Thread: [Centos 6 32 bit or 64 bit](#)

Apex - January 3, 2012, 10:48 am

Hello I have just purchased a VPS to setup Viking script on for DoSing, but I'm having a problem. From what I know it's Centos 6 but I don't know if it's 32 bit or 64 bit, I have tried searching but it doesn't really show anywhere.

So quick: When I set up a DoS script does it have to be 32 bit or 64 bit?

It does not really matter what type of os you use.

Really :i sudo apt-get install perl just doesn't work for me, it keeps telling me that apt-get is not a command.

in the shell type :

uname -m

or check a binary file

That's because Centos does not use apt-get to install packages, that is an ubuntu command along with other unix flavors.

Centos use "yum" for the installation of packages. so try:

Code yum install perl

thought, perl is probably installed already, maybe you are just missing a module of perl.
