Thread: [\[TuT\] Using .Replace and .Insert \[VB.NET\]](#)

iRtehLeet™ - December 18, 2009, 9:50 pm

Hello all, this is my small tutorial on how to use .Replace and .Insert in VB.net.

.Replace

What .Replace does is it will replace whatever text you have chosen with the text you choose, lets look at an example code.

Spoiler [\(Click to View\)](#)

In the above example, I have told the program that when Button1 is clicked, it will find "abc" in the string/text, and replace it with "iRtehLeet".

.Insert

.Insert is really useful. What it does is, goes to the indexed number in the text/string that you told it to, and then inserts some text/string there. Let me give you an example. My string = "Hello1234", in Hello1234 I want to insert "World" after "Hello". So I figure out the index number in which the word Hello ends.. to do this we count (INCLUDE 0)... H=0 e=1 l=2 l=3 o=4 1=5, so our index number is 5 (the number we want our word to start), and we want to insert the word "World" so we write "World". See the example below:

Spoiler [\(Click to View\)](#)

I hope this taught you all a little bit and this is mostly for the noobs out there. Thanks for reading ?

newbie223 - December 18, 2009, 9:53 pm

ok i see but wads the great use? to replace a password?

iRtehLeet™ - December 18, 2009, 10:03 pm

Well there are a lot of uses.. I just haven't figured them out yet, maybe someone else will before me I'm sure I may use them in the future.

newbie223 - December 18, 2009, 10:26 pm

oni thing i can thing of is make a simple password crypter example

password = iRahteh

replace h with (010)

replace a wit [lol]

den password = iR[lol](010)te(010)

Sikandar - December 18, 2009, 10:33 pm

thankz dude...this will come in handy next time..:)

iRtehLeet™ - December 18, 2009, 10:47 pm

Nice share (rly dont see any use yet but thnx) :D:D:D:D:D

[Epreuvez] - December 19, 2009, 2:13 am

Pretty easy one, but ?I've been coding for about a year, and never come across the Insert function.

So, thank you ?

The End Gamer - December 19, 2009, 2:26 am

Great Tutorial

This Will Come in Handy For Some Of VB.NET Coderz =)

iRtehLeet™ - December 19, 2009, 11:27 am

Yep I just came across it as well and decided to share it. ?

Estemirilix - December 19, 2009, 1:15 pm

Thanks man this is nice share, hope it helps lots of newbs out there, and maybe turn a few skidies into pro hackers one day xD.

TheOneEyeDude - December 20, 2009, 3:22 am

Thanks u 4 this thing

If nottutorial.show() then
MSGbox("GODDAMIITT, , NOO!!!")
end if
GG ing a 2 year old thread with a completely useless post. ???

KingCobraXD - July 6, 2011, 3:18 am

Wow. Rare chance. I haven't seen iRtehLeet, Sikandar, and newbie223 for a while. BTW, nice post.
=)

EDIT:

Nvmd. This is an old thread. -.-"

ShadowHelper - July 6, 2011, 3:46 am

.Replace is very useful. A lot of my programs use it and without it my youtube account creator wouldn't work very well :P

iRtehLeet™ - July 6, 2011, 2:24 pm

Wow my tiny pic images are deleted from this 2 year old thread. ?
