[TuT] How to create a Simple Keygen?

[Video: <http://www.youtube.com/watch?v=1ZjF9ji2e0c>]

Description:

Code For Generate

```
Dim Key As Integer
Key = Int( Rnd() * 6)
Select case Key
Case 1
Text Box 1. Text = " 858-787-767-809"
Case 2
Text Box 1. Text = " 158-787-767-809"
Case 3
Text Box 1. Text = " 558-787-767-809"
Case 4
Text Box 1. Text = " 358-787-767-809"
Case 5
Text Box 1. Text = " 658-787-767-809"
Case 6
Text Box 1. Text = " 758-787-767-809"
```

For Exit

End

b0xy - January 9, 2012, 8:27 am

Maybe you should remove ? from the end of the sentence or it will confuse some people.

pr0t0typ3 - January 9, 2012, 8:27 am

Well, this is more a simple keylist with a random selector than a keygen, but it is a good start for coders at the "very beginning".

atotheh - January 9, 2012, 8:58 am

It's not even a keygen, it's just selecting from a list lol, making a proper keygen would prob take less code than that btw

Washi - January 9, 2012, 9:06 am

This is actually not a keygen. What a keygen is, is a program that generates a key and not a program that random select a working key.

You'll have to get the algorithm of a program and put that in the vb.net code.

And btw, how are you going to know those working serials? With another keygen that's a 'real' keygen?

ViviDemir - January 9, 2012, 9:08 am

A keygen is basically breaking the algorithm (tracing it and seeing what it does) and then just making a program that repeats that algorithm, except not in the actual program.

Am I wrong?

EDIT:

^Post above this one. Nuff' said.
