Our shells are VPS (Virtual Private Servers) with PHP shells, so imagine a booter with 1,000 shells and times that power by 7!

ToS:

- 1) No refunds will be issued.
- 2) No abusing the service, this will lead to suspension!
- 3) No sharing accounts
- 4) Don't keep hitting right after

Note: Since people abused it like little dicks, I removed the register & autobuy. It's still super strong.

Don't worry I couldnt be bothered to do anything to you since you seem nice, my advice is to fix up. PM me if you need help in patching it.

In addition: Making a twitter is the dumbest thing to do, It makes it easier and faster to be caught and jailed, take that off aswell. Just add a chatbox to your booter system.

Can it take down 1000/1000mbit (up/down) connections?

Home connection if it matters, no kind of protection other than the router.
