Thread: [\[TUT\] Capturing passwords with your Ipod Touch/Iphone \(With pictures\)](#)

madness303 - December 12, 2009, 5:11 pm

Hey guys.

I'm going to show you how to get passwords on any wireless network you are connected to by using your jailbroken ipod touch or iphone.

First, let me explain how it works:

Almost every wireless network operates from a router, which routes data from the internet to all the computers that are connected to it. It sends packets only to the computer that requests it. With the method i'm going to show you, we can receive all network packets originally meant for the router. This means we can view sent and received data, including passwords, from anyone in the wireless network. This is called packet sniffing, and can also be done with a computer, but your iphone/ipod touch is portable, so you can do sniff packets anywhere, and not be noticed.

Ok, on to the actual tutorial.

we will need to download a few things first:

1:The latest ipod touch firmware (3.1.2):[Firmware 3.1.2](#)

2:Blackra1n: [Blackra1n](#)

3:Cain and abel: [Cain & Abel \(from official site\)](#)

4:Winscp: [Winscp \(official site\)](#)

And 3 other program which you need to download directly from your ipod.

first: jailbreaking

I will only show you how to jailbreak your ipod touch for now, if you want to jailbreak your iphone you should read through the posts on <http://blog.iphone-dev.org/>. The programs we'll be using will work on the iphone as well.

In itunes, go to the ipod touch menu and look for the 'restore' button. Click this button while holding shift and it will open a browser. Navigate to the firmware 3.1.2 you just downloaded and open it. Restoring will take a few minutes. When it's done restoring, exit itunes and open up Blackra1n. Press 'make it rain' to jailbreak and wait until it's completely done.

Second: installing programs on your ipod touch/iphone

On your jailbroken device, open Cydia. This is the program that is installed on any jailbroken device. In the search tab, search and download 3 things:

1: Pirni (the actual sniffing program), 2: Mobileterminal (where you run pirni) and 3: OpenSSH (To transfer the captured packets to you PC)

Once you have those three installed, you are ready to sniff.

Third: sniffing

On the ipod/iphone, connect to a wireless network you want to sniff on.

In the settings menu go to Wi-fi, to your chosen network, and then find the tab that shows your router number and write it down.

http://img268.imageshack.us/img268/2711/img0013j.png

Now, open mobileterminal.

to start sniffing you have to logon first. in the terminal type: 'login' and return, then 'root' and return, then 'alpine' and return. root-alpine is the standard login for ipods and iphones. Now that you are logged in and have permission to use programs with the mobileterminal, start pirni.

type in this command: pirni -s "router address" -o "filename".pcap. fill in the number you just wrote

down for "router adress" and name the file whatever you want for "filename" (don't forget to end with .pcap).

you should start to see the number of packets captured increase. This will be higher if it's a busy network than a network with only a few pc's connected.

[img]http://img130.imageshack.us/img130/5379/img0014d.png[/img]

Once you are done capturing files, swipe your thumb up and right in one movement in the terminal and the sniffing will stop. Now we will open the capture file with cain & abel and find passwords.

Fourth: Collecting passwords.

On your computer, open Winscp. It requires a ip adress and a username to logon. In the IP address bar, fill in the ip adress you see in the settings menu of you ipod (NOT router address, but IP address). The username is root and the password is alpine. leave the other as they are settings and connect.

The file you captured earlier will be in the directory /private/var/root.

Drag the file to a place on you computer where you can find it, and now open Cain & Abel. In Cain & Abel Click the 'open' button on the top-left side and browse to your .pcap file. Now navigate to the sniffer tab, and then to 'passwords' on the bottom.

[img]http://img188.imageshack.us/img188/9862/capture2pa.jpg[/img]

If you sniffed long enough, you will see alot of http passwords, some ftp, pop3, telnet and some smtp passwords. A lot http passwords are not actual passwords, but just misinterpretations by cain and abel.

On a busy network i got a few passwords in an hour, but maybe you will be more lucky?.

i hope this tutorial was helpful. If i made any mistakes (it IS my first tutorial), or if you get any errors, tell me and i'll help you. oh yeah +rep as well. Thanks!

South Park - December 12, 2009, 6:03 pm

Nice TUT for someone with 7 posts! Im sure many members will find this information helpful! Thanks!

?trauma - December 12, 2009, 6:06 pm

Awesome, I oftenly hack with my touch ?

Just change the open SSH pwd cause teh regular pwd is alpine and worms attack iphones with openssh and this pwd :D

Cyb3rh4xx - December 12, 2009, 6:43 pm

testing as we speak, if this works i will freakin love you! lol

iv been tryn 2 find some way to do this! Really really hope this works!

also id like to know if u could crack wep w/ the touch... gotta look into it! lolz

?trauma - December 12, 2009, 6:45 pm

I'd use blackra1n to be honest, much faster & easier

ovidiu31 - December 12, 2009, 9:16 pm

super! i iwll try it soon maybe tomorrow i will give you guys news

South Park - December 12, 2009, 11:12 pm

(Dec 12, 2009 07:45 PM)_trauma Wrote: [\[CITE\]](#) I'd use blackra1n to be honest, much faster & easier Haha yeah!

Plus its the only jailbreak app that works for my 32GB iTouch 3rd generation!

madness303 - December 13, 2009, 2:40 am

I meant to say Blackra1n, not redsn0w. Sorry if i confused you ?

It's also impossible to crack wep with the ipod. The wireless card on the ipod would have to be put into monitor mode, wich can't be done yet, and if it could the cracking process would drain the battery of the ipod before you were done.

Limboland™ - December 13, 2009, 5:33 am

it's very nice but old !!!!!???

insomaniacal - December 13, 2009, 5:37 am

Hehe, I do this every time I walk into Barnes and Noble. I did this once when visiting a college campus as well, left my I-pod in my car, and came back a few hours later to reap the rewards.

The End Gamer - December 13, 2009, 5:40 am

Awesome Tutorial madness303

Good Job For A Member That have 9 Posts

madness303 - January 2, 2010, 3:50 pm

Does anyone have feedback?

aka bump

madness303 - February 15, 2010, 2:28 pm

Question:

My ipod threads got a lot more views when they were in the hacking tutorials section. The only threads on this board are about jailbreaking your ipod touch and how to install ipas, which is in no way hacking. It just feels like the people on this board are not looking for the information in this or my other thread.

Can i or a mod move it to the hacking tutorials?

DZEAGLE - February 15, 2010, 4:49 pm

Great post ! It will help a lot of guys ! ;)

Pilopew - February 16, 2010, 1:54 am

Before asking a mod to move your tut, you better remove you"+rep is appreciated" Its against forum rules. Otherwise, good tut. Gonna try it, who knows. Also, I thought wep could be cracked by using iWep?

sfdevine7 - February 16, 2010, 2:23 pm

problem, i do everything like you said and it all works, but when i go into the folder in WinSCP my file doesnt show up.

DAV3 - February 19, 2010, 2:49 pm

How big was the .pcap file?

Must've been like 2 gigabytes!

(Feb 16, 2010 03:23 PM)sfdevine7 Wrote: [\[CITE\]](#) problem, i do everything like you said and it all

works, but when i go into the folder in WinSCP my file doesnt show up.
Your just looking in the wrong spot..

You have to look in the same folder that you have pirni installed.
I think the default is like var/bin..
I think :\

Make sure you do the -o command
cause that saves it to a file that you can transfer over.

c0nd0r54 - July 12, 2010, 6:44 pm

Excellent tut and well explained to. :)

TheAxis - July 29, 2010, 8:27 pm

This is a very good tutorial, thank you alot ?

theiphonekiller - July 29, 2010, 11:13 pm

Mhm, very nice tutorial indeed! Gonna try it out asap.

Aeonhack Archivist - August 4, 2010, 6:51 pm

Thank you for this very good tutorial. Now they have a GUI version of the app out called PirniPro. I prefer this method though.

Sepultra - August 4, 2010, 10:44 pm

for JBing ur ipod/iphone then just visit www.jailbreakme.modmyi.com from ur device's built-in browser!
i.e. SaFaRi browser

and as for the TuT u can do this all al0n3 with an LaPtOp .. i guess?

1qaz - August 9, 2010, 5:51 pm

Great tut, didnt know that iphone had these capabilities!

xUser - August 10, 2010, 11:52 pm

That's a nice tuts, but i got no luck of getting anything. You might want to mention for getting the packets to type these command onto the Iphone mobile terminal -it's kinda throw me off when you said mobile terminal- i was typing these commands onto the winscp mobile terminal instead of the iphone mobile terminal. Thanks again man!

xUser - August 11, 2010, 10:22 am

where it says " private key files" what do I need to put there ?

ProXiDoS - August 11, 2010, 2:20 pm

Really interesting and nice stuff mate, great thread!

Og- - August 12, 2010, 9:20 pm

everytime i do that terminal thing it says command not found, i dont know what im doing wrong.

z†cq? - August 13, 2010, 12:20 pm

I know this is old, but I just found it.

Where the fuck is that Pirni thing? I can see only PirniPro. :(
Do I have to add any special source? I have hackulo.us, if I need this one.

Aeonhack Archivist - August 13, 2010, 9:36 pm

(Aug 13, 2010 12:20 PM)z†cq? Wrote: [\[CITE\]](#) I know this is old, but I just found it.

PirniPro is a GUI version of Pirni. You might find it easier to use as there are more user friendly options such as where to save the log to, what types of passes to sniff for (using regex), and you can monitor all packets sniffed in the GUI.

I like using it when I am short on time (I am at the library or some place for a short while), but if I want to leave it running for some time, I prefer using the Terminal version.

m0nk3y - August 14, 2010, 4:00 pm

lol like know lie i just did this,I cant wait to hit up this open network down the street,

madness303 - October 11, 2010, 12:43 pm

This thread is outdated, will edit soon.

"Sorry but you cannot edit your post. The Administrator has set it so that posts can only be edited within 1440 minutes of posting."

lolwat

edit:

Admin or mod, can i edit my thread now? Obviously it's more than 1440 minutes old.

AnonymouS12 - October 11, 2010, 3:22 pm

Hey man, I have some things to tell:

We can't see a router adress of a WiFi network we aren't connected to, so, we should connect to it first and

I also recieve Couldn't look up IPV4 network number and netmask for en0 error when trying to sniff my home WiFi.

phybe? - October 11, 2010, 9:00 pm

Neat tutorial. Never seen this before. Thanks for the share.

madness303 - October 19, 2010, 2:47 am

In cydia, go to manage > settings > and enable hacker mode to be able to download pirni (normal version)

moef - October 19, 2010, 6:33 pm

is this possible on a mac

Pilopew - October 20, 2010, 2:08 am

It says "within" 1440 minutes, wich means you'll never be able to edit this thread again, unless you buy ub3r or l33t. Just make a new thread.

(Oct 19, 2010 06:33 PM)moef Wrote: [\[CITE\]](#) is this possible on a mac
You can use KisMAC to crack the passwords of the network, and Ettercap to ARP Poison the whole. It's pretty difficult to get the setup working though, I haven't managed up till now.

bullzye xxx - October 20, 2010, 3:39 am

My terminal does not even work, sucha fail tbh

(Oct 20, 2010 03:39 AM)bullzye xxx Wrote: [\[CITE\]](#) My terminal does not even work, sucha fail tbh
What's a fail? Pirni or the fact Terminal.app won't run?

Pilopew - October 20, 2010, 4:01 am

(Oct 20, 2010 03:59 AM)bullzye xxx Wrote: [\[CITE\]](#) terminal app wont run and ive reinstalled it several attempts but im using ipod 4 with 4.1

There's been several issues with Terminal.app lately on the iOS 4 if I'm not mistaken, you should google it, but I think you actually need to download a patch to get it working.

Pilopew - October 20, 2010, 4:12 am

(Oct 20, 2010 04:05 AM)bullzye xxx Wrote: [\[CITE\]](#) Fml this just drains it what a shit fucking piece of crap.

Lol, youmad. Things are just moving quickly in the JailBreaking community, Apple is relentless on releasing patches and fucking them over with the baseband. Be patient, try to understand shit ain't easy for them either.

dhondu - October 20, 2010, 9:29 pm

(Oct 19, 2010 02:47 AM)madness303 Wrote: [\[CITE\]](#) In cydia, go to manage > settings > and enable hacker mode to be able to download pirni (normal version)

I am not able to find any version of pirni

Mine is iphone 3.1.3 16 gb

madness303 - October 21, 2010, 6:19 am

(Oct 20, 2010 04:05 AM)bullzye xxx Wrote: [\[CITE\]](#) Fml this just drains it what a shit fucking piece of crap.

Add the repo: <http://cydia.xsellize.com/>

then, search for terminal in the search tab, and download MobileTerminal iOS4. I use this right now.

zackthewack - November 15, 2010, 2:40 pm

Well I get a bunch of HTTP stuff, but none will send over to the Cracker and none have usernames/passwords. It definitely works though besides that haha.

If there are some other ways of getting those HTTP ones cracked that would be cool. They're probably just random packets though.

aPices - November 20, 2010, 10:43 pm

BigBoss just released the pro version (1.1.8) that offers a GUI for about 2 bucks. I went ahead and bought it because I use the command line version which just plain works. I was surprised, the GUI gets the router address automatically and has an option to use BPF to filter all the potential bullshit

packets then export as a .pcap file to do as you please.

Anyways, I'm pretty new here and have been overseas on deployment so hello. And nice tut Madness!

Fallenbot - November 21, 2010, 9:20 am

Very detailed tutorial mate. I may use it in future,thank you.

thescarface - December 25, 2010, 7:54 am

only one problem:

the gesture to stop the terminal from sniffing doesn't work?

tried it like a million times: up-right, up right, up right.. nothing

just keeps on sniffing

ideas?

Metapodx - January 4, 2011, 9:18 pm

What?? I can't get Anyones wifi password around my neighborhood?

'Snorlax - January 5, 2011, 1:13 am

(Jan 4, 2011 10:18 PM)Metapodx Wrote: [\[CITE\]](#) What?? I can't get Anyones wifi password around my neighborhood?

If their router isn't passworded, you can then.

biohazard9907 - January 5, 2011, 11:25 am

AWESOME!! i gotta try this ty for this tut man :)

xstrownzx1 - January 23, 2011, 4:50 am

WOW thxs soooo much lol imma go try this xD

xMattJew - January 23, 2011, 1:55 pm

Great TUT but you're not aloud to ask for rep . You should probably edit that out.

CobraBytez - February 17, 2011, 7:20 pm

Great tutorial thank you very much, hope it works with 4.2.1 still...I tried to install aircrack on my phone FOREVER and it wouldn't work, even after hunting down a half million dependencies.

D1sp0sab1e - February 26, 2011, 9:14 am

try Pirni pro (gui) or pirni (command line)

123456789i - March 10, 2011, 4:17 am

looks good im gonna try that out lets see if it works :)

Caprycorne - March 12, 2011, 2:43 am

I have the same problem, what is the task to add at gesture to stop sniffing please?

EDIT: Just ^C, I readed again and it was clearly wrote x)

Sensiz - March 12, 2011, 3:09 am

Really nice basic tutorial :)

/thanks

Caprycorne - March 13, 2011, 4:08 pm

I tried it, and that's awesome! Thanks for sharing dude =)

Mediodude - March 15, 2011, 10:43 am

this is really cool. I was searching for this a while! thank you mate!

I only got a question is there a way that you can search for hosts on the network? that will make it really easy on big open networks.

nick__name - March 23, 2011, 11:40 pm

No hashes import into the cracker when I select something and "send to cracker" :s

domo-kun - March 24, 2011, 11:45 am

This is awesome, nice tut!(: I've been meaning to find cool ways to hack with my touch

Sefior - March 25, 2011, 12:02 pm

I installed MobileTerminal.. But when I open it, it opens for max 1 second then it closes again..
Anyone knows why?

HydroliqueOne - March 25, 2011, 2:04 pm

Can you do other things on ipod when the terminal is running? or will it stops then?

Mediodude - March 27, 2011, 7:37 am

@Sefior

I think you have ios4 so you must download the mobile terminal that is made for ios4 just search on Mobile Terminal and you will find it.

Also you dont need the terminal anymore if you use Pirni Pro.

And i want to give a tip to people.

Download iNet you can see who is on the network and which IP they got. So you can copy the IP and put it in Pirni Pro!

Notizen - March 27, 2011, 8:00 pm

Thanks for showing your IP. Consider yourself Doxed xD

Anyways good tut.

STmAos - March 29, 2011, 8:57 pm

(Mar 25, 2011 12:02 PM)Sefior Wrote: [\[CITE\]](#) I installed MobileTerminal.. But when I open it, it opens for max 1 secound then it closes again.. Anyone knows why?

Do you have iOS4? That happened to me too, go to Cydia and add a new source:

<http://cydia.xsellize.com/>

after verifying, look for Mobile Terminal iOS4 and download. It should work like a charm after that :D
I have a few questions, has anybody been able to find the original Pirni?i know there is pirni pro but id like to get used to the terminal not GUI

also is sniffing undetectable?meaning if i were to try this at my school nobody would know the network was being sniffed and trace back to me?

g1ll1s - March 30, 2011, 10:27 pm

You can also download iPwn script for mobile terminal, it even has some thc-hydra in there. Great little tool, and it works most of the time, yippeee!!!

Kronesin - April 7, 2011, 7:12 pm

I must of messed up, I some how deleted my modems flime ware and now it's in need of a fix. I was like omg that's just weird.

anonymous135 - April 23, 2011, 7:41 pm

If you can connect to a network already, there is a cydia app called wifipass and it displays all networks and passes that are stored on the device

drummerguy95 - April 24, 2011, 2:36 am

bro thats the maddest post ive seen lately
sweet man!!!!

blake1996 - May 31, 2011, 4:49 am

thank you man!

too short

Zazyt - June 1, 2011, 4:42 am

Very cool and helpful! Will try this today at school :D

+Pirate - June 1, 2011, 4:43 am

Just saying.. Proper referencing is a good thing...

<http://willsco.site90.net/wordpress/?p=233>

austinnorman95 - June 1, 2011, 8:48 pm

Hey can someone pm me, does it stop scanning when the ipod goes to sleep? is there some setting is hould change to make sure it keeps going?

darksideofthemoon - June 5, 2011, 5:07 pm

Thanks, This could be helpful.

dmn13308 - July 21, 2011, 1:56 pm

[img]http://img535.imageshack.us/img535/3289/unled5uj.jpg[/img]

My plans for three days from now was to go to my college and bring my laptop in and cain & able the whole day then come home power up the laptop search through the packets and hope i get something. The school has just over 950 students all with unique user accounts, There are also atleast 150 staff accounts all with access to the in network staffweb. More then 1,000 PC's and mac laptops running novel. Each classroom and room has a very strong signal router monted on the wall. Also atleast 5 or more Super admin loggins. Every staff member will log in at least once a day through staffweb for emails. So that would mean i should get a few staff accounts so that i can get access to the student records database. These have info of all of Detentions, suspensions, records, pictures, contact information, Medical details, Grades ect. So i have a HUGE list off all this bad shit i have ever done suspensions ect. And what the teachers do when they get new students they come onto staffweb open up all your info and automatically hate me because i have some really bad things on mine drugs ect so i get lower grades. So i want to download that whole database remotely from home then delete them all of the servers. Now they also have a media server about 700gigs, I will also shut that down. Also shutdown gateway email server after monitering. Since back in year 8 when we all looked at teachers computer and she had a pic up of me and my profile she explained to us how this works and brought up some mates profiles for the lulz sence then i though it would be awesome if i knew how to hack and i just deleted everyones datebase so no one would have a bad record anymore new start for them all :) I have the wireless network password 'keepitsecret' lulz and all the server log ins im ready to go. And thanks to this tut i should be able to do this with basically no chance of getting caught. thanks :)

Ohh yeah and btw did this work well for anyone ells in large networks like this for you?

Yes but no one has the network password and all the root locations of gateway, mail servers, clickview/media servers, novel client logins, novel computer monitor logins I HAVE all the directories. And heaps more. Taken me months to find all this and the network passwords. And the reason why no one has done this is because around 3 years ago at the school someone tried installing rats on the network loops in the lan files. So that it would run onto every computer. And novell has a system were it takes screen shots every around 3 seconds and saves to there H drive. Restricted accses only to super admins. But no one knew about this. The kid got expelled instantly. But i will not be caught i have put alot into this and it is going to be worth it. :)

EDIT : Oh and yeah its a high school so its year 7's - 12's. And im year 10 and I can hack much better then all the year 12's i have helped many of the setup rat's but they have no idea how to packet sniff or get into networks.

iRun - July 23, 2011, 10:56 am

Very nice tutorial, i will be having it run all night to see what i can find ;)

gepison - September 18, 2011, 2:58 pm

Sorry to an old thread but I have a question about this.

I've been trying this on my own networks. At first I thought I would need to install some software which would turn my iPad into a wireless router and then connect to the the iPad from my own PC, this made sense in my mind because the packets would be going through the iPad and hence I should be able to intercept them. This didn't work though and threw up a bunch of error messages, which is why I looked for a howto like this.

Following the how-to it has worked just as described. Using the guide I connected from both my iPad and PC to my home router (which is wpa2 protected), set it to monitor traffic on port 80 and then I would visit web pages from my PC. Sure enough as I visited web pages I could see my http requests in real time on my iPad. However, I'm scratching my head about how it was able to work. It's an encrypted network, the network involves a router, my PC and my Ipad. Now as far as I thought when I visited a web page the packet is encrypted by my PC and then sent to the router where it is decrypted. So how the heck is my iPad able to see these packets in plain text?

surprised this wasnt reported. asking for rep is not allowed no matter what, even in a tutorial.

IFrank80 - November 11, 2011, 2:55 pm

I keep getting a error ? "-sh: pirni: command not found" I Have it all installed?

liIkurd - January 16, 2012, 6:44 am

Thanks dude

looks great. I'll enjoy it.

(Oct 20, 2010 03:59 AM)bullzye xxx Wrote: [\[CITE\]](#) terminal app wont run and ive reinstalled it several attempts but im using ipod 4 with 4.1 (Mar 25, 2011 12:02 PM)Sefior Wrote: [\[CITE\]](#) I installed MobileTerminal.. But when I open it, it opens for max 1 second then it closes again.. Anyone knows why?I had the same problem myself, I don't know if you still want an answer to it, or if you fixed it yet. I copy and pasted the information that I used to get the terminal up and running for me. I will also provide a link, so you can get all the downloads that you will need from the OP of the solution. I personally used the "iFile" method to get it working.

<http://modmyi.com/forums/general/721749-mobile-terminal-keeps-crashing-help.html>

using... iPhone4 , 5.0.1 (applies to multiple versions) - installing mobile terminal r510

Ok... i had trouble downloading it from everywhere... but here is a manual way to do everything that I really like. the reason for that is that , with most tweaks is one time use effort. This however is a procedure you should know, and list of programs you should be using.

Depending on the iOS version you are using you may need to manually install the file with a couple of quick steps.

Solution A.)

Try to Download the iCauseFX Repo, that fixed it for me on a 3Gs, with no hassle. 5.0.1 :

Solution B.)

By doing half the instructions below, with iFile installed, you can download from your mobile device, and bypass the use of a desktop / laptop. With that installed properly, it should say "open with iFile" in Downloads. From there you can click and install.

Solution C.)

First you will need to to SHH to your device (the best feature of jailbreak)

You will first need to install openSSH on your device.

You will also need iFile installed on your device, to later browse for the file/s that you will be moving to your iPhone.

After you have iFile , and openSSH installed on your phone, connect to your iPhone device with Cyberduck, in the SSH(sftp) mode. Here is another article on cyberduck and SSH if you have problems. You can download cyberduck for os X and all Windows ver. Here

I could make many notes about Cyberduck but will just say if you are new to it, you really should be using it already.

YOU MAY EXPERIENCE A PROBLEM once connected. While browsing files you may not see the right things there, as if you have no access. The problem is the directory browser bar, as default, goes into recursive depths. You may also have a PROBLEM when connecting, if it says "try again" you may need to click that a couple times.

For example my version started on "private/var/root/" , I changed to bookmark to start on "/" so I don't get confused and work my way in.

You should now be able to browse your file system on the phone. (as shown from previous linked post)

Mobile Terminal keeps crashing! Help!!-cyberduck_iphone_connected.gif

you can then navigate to the download page in your web browser for mobile terminal to select versions. (Download MobileTerminal [here](#))

Now that you have downloaded the file, (for me using 5.0.1 iOS I needed to install "MobileTerminal_511-1_iphoneos-arm.deb"

if you have mobile terminal installed already and its crashing, uninstall it now, and continue.

Now you have that file in your downloads folder, or wherever it may be, drag it now to your desktop, as you will be dragging it into cyberduck.

With the cyberduck window open and navigated to your "/" root file directory on your connected iPhone, drag the downloaded package into the window, so that it will copy.

now that the file is in place, open "iFile" , on your device, from previous mention.

once in iFile, you will see the package in your list of files that iFile is showing you. (ex. MobileTerminal_XX_iphoneos-arm.deb) By touching the file you will activate the choices, " ZIP, Unarchiver, Installer" Press installer to install the package.

return to cyberduck and you can now delete the package. it is now installed. I would suggest google for finding out what version you need for your iOS, but it is likely a mismatch that is causing the failed launch .

respring or restart.

iAndy - January 30, 2012, 12:54 pm

:O thanks i am going to try this later!

Chumlee - January 30, 2012, 5:24 pm

if your using cain not on the iphone, all of the steps on the iphone are not really needed, would be nice to have a mobile version of cain

arens - February 3, 2012, 11:03 am

Im sorry if im posting on the wrong page.I posted this message 2 days ago on different page but so far no answer,so i hope by posting here u guys can help me. Hi i have two jailbreak iphones 3s & 4s.I installed Alwaysonpc from installous,i opened an account and i can log in.When i open Firefox or goggle chrome after 5-10 sec it takes me again to home page on both my iphones.

Can you help me please?

darksrc - February 3, 2012, 1:34 pm

Please don't post in a thread that is from 2009. It's a pain in the ass

~Ultim8um ?
