Thread: [Selling DoSbox source](#)

nofear1999 - January 11, 2012, 8:32 am

I'm selling the DoSbox source, it will only be sold to 1 person.

You aren't allowed to sell the source but you are allowed to make a booter and sell access to it.

This is a source that was up for just about 2 years or over 2 years, I don't remember when I started it so it has had ALOT of tweaking making it better & better.

Post your prices below, highest bidder wins the source.

We will be using a STAFF middle man so basically if you scam me you're scamming him and you will probably get banned.

Start offering

Screenshots and list of features would help indeed
and list your payment gateway { Paypal, LR..? }

nofear1999 - January 11, 2012, 8:45 am

Can't take screenshots as the server is down and features are basic it can DDoS, count shells, how long project has been up, I can add a SMS bomber, email bomber and that shit if the person really wants real fast I just know that would make it unstable if too many people use it and I designed DoSbox for stability and speed.

I can also do older sources such as my 4.5 which has "Putty" DoS and IRC DoS Bombers, free VPN generator and portscanner I can accept PayPal, LR, or Green Dot MoneyPak & more PM me to see if I can accept your Gateway.
