Spreading

When it comes to spreading there are 2 levels (i class lol dont flame)

- 1.)Easy, Minimum Effort Long Term Spreading
and
- 2.)Hader(requires some Social Engineering)

So Minimum effort would include making or stealing youtube videos for like Keygens/ "hacking tools" and just rename ur server to go along with the video your using and just put the link to ur server in teh description.

Another good Minimun effot would be if you have any facebook passwords (not yours) to log into them (through a proxy lol) and say go into a Steam Group and be like "Hey i just found a working program that alows you to unlock free steam games! [LINK]" and that works pretty well.

Theres more like torrents and stuff but there harder to set up.

Those will get you some good long term downloads

Now the harder way requires alot of free time. and that would be chat rooms

So first rename your server "Naked pics"

lol

So you just find a free chat room to spread in make your name like "Horny Babe"

And just say:

"19/f Hey any guys wanna check out ma sexy pics [Link] please im looking to be rated ;)"

Lol something like that. from doing that you can usaly get some fast downloads but after like 5-10mins people catch on.

EDIT: <http://omegle.com/>

^Some Good Free Chat Rooms^

Hope that helped

would having a link to a java driveby site be better than having a link to a megaupload link to my file?

?

Do you mean a link to a JDB? Or is there another method with a link?
