Thread: [\[HELP!\] VB.NET - Webbrowser - Send a key to webbrowser or Find button \(NO ID\)](#)

Stokerbandit - December 23, 2011, 3:26 am

I need help to:

Send a key to a webbrowser (Enter key)

OR

When i click Button1 then it clicks a button in the webbrowser that dosnt have ID

Code for button in webbrowser:

PHP Code

<?php

```
<input type="submit" value="Log Inn" onmousedown="this.style.backgroundColor='#ddd';"
onmouseup="this.style.backgroundColor='#eee';" onmouseover=
"this.style.backgroundColor='#eee';" onmouseout="this.style.backgroundColor='#fff';" />
```

</form>

Thank You! :)?

System[X] - December 23, 2011, 3:45 am

Try this

```
Code Dim htelcol As HtmlElementCollection = _
WebBrowser1.Document.GetElementsByTagName("input")
For Each el As HtmlElement In htelcol
If el.GetAttribute("type") = "submit" Then
el.InvokeMember("click")
End If
Next
Thanks
```

the button doesn't have an "ID" so Stokerbandit if u are coding this put an ID to the button <ex? id="submit" </ex> and use System[X]'s code, else this solution is not working for you Code Try this

Code:

```
Dim htelcol As HtmlElementCollection = _
WebBrowser1.Document.GetElementsByTagName("input")
For Each el As HtmlElement In htelcol
If el.GetAttribute("type") = "submit" Then
el.InvokeMember("click")
End If
Next//ibloodqman..
```

u are coding this put an ID to the button <ex? id="submit" </ex> and use System[X]s' code, else this solution is not working for you Code Try this

Code:

```
Dim htelcol As HtmlElementCollection = _
    WebBrowser1.Document.GetElementsByTagName("input")
For Each el As HtmlElement In htelcol
    If el.GetAttribute("type") = "submit" Then
        el.InvokeMember("click")
    End If
Next//ibloodqman..
My code used name not ID so it will work. (GetElementsByTagName)
```

Please read the code again and you will see that it does NOT use ID

Thanks
