico you just made from the picture. When you send it to people on MSN, it will show a small box of the picture inside.

8) You will not need to change the icon from that ugly box. Using your Icon Changer program, find the .jpeg icon, and change the ugly box to the .jpeg icon.

9) Conclusion. Your file will now look like a legit picture to 9/10 people. Some people do know that .com is an extension, but the average computer user will not see any difference, and will download it without hesitation.

HitTheRoadRunning - December 19, 2011, 1:18 pm

I already know how to do this, but this is a good tutorial.

Tehking - December 19, 2011, 1:19 pm

Thanks for this tut i was searching for this i will try it right now thanks.

wom - December 19, 2011, 2:33 pm

I can't find the 3rd thing :s. Jokes already knew this.

zIFuLLILeTe - December 19, 2011, 5:15 pm

this is a copy and paste from this thread.

<https://hackforums.net/showthread.php?tid=244061>

next time give some credits.

Percocet - December 19, 2011, 5:19 pm

Why copy paste? Seriously? Besides, lots already knew this. BTW, I've got a method to get easy installs with this method. Hit me up if you want it (\$5).

Rixxon - December 19, 2011, 5:21 pm

Good thread for members who may be new to the concept of binding.

Toxic Hacker - October 12, 2017, 6:15 am

cant understand the thread, got the download, but instructions unclear, photos not working

mariasimmons99 - October 16, 2017, 12:06 pm

OMG i had no idea this can be done, thanks a lot

Jesus this thread is from 2011.

File binding is so basic and easy to notice nowadays.
