Thread: [\[Final Stages \] Decay Logger Public v2.0 - Beta Testing / Upcoming Release!](#)

Impurity - January 5, 2012, 4:04 pm

With the help of a few friends, Decay Public v2.0 is finally fixed and completed! I'm currently looking for beta testers to test functionality of all the features across different Windows versions (the more the merrier!). I'm also in need of a new logo, as I'm unsatisfied with my current one. With that being said, if you can do either of those jobs (graphics or beta test), please PM me, and be sure to include your past experience.

The reason I made this thread was to answer a few of my questions for the Hackforums community. Below are all of my questions, so feel free to post your feedback on any of them, as I want to hear from you! I'm developing for you guys, and obviously I'm going to try to release what you want to see!

As a free product, Decay will be detected, there's not a LOT I'm willing to do about it. Luckily though, I have several backups of the source, so I won't be losing it this time. I'll do my best to keep it low on the detections, but how important is this to you guys? Is it worth my time? Feedback please!

Sadly, I do not condone leechers or the use of my software to simply upload to virus total, so there will be both protection on the download, as well as a survey from Filelce (most likely) to give me both some income and reward for my work, and to protect the file and hopefully keep it undetected for longer. Opinions?

Should I offer direct links for a small fee? (\$1) to help generate some extra income and pay for my hosting?

Would you download FUD updates (or lower detection updates) from a survey site (Filelce)?

If you have any other questions about this version of Decay, or any feedback, please post it here! Can't have my inbox overrun! Also please keep this thread somewhat alive so I can modify the release around your guys needs/wants!

?Dubstep - January 5, 2012, 4:06 pm

Yay nice, good luck. Vouch.

Kom - January 5, 2012, 4:13 pm

Vouch, will be testing when you send it to me lol

Impurity - January 5, 2012, 4:18 pm

Sent you it Kom <3 XD Looking forward to hearing what you have to say about it. Someone post feedback, else this will just be a waste of my time.

Darktheif - January 5, 2012, 4:20 pm

I'll help test:) I got a few bots i can test on

Impurity - January 5, 2012, 4:22 pm

Can you list your experience with keyloggers, malware, and the windows os versions you can test on?

Belgio - January 5, 2012, 4:24 pm

I'll be willing to test. I'm sending you a PM right now.

Edit : PM sent.

1 - As a free product, Decay will be detected, there's not a LOT I'm willing to do about it. Luckily though, I have several backups of the source, so I won't be losing it this time. I'll do my best to keep it low on the detections, but how important is this to you guys? Is it worth my time? Just try make sure it stays compatible with most of the crypters used by the user base. Try lower the detection rate, but don't waste too much time on this.

2 - Sadly, I do not condone leechers or the use of my software to simply upload to virus total, so there will be both protection on the download, as well as a survey from Foolish (most likely) to give me both some income and reward for my work, and to protect the file and hopefully keep it undetected for longer. Opinions? Uploading the file to Foolish is not a problem though you must keep in mind that to be a better keylogger you must offer a better service than any others (For example you could offer direct links to ub3rs only or something (its up to you where you go with this)). Also don't understand what you're trying to say with the file protection.

3 - Should I offer direct links for a small fee? (\$1) to help generate some extra income and pay for my hosting? Yes this is a good benefit for people who can not do surveys.

4 - Would you download FUD updates (or lower detection updates) from a survey site (Foolish)? Probably so.

EgoHack - January 5, 2012, 4:24 pm

1. If it's compatible with most crypters, I see no problem with it not being FUD. As long as it's mostly UD, it's OK.

2. My opinion? This fucking sucks. F!eice and shitcash are both not working for me, meaning I couldn't use the logger when it comes out. Also, I'm against surveywhoring. If you don't want the logger to be leeches, just encrypt the download link, and the .rar file. And only give it out on HF/Trusted sites.

3. No. You should let people donate to you. -> Make an optional donate button.

4. I totally would if I could.

That being said, I'd like to try to do the logo. I'll pm you.

tux1 - January 5, 2012, 4:30 pm

Keylogger sounds nice but to be honest I think if you made surveys compulsory I don't think you would get that many downloads as for a lot of people they don't work. Plus there is still quite a few keyloggers around that have no survey or adfly links eg. project neptune, sys logger etc.

Impurity - January 5, 2012, 4:36 pm

I don't need the surveys, but my hope is that they keep the file undetected for longer.

FearMe - January 5, 2012, 9:11 pm

As a free product, Decay will be detected, there's not a LOT I'm willing to do about it. Luckily though, I have several backups of the source, so I won't be losing it this time. I'll do my best to keep

it low on the detections, but how important is this to you guys? Is it worth my time? Feedback please!

Feedback: When you are doing something do the best. Man if your little more doing can make it FUD then i suggest to do it. But keeping detectiong for its a free product is not a sincere thinking.

Sadly, I do not condone leechers or the use of my software to simply upload to virus total, so there will be both protection on the download, as well as a survey from Foolish (most likely) to give me both some income and reward for my work, and to protect the file and hopefully keep it undetected for longer. Opinions?

Feedback: Obviously you deserve some rewards for working so long hard for this product. But as you mentioned if income is not the main target then i suggest you to keep a encrypted password or link for the product. As Its called a free product.

Should I offer direct links for a small fee? (\$1) to help generate some extra income and pay for my hosting?

Feedback: Yes you can do it fairly.

Would you download FUD updates (or lower detection updates) from a survey site (Foolish)?

Feedback: About survey sites, some country peoples are not able to complete surveys and get any product from survey sites. I think you will reconsider this fact in generally.

I liked the previous version too. The new one will be better i wish. Thumbs up man. You are coool.

P2PPT - January 6, 2012, 2:48 am

try to encrypt the file (rar) with xor or other encryption and encrypt the pw too, you get double encryption, if you want to encrypt the rar file and not the pw only i'm here and i ensure you a little members can decrypt this double encryption so i can help you to encrypt the rar file and i provide you the tool to encrypt the rar file if you want..

behzad - January 6, 2012, 3:40 am

These are the ways to keep a public tool FUD for a long time:

- 1) Encrypt the RAR password a several times
- 2) Use multiple surveys so in survey one is a link to survey two
- 3) Private stubs

Pod548 - January 6, 2012, 4:22 pm

does this work for anyone??? i would really like to know how you get people to download these :p

Impurity - January 6, 2012, 4:35 pm

It's not released yet. I'm working with my small handful of beta testers to fix up all the screw ups and optimize code as well as implement even more features.

Darktheif - January 6, 2012, 9:14 pm

(Jan 5, 2012 05:22 PM)Impurity Wrote: [\[CITE\]](#) Can you list your experience with keyloggers, malware, and the windows os versions you can test on?

Expirence:

Keyloggers: used many public ones like, (<https://hackforums.net/showthread.php?tid=1382687>) and tested all its features with different features:)

Malware: Rats (ratting people with methods like java drive by) used a public worm (another forum)

Windows Versions: xp, vista, windows 7:)

Red Sub - January 7, 2012, 3:25 am

Hi here is some info about me,

OS: Windows 7 64x (Home Premium)

I used alot of public/free keyloggers, but also payed ones like XYZlogger v4, And RapZo Logger v2.

I hope I can be a beta tester.

Thanks in advance.

- Red Sub

king_hendra - January 7, 2012, 5:24 am

Please don't use survey i can't complete it even use vpn.Use rar password protected will be good..

I'll do my best to keep it low on the detections, but how important is this to you guys? Is it worth my time? Feedback please!

Sadly, I do not condone leechers or the use of my software to simply upload to virus total, so there will be both protection on the download, as well as a survey from Foolish (most likely) to give me both some income and reward for my work, and to protect the file and hopefully keep it undetected for longer. Opinions?

Should I offer direct links for a small fee? (\$1) to help generate some extra income and pay for my hosting?

Would you download FUD updates (or lower detection updates) from a survey site (Foolish)?

1. As long as there is no problem crypting it that would be fine.
2. What you could do would be so that once the builder is run on the users computer, virus total and other sharing sites are blocked. People may not like it that much but it will save your crypter and just give people a heads up.
3. Yeah that sounds fair.
4. Problem with a free program is the shit FUD time no matter what, so probably not. But I might if you blocked the scanning sites and linked to the foolish downloads with an encrypted string so you have a triple leecher block, but to somebody that knows what they're doing and is dedicated it's not much of a setback.

I hope my answers helped :).

Also I can beta test if you want, I have XP.

Impurity - January 7, 2012, 8:44 am

I'll contact you soon about testing on XP :) Thanks for the feedback!

Fark, stealing all my ideas you cow. removes from MSN contacts -- now decay will never be released :D

Sniped M8 - January 8, 2012, 1:04 pm

yea good luck man from ur previous log

madmarco - January 9, 2012, 1:38 am

I want to try it ! please let me know how to become a tester

Impurity - February 2, 2012, 2:29 pm

Need more testers! All OS's are available again.

Zetryio - February 2, 2012, 3:07 pm

I would like to test this.

I'm on Windows 7 64 Bit.

This will require .NET 2.0 correct?

Also I'll check decompiling it and look at how good email credentials are encrypted.

andrelarva25 - February 3, 2012, 11:21 pm

i want to test your keylogger can i ? :D

my OS is windows xp SP3

darksage44 - February 3, 2012, 11:58 pm

Id love to test it :) And if im allow'd id hope to give you good feed back
OS

Windows XP SP2

Impurity - February 4, 2012, 8:17 am

Please PM me if you want to beta test as well, and include OS's you can test on, your experience with keyloggers, and your contact information.

approvedjamyoyo - February 12, 2012, 1:17 pm

If you could please send it to me, looks great so far can't wait to test :p
