Thread: [\[TUT\] Successfull SPREADING **n00b friendly..](#)

Anubis - December 14, 2009, 6:02 am

OMG...OMG...OMG..

HOW TO SPREAD ??

Everybody wants to know how to spread their TROJANS (rats, bots, stealers, keyloggers.....and so) so i decided to make a thread about best spreading methods..Well at least I think that these are the best :P

MOST NEEDED THING FOR A SUCCESSFULL SPREADING IS RUNTIME+SCANTIME
CRYPTER

This crypter will make your trojan completly undetected so when the victim opens the file it antivirus doesnt show (win32.SHIT.apj xD :P) U CAN BUY THESE AT MARKETS SECTION

If you dont this u can use SCANTIME FUD CRYPTER ..U can find these for free here on the forum...

BUt why it is bad??..Well it is not bad at all..When the victim downloads your server AVP will show nothing..but when victim opens the server AVP will say its a trojan...and immediately delete it without executing..

1.) YouTube

YouTube is most successfull method to spread your trojans..because people from all over the world needs some programs or hacks and first place where they search is YouTube...

THE TRICK

You have to be creative...You can download someones video if you are to lazy...and then post it on your profile..Make a cool name for your video..and describe it and post a link to your server in description..give best from yourself..(USE www.multiupload.com)than select an option that allows video commenting but only with your approval..Than when you are done with the video ..open thread in lounge or find someones else thread and post a link saying "Hey can you please visit this video RATE it and POST A GOOD COMMENT or i will fucking kill you...:P) So u will get some good comments and rates, so your video will be more popular...

Here are my ideas of what people are serching on youtube so fell free to use it...

- 1.) Facebook private profile watcher
- 2.) Paypal Verifier (no-login) required
- 3.) Alertpal Verifier (no-login) required
- 4.) Forum post adder (works on every forum)
- 5.) Crypter [RUNTIME+SCANTIME] free
- 6.) Nokia s60 (every phone hacker) [install unsigned apps]

- 7.) IP HIDER (first ever CRACK)
 - 8.) Runescape first ever trainer +4
- THAT WAS YOUTUBE METHOD
-
-
-

FACEBOOK METHOD

This one requires a few facebook accounts....When you have them..we can start..

Upload your server in ZIP (to a www.multiupload.com)

Now go spamming groups and peoples....try to start a chain like saying every friend

"Hey, Facebook private profile watcher is out..Check it here: DOWNLOAD LINK and pleasee send this to all your friends to make this app growing..

FORUMS

This is also one successfull method....

Posting infected links on forums (NOT HACKFORUMS) ??....

So the idea is.."POST YOUR SERVER BINDED WITH THE PROGRAM"

Here are some ideas

- 1.) # premium link generator [NEW]
 - 2.) IP HIDE 2009 (fully cracked)
 - 3.) WINRAR (4.0 FINAL VERSION) NEW -----> this doesnt exist but u can made it anyway
 - 3.) Limewire newest version -----> i dunno which one is the latest one
 - 4.) Kaspersky AV & IS Patcher
 - 5.) Sharing sites premium link generator
 - 6.) Download Accelerator Plus
-
-
-

CHAT

This is not so successfull method but you can try it...You can try it with an unknown person..

GOTO www.omegle.com and behave HOT ? saying thinks like these

Hello..Im tinna..are you for a camchat..im hot 78 year old girl ? and then try to make the person believe you..lie something..Heh srry my MSN is not working can you download this CAM messenger from here...

There are also mIRC...321teenchat and moree....

THATS IT

FOR SETTING UP

Ilurk - December 14, 2009, 6:27 am

Nice post though I would think that ways of spreading are pretty obvious. When I was still spreading malware I would just sit in yahoo chat with a female named account and anyone who pmed me (I at least only infected people who disturbed me ?) I would just send them a pic of some hot ass girl and when they asked me if I had a cam I would send a file with a cam based name (sometimes I wouldn't even bother changing the icon lol) and 99% of the time they would accept it and run it. Only takes a tad bit of SEing(pretty much none) and you don't really have to waist your time because you can do it whilst doing other stuff.

Figured I would just toss in my old spreading method..

Youre right.....:P and i forgot to say..that you can change your .exe into .jpg...that will really help with spreading

Be creative. Make a website with downloads. Then submit your website to Google (<http://google.com/addurl>). How do you think rogue programs like Antivirus 2009 got around?
P.S Over 9000 is more suitable for flaming.

Yea mann..I agree and i must add that In the philosophy of religion and theology, the problem of evil is the question of whether evil exists and, if so, why. The question particularly arises in religions that propose the existence of a deity who is omnibenevolent while simultaneously also being omnipotent, and omniscient[1][2]; attempts to resolve the question under these contexts has historically been one of the prime concerns of theodicy.

did u mean xxxx.exe --> xxxx.jpg.exe ?
2 my noledge a.jpg file can't be backdoored except by metasploit !

Plutonium - January 20, 2010, 5:38 am

Indeed, How do i convert a .exe into an JPG? and dont say it is the hide file thing...

inj3ct - January 20, 2010, 6:26 am

youtube is the best way to spread servers.

Neroxan - January 20, 2010, 6:38 am

Youtube spreading is slow for me. I posted a FUD runtime crypter with 5 stubs with it and only have 13 dl's in 3 days:(

Torrents spread like nuts though. Very easy and fast if you have a small file to be spread that is highly searched for(cough cough facebook games bot).

(Jan 20, 2010 06:38 AM)Plutonium Wrote: [\[CITE\]](#) Indeed, How do i convert a .exe into an JPG? and dont say it is the hide file thing...

Use reshacker to name file like server.jpg.exe then put it in a folder, and put that folder in another folder, then zip it so extension dosent show.

Edit: also dont forget to change the icon to a jpg icon.

Ex-Coder - January 20, 2010, 6:41 am

If youtube slow ? then use the forum method. Post at warez forum :P

I already do that mate. I just dont find anything faster than torrents myself. None of the above get

me 100 dl's a night+ like torrents do.
