Thread: [How to stop getting ddosed by People.](#)

Max.schoops - December 31, 2011, 6:50 pm

This Will Cover:Servers

Your network

Blocking Them on your network.

First, you need to know the shells/Bots ip addresses. If you have been ddosed by them before, then it will be in your routers logs.[Alternitivy, Get public shells and do it.] Log into your router.

Copy all the ips into notepad, Then you can begin.

Go to your router log in, then go to firewall. Block all of the ips in notepad and you wont have any problems.

Servers

With servers it can be different.

If it is a linux VPS/Dedicated server then, You have to use iptables or an alternative.

Google, How to use iptables for more information.

Tofraz - December 31, 2011, 7:14 pm

Very simple but descriptive. Thanks though now i have something to give my stupid friends who do stupid things to the wrong people :D

darksidessj25 - December 31, 2011, 7:17 pm

Thank you. I always wanted to know how to protect my self against this.

Hills - January 1, 2012, 12:52 am

You can always block it with Zone Alarm too.

??h™ - January 1, 2012, 1:05 am

You can not block a DDoS attack with any sort of fire wall. If someone hits you with 10gb/sec on port 82 you are down. Period.

Frida - January 1, 2012, 1:49 am

Have fun blocking every IP of every single bot hitting your shit.

Do you know how unrealistic this is?

This would only work if a VPS is hitting you because you'd only have to block a single IP.

mDopeyk - January 1, 2012, 1:58 am

lol, took the words right out of my mouth. ?

Sutton2k9 - January 1, 2012, 3:31 am

It very hard to block IP's if some with hits you with a ok amount of bots say 500 you telling me you will go to your firewall and block 500 ip's from your firewall.

Or blocking shells where most shell booters have 2-3k shells

Do you know how unrealistic this is?

This would only work if a VPS is hitting you because you'd only have to block a single IP.Its possible. I guess you could make a bot to block them.

But you no, i know this isnt practical, but it will work.

(Jan 1, 2012 01:52 AM)Hills Wrote: [\[CITE\]](#) You can always block it with Zone Alarm too.No. it blocks it on your computer, not your router.

No. it blocks it on your computer, not your router.

You can never really fully block a dos attack unless you disconnect form the internet... Theres always a way.If you disconnect from the internet then i think you find they have done there job

Max.schoops - January 1, 2012, 3:54 am

(Jan 1, 2012 04:44 AM)Sutton2k9 Wrote: [\[CITE\]](#) If you disconnect from the internet then i think you find they have done there jobThats my point.

The only way to truely evade getting ddosed, is to not use the internet.

Sutton2k9 - January 1, 2012, 4:20 am

(Jan 1, 2012 04:54 AM)Max.schoops Wrote: [\[CITE\]](#) Thats my point.

The only way to truely evade getting ddosed, is to not use the internet.I use the internet an never been ddosed.

The best way to evade getting ddosed is don't go on xbl and tell every one you are going to hack there account and ddos them.

That is the best way.

Max.schoops - January 1, 2012, 4:29 am

The best way to evade getting ddosed is don't go on xbl and tell every one you are going to hack there account and ddos them.

That is the best way.Then again.

People sometimes ddos to win games, but they dont do it over 15 seconds or so.

You just get laggy as fuck. But yeah, dont be an internet gangster and you wont get ddosed.

BeggFoMercy - January 1, 2012, 8:42 am

Great lol that can be token against a fool hacker
but reall hacker will recomend using a VPN due to DDosing
so 0% that u can catch em away

Codevade - January 1, 2012, 12:35 pm

So you're suggesting blocking IPs on a end user Router Level?

Which will do nothing because if the flood is above your pipe(Which 90% of the time on home connections it is) It won't matter anyway as your modem will not be able to handle it to even pass the data on to your router.

There is no easy or simple way to block or stop DDoS attacks on a application or homer connection level.

Vater - January 1, 2012, 12:45 pm

The best thing to honestly do is just to either get a vpn or change your ip.

kingkelvin135 - January 1, 2012, 2:21 pm

To block your self from a simple ddos attack just get a strong VPN.

OMGCookies - January 1, 2012, 3:56 pm

Hmm. I have heard the term 'ddos' before, but i never knew what it was... Could someone tell me exactly what it is?

chris305 - January 1, 2012, 4:01 pm

(Jan 1, 2012 04:56 PM)_OMGCookies_ Wrote: [\[CITE\]](#) Hmm. I have heard the term 'ddos' before, but i never knew what it was... Could someone tell me exactly what it is?

Distributed Denial of Service attack. They basically take your internet down.

<http://imgtfy.com/?q=DDoS>

B-Hatt - January 1, 2012, 4:22 pm

i think if you directly connect your computer or xbox or whatever you are using to your modem then idt you can go offline... im not 100 percent positive about this because i have never tried but i have heard many people say this before

Max.schoops - January 1, 2012, 5:24 pm

If your bridge a connection from your computer, and use a vpn, it could help somewhat.
