Do you give any vouch copies out?

I would write a review and make videos of it buddy

T1M_0SMAN - December 20, 2011, 12:56 pm

Can I have a vouch copy to test it? :)

Will give a full review.

Virus1x - December 20, 2011, 12:59 pm

No vouch copies will be sold or given out! We have been around for quite sometime.

Good luck for the New sale i am satisfied With your product Thanks

?anksy cheke your PM *

The Milkshake Man - December 20, 2011, 4:58 pm

Still getting the error. Only happens when Start up is enabled. When I compiled my un-FUD'ed server, Startup was off.

I ran as admin to update it, and to crypt the file. AntiVirus is completely off. Using a mixed key, if it matters.

Any ideas on what to do to fix? Here's the error:

Copenhagen Wintergreen - December 20, 2011, 5:03 pm

Im having the issue also. Not too sure why.

Banks? - December 20, 2011, 5:05 pm

I'll look into it further. I think I know what this issue is though, hopefully.

The Milkshake Man - December 20, 2011, 5:07 pm

Alright, thanks Banksy.

Do you want to teamview the process or something? Like, what happens and all?

badlyfar - December 20, 2011, 5:58 pm

Having the same problem, if startup is enabled via crypter or rat. Using DC 4.2F Btw.

Westcoastcustoms - December 20, 2011, 6:13 pm

im sure itll be fixed soon enough. banksy's good at this.

Banks? - December 20, 2011, 6:56 pm

Alright, for everyone who has a problem. I can not get this to be fixed by having an automatic update. So, to get this update (this is the only one you'll have to do this for), please PM virus1x, and he will supply you with a DL link. After you do that, all updates will be okay, and the crypter will be working fine.

Virus1x - December 20, 2011, 7:02 pm

Yes, I have the DL Link contact me for this :)

Rage Against The Machine - December 20, 2011, 7:34 pm

what you guys do is delete all of your files and re-install its works fine now start-up and everything

also another question which encryption is the best

Westcoastcustoms - December 20, 2011, 8:02 pm

im still fiddling with encryption types to come up with a fud can get 1/36 pretty easy tho.

ISO - December 21, 2011, 2:04 am

Seem very nice , too bad I've got only 14,30\$ on my paypal.

Good lucks for sales anyway man !

What detection are you getting, so I can look into it?

Copenhagen Wintergreen - December 21, 2011, 5:29 am

Im still trying to open the new updated one but nothing pops up, So I try to end the process in task manager and it wont stop the process -.-. So I uninstalled it and installed it again but still when I open it as administrator nothing happens.

Virus1x - December 21, 2011, 5:31 am

Uninstall old one all together,

Take the new one..

Extract in a new folder :). .

Should look like...

Uninstall / Kill Process / Delete Previous Folder / Create New Folder / Move .RAR into new folder / extract / right click setup / run as admin

MAKE SURE YOUR NOT RUNNING ON A VM IT WOLN'T WORK

Copenhagen Wintergreen - December 21, 2011, 6:33 am

I did uninstall the old one even before I downloaded the new 1.

This is what im getting

[\[IMG\]http://img846.imageshack.us/img846/2064/cdfcdf3bd7e6abdadc92df5.png\[/IMG\]](http://img846.imageshack.us/img846/2064/cdfcdf3bd7e6abdadc92df5.png)

Yeah I do have the newest .net framework installed.

Virus1x - December 21, 2011, 6:42 am

Click continue I got that error before and it was caused my a process still being open reboot try to run again

Copenhagen Wintergreen - December 21, 2011, 6:49 am

Worked better after restart, But now im getting the same error when it asks me to update. The crypter works fine but with this cause an issue updating?

Teswolf96 - December 21, 2011, 7:23 am

I managed to get it working by manually running the extracted setup file in the ApoKrypt folder so it installed into the chronic folder. Then I manually ran the update file in the chronic folder to update it to the newest version!

legendxzero3 - December 21, 2011, 10:59 am

YES i fixxed it with the new setup u gave me! Also would you guys mind adding the scanner membership. Haven't been able to scan for a while =/

W00t, I'm so glad this crypter is back up and running. Thank god i didn't buy another crypter =D.
Probably the best crypter i've used out of 7, and the longest running yet! Huge Vouch. THanks
Bansky!

EDIT

I'm on version 3.8, i tried to crypt BlackShades, and i get 5/35 with mixxed encryption and poly. I
have startup on the crypter enabled. Are there specific settings to make it FUD?

I'm not trying to be a dick guys, but I am NOT support. I am the coder, and that is all. Please go to virus1x for all of your questions. There are only TWO exceptions to this. When buying copy, and you need your info because it got messed up; and if you want to resell your license.

legendxzero3 - December 21, 2011, 9:42 pm

Hey virus, i'm having some major issues getting my File to come out FUD. I got the new download

you sent me, and i'm trying to crypt my blackshades, with startup enabled on the crypter. I've tried mixxed and regular encryptions, and it's all coming out 5/35 or 6/35. Not sure exactly what is wrong, as it was working fine before. =/

The Milkshake Man - December 21, 2011, 9:56 pm

MediaFire detected a virus when I uploaded, using a mixed key with Startup, melt, and delay. It was DarkComet, if it mattered.

Nice update though. I like how you can mouse-over the 3 options and it explains what they do :)

You have a button on the webbrowser named "Login", but once you do it, sometimes it ask, sometimes not ^^

Btw, having some detections with Cybergate : http://scan4you.net/result.php?id=0e31c_12pjd
I've used mixed + Startup & AES encrypt and PolyRev after but come out wiht 6/35

Alright guys I've answered all your PM's, I am on MSN if anyone needs help

Banana_ - December 22, 2011, 3:40 pm

I do thoroughly enjoy this crypter. I hope it lasts for a very long time.

Bansky, Virus doesn't know how to make my server FUD. COuld you please add me on msn chingro@live.com thanks!

The Milkshake Man - December 22, 2011, 3:58 pm

Got this with a freshly generated DarkComet server, using a normal key, Startup, and PolyRev encryption

Teswolf96 - December 22, 2011, 4:49 pm

I just used the default! I was actually using a different one to begin with because it used to be FUD. Also, I used a delay of 2 so you might want to try that.

Guy's FUD's are possible but you have to be willing to spend a few minutes FUDDING your file the reason this is, is because everything you change makes your FILE SUPER UNIQUE and longer lasting that way if..

Hey everybody, I missing out. I love this crypter and it worked great until I installed a new hard drive and OS (XP.) I dlld .net 2.0, .net4.0.3... and when I try to use the crypter I get a huge error which basically says it cannot find the csc.exe file. I think I have Virus1x and Banksy stumped on this one. What did I do wrong? Did anyone else have the same problem and was able to resolve it? I found an old 40 gig hard drive and reformatted it and installed the updates along with the needed nets. I am hoping banksy will be nice enough to give me a new HWID code so I can try it. In the mean time, any ideas?

Why are you using mediafire? Why not something like dropbox (they don't actually distribute, contrary to popular belief).

Also, Norton detected it because of Sonar. I don't advertise my crypter bypassing it, because I just can't get it to bypass. I've tried many different things, I just can't get it. ?

m3llomatt82 - December 23, 2011, 11:03 am

Maybe mediafire has got you pegged. Recycle your IP and try to open again. Maybe mediafire is selling your works to AV companies. There are better ways to host your files. :) Only Norton sonar has always detected this somehow.

I have FUD builds right now. Make sure you change the Injection Process and Install/key. Also, use Normal, not mixed.

That's what I did, and it went from 6/35 to 0/35

Banana_ - December 23, 2011, 8:33 pm

If you keep the default settings, it more then likely will not be FUD. Simply change the startup key, injection process, and maybe add an item an it should be FUD.

Virus1x - December 24, 2011, 12:09 am

Anyone who claims they are not getting fud's on page 9 I listed 6 different methods to produce fuds, the more you play with it the more unique it gets the less likely to be quickly detected

Go0gle - December 24, 2011, 2:59 am

If startup is enabled..No matter what i get more than 3+ detection in every settings.

But startup is needed right ? Because when they reboot still they will be available right ?

But 2 days ago with startup enable i got 1/36 which is nice. that server is now 2/36 but the problem is kapersky found it. Thats why i m creading another crypted file..but no luck..spent 1 hour

Edit : Since 3 hours i cant even get the 2/36 detections on blackshades bot. Everytime 6/36, any user who does blackshades. please share ur settings and give tips.

Chronic Crypter is absolutely fantastic! The ease-of-use combined with the great number of features makes it a pleasure to use! It has good FUD time and many updates that bring useful, new features! I would love to write about the great support, but I haven't had to contact them yet as I have had no problems! Possibly. But the site has basically very little to no support. I already contacted the only ways that they have to contact them. I hope I get a response back. The main reason this pisses me off, is

because this is MY money that I use to pay for the account.

Don't remove it... it a really great option... :(... I suppose that you use unencrypted variable for the auto-input ? if yes, try to make something like that...it just done it in few minutes, and it easy to reverse, but it will stop or slowed some people... so i think you can put somewhere else the value for the password and encrypt it with a better encryption :) ! It truly doesn't matter if anyone knows the password or not, because you can't normally change it. Which means Scan4You must have prompted the person to change the password, and that person did so. This wouldn't be such a big problem if the person would just tell me the new password of the scan4you account.

WE WILL no longer offer scanners

EDIT: I've spoken to the coder of my-avscan.net / Ltest.

I have negotiated to get an account that we distribute tokens too, which we pay outta pocket each token gives you 1 hr of scanning.. at this point I don't know how many token's I will give everyone but this prevents the issue we had with scan4you.

Yes, exactly. Every single update is free. Even back when I once made a new crypter to replace Chronic (I eventually came back to Chronic, obviously), I updated every single customer to the new crypter. So in short, every single update is absolutely 100% free.

It works! I just asked the coder if I could use the RAT, and test, and with these settings it worked (first try aswell, so if you buy it, try some settings ^^):

Paradox:

No Crypter, No Persistence, No Startup

Chronic:

Startup

Working fine, and FUD as well!

Thats great, Will i be able to use the Icon changer, Assembly changer and Bind a fit girl image to it? Without it fucking up and will it be FUD with these settings?

Thanks pal,

Thanks pal,

Yep. The binder in the crypter binds every file, and with the assembly changer you can clone a file as well. And it also has an icon changer.

I use BS bot and its Fully FUD since 2 Days. you can see the AV monitor.

Use Mixxed+Inject Process(Change Name)+Statrtup+ No Delay + Icon Change(Make sure u download free icon packs from internet an d use it) + Cloud Encryption = FUD

If its not coming..then your BS bot settings are somewhat not good...try to chaneg the seetings..I used .net crypter settings option. And try to make 2 builds with same settings but different name and MUTEX.

Then try that with Chronic Crypter. Spend 15 mins trying every options at Chronic and u will get FUD. Its a very good Crypter :)

Exactly to fud your bot means you may need to play with settings but when you figure it out you'll have week or longer FUD's and you file will be VERY Unique and less like everyone else's :)

Can say with 100% confidence that this would be the easiest crypter to use on HF.

I had my doubts when i first bought this, but Banksy consistently releases updates which means 99% of my servers are FUD :)

The support team are quick also to reply back with any issues you are having :)

In my opinion its well worth the money.

Keep up the good work Banksy

The RAT doesn't work with the crypter. Yet.

I'm going to rebuild my PC. Like, rearrange the wires and everything, because it's just a mess. I'll be offline for a while. Possibly an hour or two.

Guidelines for FUD Crypt

- Code #1. Click Normal Under Key.
- #2. Click Generate Button. 7-10 Times
- #3. Click Delay Startup. Set it between 2-5
- #4. Click Assembly
- #5. Click Random 7-10 Times.
- #6. You may select Icon.
- #7. Build File
- #8. Any Encryption. Test for FUDS :)

Guidelines for Scanning

- Code #1. Open Chronic Crypter
- #2. Select Scanner
- #3. Select Check 2 (right hand side of popup window)
- #4. Select Login (right hand side of popup window)
- #5. Select Check 2 again (Same place to ensure you are on the right page)
- #6. Select Browse on page.
- #7. Select File in Windows BOX.
- #8. Select Ok
- #9. Move Mouse slightly right to click scan button
- #10. Page will flash/refresh scroll down wait for results

Banks? - December 31, 2011, 5:47 pm

Update is coming along nicely! ?

For those of whom that would like to beta test, please PM me, and I will shoot you a beta build when I'm finished with it.

By the way, this is completely recoded, so this will be Chronic Version 4. :D

Also, if you PM me asking to be a beta tester, please include your license in the PM.

A little update;

- I just finished the binder on the new crypter.

- There will not be multiple encryptions any more. Why? It's simply a hassle, and too much code for something that simply provides a false security of the crypter being FUD. If it's not FUD with one encryption, then you shouldn't have to rely on other encryptions which will only last a few hours. So, I'm only going to have one encryption, so it can be easier for me to know when it's actually FUD, and easier for me to FUD it once, rather than with other again and again with other encryptions.

- Everything else is coming along very nicely. I've had a few mishaps, but I was just over-thinking things. ?

Banana_ - January 1, 2012, 4:14 pm

For those you cannot get a FUD outcome: http://scan4you.net/result.php?id=45db4_142c59

Randomize the key a few times, use an icon, select a different injection process, make the startup information not have the word update in it, and clone a legitimate windows file.

These were the things I did and I achieved a FUD file.

I have had this crypter for a couple weeks now and I have to say that I enjoy using it daily. The files I have crypted have, for the most part, been FUD.

If you need a reliable crypter and don't care about the .net dependency, then get this one!

Not my job to deal with the SKID kids who steal shit

It saddens me to say this, It came as quite a shock to me but it seems that Banksy will be ENDING Chronic Crypter, to make sure all customers get their JUST money out of the crypter Starting the Day he is UNBANNED in 5 days, he will support CHRONIC for 30 days. At this point he will cease support.

He's had enough of Crackers/Thieves and the members of the crypter who can't keep the Update files to themselves they are causing him to work over-time for your \$25.00 to keep crypter FUD.

I hope that he will change his mind and continue the project because that is the best thing for the HF community as this crypter is one of the best however, He says he done, He may or may not change his mind, make note of this if you purchase from this day ON you will only receive 30 days worth of updates and project will end

Re-read the ToS, Go ahead and complain to an admin they will not respond, the ToS of our product says we may change the product and stop the product at anytime if the coder wants to stop he's allowed to, 90% of crypters cost \$25.00 PER MONTH you paid \$25.00 for lifetime, there is no guarantee he is stopping support on chronic but it is 100% his decision and there is nothing SITE admins can do about it

This wouldn't even be a problem is people would keep their .EXE's to themselves not the crypted ones the CRYPTER.exe

Lmfao what's this like the 3rd or 4th time that the coder's threatened to "quit". I also like how you say this: Quote:SIDE NOTE: 6 more sales at cost of \$25.00 / 15.00 LR soon it will be \$35.00 / 25

Then you tell us the crypter's closing.

It's very easy to steal a my-avscan account. They stole mine back when I was using it for my crypter, when my first Scan4You account got stolen.

Hopefully, I can provide a few words of comfort for those who haven't had time to develop "faith."

Most of us have been subject to big promises/no performance, no-support, and straight up fraudulent rip-offs, that is the inherent nature of HF. So when there is a delay, people, justifiably, get nervous.

There are few I have worked with on HF that are as straight-forward as Banksy and Virus1. The product works amazing and is constantly being improved. When it is finished it will be worth the wait.

Some don't understand why is no eta, there can't be. Think about it, they are creating something that has to be new and unique or it will be detected. So how can you predict when you are producing something unpredictable? Remember, patience is a virtue!

Something happened to the crypter so it is beeing purged, ok.

The price will change.

There will be an update link.

So I want to ask since I did not send any PM:

If I get the free update will I receive the link? And How?

What will I do to crypt while it has been purged?

Lol you people that are going crazy need to just chill out :P

Here's a little news flash for you:
These sales on HF aren't done by teams of f'n professionals.
As you can see, it's two guys running this thing. A coder, and a seller.

Stuff like this has to be expected. They are (probably) doing the best they can to get it up and running because they obviously don't want to lose sales.
In the mean time... don't cry here about how you can't crypt anything. Go learn something... do something useful with yourself.

Banks? - January 15, 2012, 5:54 pm

No, there will be no charge to any new customers. Yes, I am doing everything in my power to get this update done. I just got my computer fixed, which took me a while to find what I needed at a local place (didn't wanna wait for shipping), but it's fixed. I need to do a couple more things with the client<->server connection I'm working on for the crypter, and there will be an update released.

Customers that have already paid will never, I repeat NEVER, have to pay a penny more than what they already have.

were u using stock fan?

id suggest just buying a cheap air cooler, if ur not OCing, u could easily get one for 30\$ and install it in 10 minutes :)

also, would this update be a good time to transfer my purchase to a diff OS? i recently installed an ssd, and reinstalled windows. i still have my old OS with Apokrypt on it, but i dont boot off that os.

so im wondering if this update will let me use a new HWID, (my ssd OS)

thanks, and i hope your cpu didnt die, that would suck.

Reset you uTorrent.

Also, if you guys are having problems with nothing happening, or it not crypting, then that either means:

1. There was a problem server side, and I most likely have noticed it, just retry it, and if it's not fixed then send me a message.

2. Your licensing information is incorrect, or there is a problem with the server recognizing your information. Again, send me a message for that.

Like, for example, I already fixed 2 problems the minute it happened, because I noticed something wrong on the server.

But I have a few questions:

How long will you keep working on this?

How long does it stay FUD on average?

Will you keep working on this and not go to other programs or re-make the program and re-sell it?
Because most members do that and it pisses me off.

When I open the file, I get load of information about a "binery" file. How can I fix this?

The Milkshake Man - January 19, 2012, 3:28 am

Hey Banksy.

I seem to be having a few problems. Virus tried to help me last night, and did a very good job troubleshooting and whatnot, but he ended up saying "I have no idea bro..." and to ask you out about it.

He seemed to think that the only thing that could be causing it is some kind of anti-malware module you have now that doesn't let the program run if the computer is infected. I formatted/restored to the factory settings my computer last night, so I don't think that is the problem.

Any ideas?

The Chroinc V4 Application doesn't open, or do anything. I get a process called "Chronic V4.exe", I think, but that's all. I got the link grabber, the zipped folder, etc.

I had just formatted my computer the day before. Its the same one that the previous versions were on. I installed the .NET 4.0 framework, and Virus stayed on Teamviewer with me for about 20 minutes, but he couldn't fix the problem and said to talk to you about it.

What do you mean like that?

Norton (with Sonar) is on all of my families computers. I haven't tried recently, it bypasses it the first time but if you have startup enabled and they reboot it won't?

Sorry, not really understanding that ^_^

It was soooo close to making Hostbooter FUD...It got 2/36 damn :(everything else like my RATs are FUD though =]

The Milkshake Man - January 19, 2012, 7:12 pm

COD, it just took me 3 tries to get a keylogger FUD. You have to play around with the settings a bit.

It was 5/35, then 1/35, and then 0/35. From my experience, it'll stay FUD for at least a week, which isn't a problem ;)

I think what dephx is trying to say is that he wants a picture to pop up prob to make them not suspicious etc.?

Since i see hes already stated he tried using your binder maybe since its your program you should try fixing that I was about to buy it but i need one that has a working binder.

The binder works just fine.

He's attempting to bind BlackShades 4.8 one of the most UNSTABLE bots to.. a .jpg..

Blackshades was good when Xvical ran it now that BV1 has it, it's gonna die

You have 24 hours to remove the rep, After which time I will begin a suspension of your license until such time as you feel the need to stop acting like a child and be a mature adult and understand we all have lives that are more important then HackForums.

In response to your question our Crypter is FULLY compatable with BLACKSHADES

however it is almost IMPOSSIBLE to bind a .net rat that has been crypted with a C# crypter to a .JPG or .BAT file as they CORRUPT one if not both files, I stated I didn't like blackshades in the thread, I didn't state that it was blackshades fault. However it appear you arn't exactly as VERSED in the ways of RATTING or Crypting so I'll give ya a POINTER before you decided to act like an asshole to someone maybe you should choose to talk a deep breath and realize when I have 66 pages of people SWEARING my support and or product are ABOVE Expectations and SWEAR up and down that we are the most legit members on HF maybe you should take a step back from the keyboard and ask yourself if you REALLY wanna do what you are about to do, Because honestly by our ToS I can cancel your license and KEEP your FUNDS however unlike most HF skids we arn't asshole so this is your ONE and ONLY chance to remove your rep. There is no guarantee. Some people have reported issues with Virtual Machines, and some people (ex: maizollo) have reported it works fine. I, myself, have not implemented any anti-VM mechanisms in the crypter so I don't see why it wouldn't work to be honest.

Uploaded funds to Scan4You. The scanner will be working for the whole time in between the current expiration, and the new month of scanning.

Boosh :-)

Just wondering, if someone uploads to VT, is it possible to figure out who it was?

I was perm banned a few months back from another service on another site, and they said I was scanning with a distributing AV (which I wasn't). Is it possible to trace scans?

That's part of the client<->server connection I have. I can trace the scans.

That's what I'm beta testing actually. I'm working on getting the file to inject into itself.

The Milkshake Man - January 25, 2012, 7:24 pm

Hey Banksy, really stupid question...

Does this work for Macs? I'm thinking about getting one, and I researched a bit and found that not all programs are compatible both ways, and if they aren't, you have to run on a virtual machine emulating Windows, but it sometimes doesn't work, blah blah blah, etc.

Banana_ - January 25, 2012, 7:35 pm

The crypter itself and the outputs can only be run on Windows. If you want to use on a mac, your gonna need a virtual machine.

I'm pretty sure Banksy blew shit at someone for saying the crypter doesn't inject into vbc a few pages back, saying something along the lines of "For the last fucking time, my crypter does not inject into vbc.exe"

The crypter does not inject into vbc, however, it does not inject into itself at the time being. And sure, can you please send me the sample exe?

daemon10 - January 25, 2012, 7:44 pm

I am just sick and tired of seeing all these C#/VB.NET crypters that cant crypt a damn thing except blackshades, cybergate and kids stuff like that.. especially when i see ProteC#tion crypter jacking up their prices like its some leet shit.. and its just like any other .NET crypter. Keep it simple find a good method so it works with anything like i said ill show you a sample of working C# Crypter that crypts anything and works flawlessly so yes i am sorry but i must say this its poor coding and copycat who ever is still using this damn lame method. Anywayz

<http://imageshack.us/photo/my-images/59/72675108.png/>

So this C# crypter clearly shows that it is possible to code a method that executes into memory the malware.. So until i see crypter that does it right and can crypt anything u throw it.. these vbc crypters will remain garbage for me. ProteC#tion claims they can crypt ngr? Hahah give me a break they need to remove that crap from their thread.. sweet is just there to collect fast money whith jacked prices like its some C++ (5kb) stubs lo.. but i guess as longest there is 14 years old they will be buying it to crypt their Bl4ckSh4d3s and watch their gfs On ratz..

And banksy i would really like to see you crypt Ngr, ZeuS/SpyEye banker and so on but it is not possible. Crypters need to inject into memory ,)

I am not trashing your thread or anything like that i just want some of the HackForum Members to know what they are buying and so on to know little bit more about this vbc method and every single .net crypter thats being sold on HF that is copycat.. when u look at them that is simply enough

(Jan 25, 2012 08:42 PM)?anksy Wrote: [\[CITE\]](#) The crypter does not inject into vbc, however, it does not inject into itself at the time being. And sure, can you please send me the sample exe?

Banksy give me the file that you want crypted..

For example: Some file that does not work with your crypter and i will crypt it with this C# crypter.. just to show you that there is a method if you know how to code properly.

Banks? - January 25, 2012, 8:14 pm

It is not poor coding, it is the method. Which is why I'm working on a method to inject into itself. Which, in turn, will hopefully make it crypt those bots. I will see though.

daemon10 - January 25, 2012, 9:42 pm

It's injecting into the stubs memory. I believe I am on to something here. I have gotten it to inject into itself not just native files, but also .NET files. Could you send me a bot or something if you have one?

Daily - January 25, 2012, 10:53 pm

I am not talking about lame RAT's for 14 year old kids. I am talking about more pro stuff here.. if he made it work with Zeus, SpyEye, Ngr, Irc Bots, C++ Malware then only thing is left to congratulate him only few have coded it right in net.. so we shall see

Yeah, I'm a Sophomore.

News on the update:

This is really confusing me and I don't know why it's not working. What I had with my RunPE to make it inject into itself was somewhat unstable, but I'm working to fix it. However, I do not know why what I'm doing right now is not working. Needless to say, I'm a bit frustrated.

GIGABYTE GA-Z68X-UD3H-B3 Motherboard - A bit slower booting up than my old motherboard. I upgraded to this one for SLI.

i5-2500k @ 4.5GHz 24/7 - Amazing.

Cooler Master Hyper 212 Plus - One of the best purchases in my build.

SLI GTX 570's (2-Way) - Amazing. I have 3 though, one's broke, and newegg wouldn't accept the RMA.

16GB 1600MHz RAM - Amazing, but I only bought 16GB because I thought my original 8GB was corrupt.

Crucial M4 64 GB SSD - Meh, it used to blue screen a lot.

1TB Western Digital Caviar Green HDD - Shitty

Raidmax RX-850AE 850W PSU - Amazing for me.

Rosewill Challenger U3 Case - Meh

i know why i get file damaged !
it hapend even now , after update .

SOLVED THE ISSUE WITH FILE CORUPTION !

the problem is in the key that i generating !

if i use the standart generated key like:

"????????????????????????????"

i will get file corruption !

but if i will use only "eng" char set like :

"ZcFvoleV6qcXMOpgkCs6CNi2xiUHcAJYjhpHKAp2sX6kQcTM8d6tKepG_Da"

it will be fine .

Good Luck guys ! <3 u all

we know 2 license banned for VT uploads :)

shapka - February 6, 2012, 12:31 am

good to hear !

any timeline for update btw ?

thanks.

miscaware - February 6, 2012, 1:21 am

I don't understand why they would have to upload to VT when there is a free scanner built in.

shapka - February 6, 2012, 1:57 am

lack of knowlage mb ..

it actually can be alot of reasons , the user is suspected the file to be infected and upload it to VT .. thats why i like to bind my files to the big one ... more than 50mb.... so the user can't upload them to VT or other shitty scanner...

Banks? - February 6, 2012, 4:30 am

Update will be out today when I get home from school. ?

shapka - February 6, 2012, 1:32 pm

so no updates today ?

thanks for answer.

at this point I'm convinced this kid is flaming our crypter no one and I mean has you bad luck with fudding at all!!!

javaPro - February 6, 2012, 5:23 pm

To be honest, I am getting 4/37 aswell, thats with an icon, cloned assembly, and inject into scvhost. It is undetected by the common av's though (well, ones I know like esset etc)

Dude I have supported this crypter for months...I know exactly what file settings to use to FUD DC and BS which I have done many times before with this crypter.

EDIT: I have no reason to flame whatsoever, if someone can say that they FUD a BS 4.8 server I will more gladly remove my post and apologize.

As you can see I am not the only one.

shapka - February 6, 2012, 5:52 pm

yep ... some shit hapend with bs ... previus update was same thing btw...

Bansky , can you check wtf is goin on with blackshades?

agcore - February 6, 2012, 5:54 pm

its 3/37 for me... i am crypting lstealer.... i have tried all the different combinations...

shapka - February 6, 2012, 6:02 pm

Bansky , Virus1x i can provide TeamViewer with bs rat xyz logger if needed.

Banks? - February 6, 2012, 7:25 pm

I'm getting 0/37 with darkcomet.

http://scan4you.net/result.php?id=3ee54_17r05c

And sadly I don't own BlackShades so I couldn't test it.

old_boy - February 6, 2012, 8:19 pm

I am also getting 4/37 with BS. Tried all the settings and it's the best I can get.

EDIT...

Banksy I can pm you a BS server to see if you can get a FUD result.

king0demons - February 6, 2012, 9:10 pm

Ok, before I post a results for Blackshades server against element scanner, would someone like to show me now to get scan4you to give me my free scans? Last time i posted element scanner results virus complained about it. The results btw are 4/37 so my guess is either false positives, or Blackshades needs to crypted differently than dark comet.

Banana_ - February 6, 2012, 9:12 pm

Use the scanner built into the crypter. I can get a BS scan later, gonna redownload it and stuff.

Umm... Your doing something wrong. It is working fine for me.

BTW, I would do a BS test, but the blackshades website is down.

(Feb 7, 2012 04:22 PM)miscaware Wrote: [\[CITE\]](#) ^^ I get same result as kingg0ddemons with BS. It isn't a file name issue either, I scanned after a recrypt of the same server and the name "Ice Cream.exe" with the exact same results.

Banks? - February 7, 2012, 7:06 pm

I know what the issue is, but I have no idea how I'm going to counteract it.

It's an issue with the size of the file, specifically the resources (where I store). I'm going to either have to figure out some way to around it, or a completely new method, which may take some time.

king0demons - February 7, 2012, 7:13 pm

Don't worry, you are not the only one that has run into the issue, do you think a file pump would help the issue?

Banks? - February 7, 2012, 7:19 pm

No. The problem is it is too big. I wish it were detecting it being too small, then I could just pump it like you say, but sadly this isn't the case. ?

king0demons - February 7, 2012, 7:33 pm

You are dropping the size when you crypt though, I don't see how that is causing it, but then again I don't really know much about this subject.

example.

70kb file will become 280kb adding 210kb for stub..

a

210kb file becomes 420kb file

they note the size difference and flag it as a stub encryption packing method

KRAZY file size

Well the big companies clearly don't do that, or it would be more than a 4/37 result wouldn't it?

Uhm no that's not what's happening. The detection is 'Kazy', not 'Krazy' also.

What is happening is it is detecting the size of the bytes in the resources. I think I have a method to bypass this, but not certain yet.

king0demons - February 7, 2012, 7:48 pm

Detection issues/questions are never bashing the product unless it's repetitive, and already been

said multiple times, or said in a aggressive/threatening mood. I'm working on the crypter right now, and like I said before I think I have a way around the detections. However, I haven't had much time to work on it today, but I'm working on it now.

thank you for your answer

now i need to wait for the seller to be online

shapka - February 11, 2012, 8:34 pm

Bansky , good job mate :P
i tried 3 different cryptors ...
and the Chronic is the only cryptor that do the fuckin job...

It should be working, but to be completely honest I don't have a file big enough to test, but I thought I fixed it.

javaPro - February 12, 2012, 2:39 pm

Well the file I am binding is 30mb, and I have always used the same file in the past with no problems. Its only the latest release which seems to think its too big.

Banks? - February 12, 2012, 2:48 pm

(Feb 12, 2012 03:39 PM)javaPro Wrote: [\[CITE\]](#) Well the file I am binding is 30mb, and I have always used the same file in the past with no problems. Its only the latest release which seems to think its too big.

I've tried a 7MB file, and that works... Whats the exact error you are getting?

javaPro - February 12, 2012, 3:18 pm

The error pops up in a dialog, not in the crypter. It states that a System.OutOfMemoryException was thrown

Banks? - February 12, 2012, 3:28 pm

Yeah. I know why this is happening, but I'm not sure what I could do to fix it.

LiGHT™ - February 12, 2012, 4:36 pm

Crypter is currently 0/37, good work on the 2 updates today

javaPro - February 12, 2012, 7:04 pm

I have just tested binding a file just over 7mb, and I get the same error. So I would imagine that 7 is the maximum bind size. Is this something you think you may be able to fix?

Banana_ - February 12, 2012, 8:20 pm

http://scan4you.net/result.php?id=bb64b_18f12f

This crypter is really awesome, just wanted to make a suggestion.

The persistence on the crypter is extremely low. All it takes is someone to uncheck the registry on startup from msconfig and they disable the bot. If you can figure out a way for it to be more

persistent I'm sure people would not mind paying even more.

Also, if you can hide the registry and process would make it even more killer.

When were you getting 4/37's? Was that a while ago, or more recently? Because with the latest update I believe I fixed that knock on wood permanently.

I'm still not sure how I'm going to combat this. I'll try my best to fix it, but the method I use now has to use a lot of memory. I'll try and think of something though.

You most likely don't have .Net 2.0 on your VM.

Alright, little news update.

I semi-fixed the problem with crypting files that are really large (example: 30MB), but it only works if you have 64-bit. Because of my method, I use really really large strings in memory (I can't do anything else to stop this), and it ends up needing more memory than a 32-bit application can use. Don't worry though 32-bit users, if you don't crypt large files, then you're fine.

Copenhagen Wintergreen - February 16, 2012, 6:01 pm

yeah I do but I will try again and install it again.

I think since you dont allow us to uncheck injection and hostbooter auto injects it screws up the server.

Can you add the ability to turn off injection maybe?

Thanks!

Turning off injection would make it scantime only. The only way to make your bot runtime, is to have injection in the crypter.

Try changing the settings around. Hit generate a few times, change the injection process, use a different, icon, etc.

But I think this is what it is keeping it from crypting. Since chronic doesn't have many options and this is the only thing it does have that you can't uncheck it has to be the issue with it.

Banana_ - February 18, 2012, 2:55 pm

I don't think the crypter itself got hacked. Someone simply attempted to spread something on the forum via Bansky's account.

From what I read, everything is gonna be alright.

Banana_ - February 18, 2012, 4:47 pm

I don't think there was any RATs involved, it only was a stealer.

This is an anubis report of the "updated" Chronic Crypter file:

http://anubis.iseclab.org/?action=result&task_id=1f8943708239eb7a40dddab7ed34ecc91&format=html

After running the file on myself, there were no new startup processes. A total of four files are dropped into the temp directory:

mpv.exe

mpv.txt

wbpv.exe

wbpv.txt

MPV is a file that is used to recover local chat client passwords. WBPV is a file that is used to recover local browser passwords. The two text files are where the data is stored.

Do not take my word for it, but unless you don't save any passwords, you could have had your login information taken.

Yes I got hacked. It was by the same person as well I believe. I was having a battle for my MSN account for a good 20 minutes, because someone kept logging me out of my MSN. The only thing I found was that the person's PC name was "PATTE-PC", and he was using a proxy from New York. There was also another person, who was most likely his friend, that was either in on it or helping him, and that person's PC name was "1PC", but that's the only information I could get.

Banksy didn't do it>what would be his motive? To kill his own reputation and cut off his own funding? Selling this is brilliant because it is legal. Do you think all of a sudden he is going to rape his own customers, do something illegal and go to jail?

And I did find the added, infected files, I am going to see if anything is in the run registry.

Do whatever you would think would help you be rid of whatever may be afflicting you, be it a RAT or password stealer.

Clearly Banksy wouldn't want to ruin a good source of income for himself by doing this. I would have no problem with him taking a few weeks off to figure this out.

Good luck Banksy. Hope everything comes out good.

Around that time is the last time I even used anything like a RAT/IRC Bot/HTTP Bot. I was going to upload a version of the crypter that does not update, and would not be infected, but that would be impossible. The reason why is because since I don't have my .Net Seal account anymore, my server cannot access the database, thus rendering the whole crypter unusable at this point in time. I wish there were some way I could stop all updates to people, but I cannot. The only way I am able to get across to my customers right now is through this thread. I am very sorry for any inconvenience, and I will get this situated as soon as Aeonhack responds to my PM.

the problem is this happened twice , and banksy is very professional so he cant get infected twice from the same person , im not saying u infect the crypter , but thats what we can see, u eve did not clean your pc and u now ow to do that very good , third thing is u give us some information that cant be getting for example u said u get the pc names , how u get them ? i think from msn when it give u that some one connected from another place and they give u name of the pc

forget all what i said , the very important thing is whats happened is happened , and most of chronic crypted are infected , by stealer or any thing so the is lot of accounts stolen and may be no-ip that each one have lot of slaves

we hope every thing is fixed , and for the members , to just make sure that banksy is not infected his crypter , think about it if he wanna do that he can do it without those problems he just bind stealer with update , but its not from this kind of peoples , he is trusted and legit

I had everything on my computer cleaned. I believe the problem was, I was testing the update for Chronic and then it did what other users have experienced, it went in an update loop where it was downloading the stealer or whatever it was. I didn't think they would get into my .Net Seal account, and for that I am very very sorry. That is nothing short of my fault, and no matter what I say, there's nothing I can do about it at this time, no matter how much I wish there was.

Alright I'm gonna make an official statement and this can end.

Until further notice no one is to RUN CHRONIC Crypter, Net-Seal is cracked it's a virus.

Until further notice accept no files from Banksy's MSN or PM's because it's no him

Under NO CIRCUMSTANCES did banksy INFECT ANYONE he didn't leak it he didn't do it, Trust me he makes tons more money off selling his crypter and has 10x the fun then being an asshole and trying to get anything of value from his customer that he can simply buy with Crypter Profits :)

If you have updated and run it and believe you are infected, you can use the HJT part of HF, However my Suggestion is simple. Blow your PC away (REFORMATTING) Start over, I do it once every 6 months because either A. I get paranoid or B. my pc bogs every so slightly and it bothers me

This is an offical statement.

CHRONIC WILL NOT DIE THIS DAY!

Chronik - February 18, 2012, 11:57 pm

I updated my crypter a few minutes ago, but I checked my startup, temp folder, and application data and nothing new seems to be installed. So I think I'm fine. I deleted the chronic crypter EXE and usually if it was a virus I wouldn't be able to delete it.

Anyways, my RS Account got hacked a month ago and I lost 150m, and the IP that logged into my account was from New york..

Are you telling me that I was hacked because of your crypter? Because I haven't ran any programs that could have infected me except for yours.

If it was I'm gonna be pissed the fuck off because it took me a month to make that RSGP back..

Until further notice no one is to RUN CHRONIC Crypter, Net-Seal is cracked it's a virus.

Until further notice accept no files from Banksy's MSN or PM's because it's no him

Under NO CIRCUMSTANCES did banksy INFECT ANYONE he didn't leak it he didn't do it, Trust me he makes tons more money off selling his crypter and has 10x the fun then being an asshole and trying to get anything of value from his customer that he can simply buy with Crypter Profits :)

If you have updated and run it and believe you are infected, you can use the HJT part of HF, However my Suggestion is simple. Blow your PC away (REFORMATTING) Start over, I do it once every 6 months because either A. I get paranoid or B. my pc bogs every so slightly and it bothers me

It could be your A/V not trusting the file, or the crypter not opening because of anti debug (not sure if it has it) but some a/v will attach itself to software after launch to make sure it isn't malicious, find that feature and tell it to ignore the crypter.

Can you guys tell me if the server is working for you now?

king0demons - February 24, 2012, 6:13 pm

If by server you mean the authorization server then yes it works. Then again I wasn't one of the people having issues with it.

m3llomatt82 - February 24, 2012, 6:18 pm

Still not working. Appears in the task manager and after a few minutes the same message pops up. :(

Try again. I turned the firewall off now. If it doesn't work this time I'm gonna ask the datacentre what the hell is going on.

m3llomatt82 - February 24, 2012, 6:43 pm

Well, let me make sure I am doing this right. I deleted all the old versions of chronic, dlld is from the grabber link, after extracting all files I click on the chronic V4.exe link and it shows up in the task manager until the communicate message pops up. Still no work.

Banks? - February 24, 2012, 7:26 pm

So wait, the link grabber is working but the actual crypter isn't? Ah, then I can fix that. Hold on. ? I believe I fixed it, can you try again?

What bot you are using.

What settings on the bot you are using.

What settings on the crypter you are using.

I tried with Darkcomet 3.2 and 5.0. I am using everything unchecked on the darkcomet server except having the keylogger enabled. Then using chronic crypter as a startup "winini.exe" and having it inject into "winlogon.exe." I crypted this with the same settings yesterday with no issues.

I have always used UPX and it hasn't caused a problem for me, USB spreading has, but not UPX, but some crypters handle it differently I guess. Pretty much try to keep the settings on the RAT as minimal as possible.

The video is kinda out dated, would you like me to make up a new one for you?

Guys what setting are you using on dark comet to make it fud?

Now I m 4/37 and can't get lower than that.

How long do the stubs stay FUD usually, don't hesitate to be honest, for \$35 lifetime, Im going to get this regardless just to check it out. I was wondering if I pay the \$35 and "donated" an extra 20 or so a month, if I could get some private stubs. ;)

king0demons - March 3, 2012, 11:37 am

For those of you not getting FUD on results with Black Shades, try using a different filename, no icon, and no assembly changes.

Virus1x - March 3, 2012, 1:51 pm

Mine had startup no icons no.assembly and random file name .net settings on BS

m3llomatt82 - March 3, 2012, 2:07 pm

I am using Dark Comet. Within DC I have No FWB. I do have Module start up modified and checked. Persistence and date change checked. No icon. I compress with .net32. This has always worked. On the cryptor, I have a custom made, not previously used icon. I have a modified unique startup file and the Key is Windows Standard winlogon injection. I have iexplorer cloned and no binds.

king0demons - March 3, 2012, 4:28 pm

it has a .net framework 2 dependency I think, but it is still good, the stubs are pretty small I don't know the exact size.

Banks? - March 3, 2012, 5:57 pm

I've just made a few stability updates to the crypter. Shows a connecting screen so you can now see what's going on and if it can't connect or what not, and fixed some of the errors that showed up when you started the crypter.

Ok, in testing upx compression on blackshades does corrupt the server using chronic crypter. Sorry for the mix up, I use another crypter that you have to use upx that is probably where I got mixed up at.

Yeah I know it's not working. I have everything fixed, except the crypter itself will no longer update. I'm not sure why yet, it might actually be a problem on the licensing side, but I'm looking into it.

Fixed the crypter! It took me like an hour and a half to find out what was wrong, and why it was wrong (one of the stupidest reasons ever; +1 for .Net!), but it's fixed. Everyone should be able to just run their last version of the crypter and it should work fine, however if it doesn't, than redownload the link grabber from the thread.

Don't name it winini, and change the default startup options that are in the crypter. AVG detects them.

As for the Kazy, can you tell me what the detection is without using UPX on your server? Or are you already not using UPX?

I'm trying my best to get the detections off for blackshades. It's something to do with the size. It doesn't like files that are around 400~KB, anything higher or lower is just fine. I don't understand it.

same probleme there...
the inbuilt scanner says 4/37 (but bitdefender ok)

but it got detected by bitdefender on mediafire ?

just for information i use DarkComet 5 as rat

Copenhagen Wintergreen - March 6, 2012, 3:42 am

Could someone help me out with this link grabber iv been stuck with the older version for 5 days
now..

kaiz - March 6, 2012, 6:50 am

just random cmd-windows are popping up when i try to start the crypter, bcs of the update !

Bitdefender's scans have never worked properly on any scanner. If you have the detection "Kazy",
then that's the same detection that bitdefender has.

Make sure the file is named "Chronic V5.exe".

Leechy - March 6, 2012, 12:57 pm

V5 isnt fully fud :o (blackshade user)

king0demons - March 6, 2012, 1:51 pm

I am getting 4/37 results with everything defaulted, and no icon.

Oh I want to know the secrets of the crypter magics.

Portland Timbers - March 6, 2012, 7:57 pm

Ugh, can you somehow get this to work with hostbooter? Or change the program to VB6 or C++ because I spent money on this thinking I was going to get a crypter that works with hostbooter :(

It didn't

You want us to completely re-code the crypters lang.

really?

you realize how absurd that request is?

Copenhagen Wintergreen - March 7, 2012, 5:00 am

still waiting on a response on how to get this link grabber to connect to server....

How are the FUD updates coming along?

Portland Timbers - March 7, 2012, 7:24 pm

Can I sell my account? I loved this tool but since I use hostbooter and this doesn't work with it (crypting wise) there is no need to have it anymore. I was wondering If I can resell my serial to someone here? If I can please tell me the steps required to do it.

m3llomatt82 - March 7, 2012, 8:22 pm

Anybody having success crypting DC or CG? If so what are you doing? I can't get below 3/37. Thanks.

You are authorized to re-sell your license you are required to pay a \$5.00 PC CHANGE HWID RESET Fee, which is payable to me at any time.

With this fee you are allowed to resell your license at which point you will void your right to ever recover this license if the license is ever contested you both will be banned from using it, if at any point user chargesback thats on you, he will keep the license we will not disable the license because of a chargeback reselling your license is 100% at your own risk.

Fees aren't associated with selling their license.

In order to finally rid away these detections, the only thing I have come up with is to completely recode the crypter. Unfortunately, that will take some time, but it will be much better in the long run.

Hopefully the update doesn't take too long, but Banskys is a beast at this.

Virus1x - March 8, 2012, 11:37 am

Only reason that this update is taking so long is because of the most random detection on the size of the encrypted files

Flacon - March 8, 2012, 1:11 pm

banksy was born with a xeon processor and a gold platinum graphics card just know that his a awesome guy big vouch for him no just cause his crypter is good but cause his a nice guy

Well no it doesn't, but I haven't paid the VPS bill, mainly because I just had to get rid of the last of my money. Sales have been really slow lately.

It has come to my attention that Virus1x has sold (at least one) license to another user directly to his paypal, and not through Plimus (the site has the payments go directly to me). He is no longer allowed to sell the crypter, and is no longer on the support team. I will be having staff close this thread and/or transferring it to me, if I can.

Versace - March 13, 2012, 3:39 pm

Damn!

That's a hit right in the back Banksy.

Hopefully everything goes well on the next thread, I will support you always :D

I purchase your product by Plimus, but I have not received the licence number and the name too.

Can you answer to my PM please i really need to it.

Thanks.
