Thread: [\[Tutorial + Download\] μBOT - HTTP Bot & Spreading Techniques!](#)

.Zink - January 13, 2012, 12:37 am

[img]http://i.min.us/idS5OG.gif[/img]

How to setup & successfully spread μBOT
For the true skiddie!

Fixes are already done!

1. μBOT

Firstly, you're going to have to download the files for μBOT ([download](#))

2. Registering with a Webhost

Now you're going to need to get some sort of hosting, I'm going to do this on 000webhosting, just go to [their website](#), and sign up.

I would suggest using a different hosting provider, I'm using 000webhosting simply for this thread.

Spoiler ([Click to View](#))

[img]http://img844.imageshack.us/img844/7498/signupu.jpg[/img]

3. Uploading

Now you're going to have to upload your files to your hosting..

You can either do this through the online File Manager provided by 000webhosting, or via [Filezilla](#). (I'm going to presume the use of Filezilla).

3.1 File Transferring

After downloading filezilla, you now need to connect to your hosting service.

3.1.1 Logging in

Go to the [members](#) area of 000webhosting, and login with your details.

Spoiler ([Click to View](#))

[img]http://img849.imageshack.us/img849/9831/cpanel.jpg[/img]

3.1.2 Click the "View FTP Details" option.

Spoiler ([Click to View](#))[IMG]http://img140.imageshack.us/img140/3746/ftpdetails.jpg[/IMG]

3.1.3 FTP Details

You're now going to connect to your hosting through Filezilla.

Take the information you have and place it into the Filezilla client, your password is the password you used to sign up for an account with 000webhosting. Hit "Quickconnect" once you've done so.

Spoiler ([Click to View](#))

[IMG]http://img401.imageshack.us/img401/3243/logonfh.jpg[/IMG]

3.1.4 Extracting Files

Extract the "uBot source.rar"

Extract the "PHP Source"

Extract the "VB6 Source"

3.1.5 Time to upload.

Navigate locally to ..\uBot source\PHP Source\PHP Source\

Navigate to public_html on your hosting

Then select all of your folders / files in PHP source, and then right-click - Upload

Once uploaded, select all files & folders in public_html, and click file permissions. Set it to 755, apply to all sub directories/files.

Spoiler ([Click to View](#))

[IMG]<http://img441.imageshack.us/img441/687/uploadcc.jpg>[/IMG]

4. Create your SQL

Navigate to the SQL panel in the 000webhosting CPanel.

Spoiler ([Click to View](#))

[IMG]<http://img80.imageshack.us/img80/3662/sqlh.jpg>[/IMG]

Here, you're going to create a SQL database, simply enter your desired username & password. (password must contain alpha & numeric characters)

Spoiler ([Click to View](#))

[IMG]<http://img689.imageshack.us/img689/9248/createsql.jpg>[/IMG]

5. Link your SQL

Through Filezilla, navigate to public_html/inc/

Now, right-click on config.php, and press View/edit

Now you should have the config file up in notepad/ notepad++

edit the SQL info to your info from 000webhosting

The "\$server = 'localhost';" should work, although to be safe.. Look at the SQL creation page on 000webhosting and it should show your host there. For example, mine is "mysql15.SPAM.com". (Changes over time)

Spoiler ([Click to View](#))

[IMG]<http://img210.imageshack.us/img210/7634/sqlinfo.jpg>[/IMG]

6. Importing SQL

Now you're going to have to import the pre-made SQL database.

Navigate to the 000webhosting CPanel.

Now click on phpMyAdmin

Spoiler ([Click to View](#))

[IMG]<http://img80.imageshack.us/img80/3662/sqlh.jpg>[/IMG]

Once you have done this, you will see your database, click "Enter phpMyAdmin"

When phpMyAdmin loads, click Import.

Then click browse under "File to Import"

Spoiler ([Click to View](#))

[IMG]<http://img834.imageshack.us/img834/9144/phpmyadmin.jpg>[/IMG]

Locate the boatnet.sql file.
Once done, hit Go.
The SQL is done!

6. Downloading VB6

Download VB6 [here](#), if you already have it.. Then continue!
(Visual Basic Express is NOT VB6 for those that do not know...)
Spoiler ([Click to View](#)) Thanks to psiico for the DL link :)

7. Editing the Bot

Once VB6 is installed, launch it. You will be given options.
Now, click existing, and navigate to your VB6 files for µBOT
Spoiler ([Click to View](#)) 
Now that you have your project open... On the right, there should be "svc (project1.vbp)", double click on on "Forms", then double click on "svchost (Form1.frm)", and again double click on the "clock" or "Timer" on the screen which appears.
Now, you should have a screen showing something like this,
Spoiler ([Click to View](#)) 
8. Linking the bot with your panel

You will be able to find two lines declaring ..panel = "http://yoururl.com/webpanel/".. Obviously, edit BOTH of these.

Also, you can change the Mutex, be free to bash your keyboard!

Now you can change your interval, this is how often (in minutes) your bots receive their commands, less than 5 minutes is highly unrecommended.

Save your work, and hit File>Make Final.exe

8. Bot Complete

Congratulations, your µBOT Botnet is successfully complete!

Now to spread that bot!

I suggest getting [Chrome Crypter 2.7](#) to stop your file being detected.

9. Spreading

To spread your bot you can use several techniques:

Youtube

Example: Make a believable Youtube tutorial on how to DDOS people, whilst having a "hot chick" background which will attract zombies just by the look.

Chat Roulette & Omegle

E-Whoring ;)

Download a suitable fake girl video here: [Download](#)

And a way to show it! [Download](#)

Yahoo & MSN

Yahoo & MSN messenger chat spammers,

"Free Webcam hack, download now, only 12 downloads left!"

Email

Get hold of a good email spammer, have something creative in detail such as "You're AVG license has expired, download update.exe".

Porn!

Example: Link a download to a fake video displaying a codec error on your webpage, named "X-Codec.exe".

10. Round Number! All Done!

Thanks for reading, hope it came to use!
Please leave a thank if it does help!

First contribution to HF, hope you're all satisfied O.O

p.s. Its recommended to do the cron command frequently, or just before you check your clients.
Cron Command:

Code `/usr/bin/wget http://yoursitehere.com/yourpanel/cron.php >/dev/null`

Before i get a flame... They all source files, i don't really need a virus scan. But if needed, just ask without flaming please :)

(Jan 13, 2012 02:44 PM)Adzz Wrote: [\[CITE\]](#) Thanks for making a nice guide to setup and spread uBot :), i can confirm this is how you would set it up :P
Didn't quite expect one of the creators of uBot to reply :o

Is uBot no longer being developed by Kript0x?

Adzz - January 13, 2012, 3:33 pm

(Jan 13, 2012 03:55 PM)Zinkii Wrote: [\[CITE\]](#) Didn't quite expect one of the creators of uBot to reply :o

Is uBot no longer being developed by Kript0x?

uBot is no longer being developed by either of us, we are now working on Cloud.NET, a project we hope to revolutionize the HTTP Botnet market, we hope to release a few screenshots soon

.Zink - January 13, 2012, 6:22 pm

Very nice, how much would you say Cloud.NET will be priced, on estimate?

Also, any chance of getting a link to this thread from your original uBot thread? Thumbs up

Adzz - January 13, 2012, 11:31 pm

(Jan 13, 2012 07:22 PM)Zinkii Wrote: [\[CITE\]](#) Very nice, how much would you say Cloud.NET will be priced, on estimate?

We havent decided on a price but for its features and the current market, the price will be appropriate. and yeah ill add it now :)

.Zink - January 14, 2012, 12:29 pm

(Jan 14, 2012 12:31 AM)Adzz Wrote: [\[CITE\]](#) We havent decided on a price but for its features and the current market, the price will be appropriate. and yeah ill add it now :)

Fair enough...

With the look of your uBot, I'm totally sure that Cloud.NET will be extremely good.

And cheers buddy! Hope it comes in handy to some people rather than sinking to an archive.

ThalIncredible - January 14, 2012, 12:58 pm

Well so every commands works?

Since you say fixes are done.

Adzz - January 14, 2012, 1:19 pm

(Jan 14, 2012 01:58 PM)ThalIncredible Wrote: [\[CITE\]](#) Well so every commands works?

Since you say fixes are done.

all the commands originally worked aslong as you gave it in the correct syntax

ThalIncredible - January 14, 2012, 1:21 pm

Sounds great got it setupped, everything working when i executed on myself.

[img]http://screensnapr.com/e/I9DjpE.png[/img]

What i write here?

and cron job is updating the clients to see if they still are online?

Adzz - January 14, 2012, 1:27 pm

(Jan 14, 2012 02:21 PM)ThaIncredible Wrote: [\[CITE\]](#) Sounds great got it setupped, everything working when i executed on myself.

[img]http://screensnapr.com/e/I9DjpE.png[/img]

What i write here?

and cron job is updating the clients to see if they still are online?

what is the directory your panel is in, for example if its in the panel directory you enter /panel/cron.php

then change minutes to 30

ThaIncredible - January 14, 2012, 2:13 pm

Oh well.

I did exactly what u said waited more than 30minutes, but the last check haven't changed from the first execution.

Adzz - January 14, 2012, 3:07 pm

(Jan 14, 2012 03:13 PM)ThaIncredible Wrote: [\[CITE\]](#) Oh well.

I did exactly what u said waited more than 30minutes, but the last check haven't changed from the first execution.

if the last check hasnt changed it means the bot hasnt visited yet

jack202 - January 14, 2012, 3:11 pm

can any one tell me if it is safe no BACKDOORS

.Zink - January 14, 2012, 5:48 pm

(Jan 14, 2012 04:11 PM)jack202 Wrote: [\[CITE\]](#) can any one tell me if it is safe no BACKDOORS Dude, it's the source code, check for back doors yourself...

Also, yes it is safe.

koshal9 - January 14, 2012, 7:05 pm

ToastyStoemp

Erm, your website is already being under review...

Next time you sign up for an account there, before uploading the webpanel, upload a phpBB forums or something, so it looks legit. and have your panel mixed into the settings of you forum, just to hide it a little. SPAM.net check manually, so they wont check every folder for a forum.

imTemplaR - January 25, 2012, 11:31 am

turkey744 - January 25, 2012, 11:44 am

Step 8, what url do I paste @ panel?? My infected thingy doesn't infect people.

.Zink - January 25, 2012, 12:14 pm

(Jan 25, 2012 12:44 PM)turkey744 Wrote: [\[CITE\]](#) Step 8, what url do I paste @ panel?? My infected thingy doesn't infect people.

The URL of your webpanel.

So if your website is www.botnet.com
and your panel is in the folder "panel"

Then the URL would be "http://www.botnet.com/panel/"

turkey744 - January 25, 2012, 2:36 pm

I really can't find anything with panel in it. Tried every map(public/css/inc). Where the hell is panel?

ForTheWinFTWForTheWin - January 25, 2012, 4:10 pm

I can say all the downloads are safe, but 1 question.

I'm and absolute noob so i need to know how to control my bots once they are infected.

Also Chrome Crypter says servers down or something...

.Zink - January 25, 2012, 4:56 pm

(Jan 25, 2012 05:10 PM)ForTheWinFTWForTheWin Wrote: [\[CITE\]](#) I can say all the downloads are safe, but 1 question.

On your webpanel, you will have options on the "Task Manager" tab.

It's as simple as it looks.

Download & Execute - does exactly what it says. Just enter a direct download link, and it will download & execute that file (hidden)

Same goes with visiting webpages.

ForTheWinFTWForTheWin - January 25, 2012, 5:59 pm

(Jan 25, 2012 05:56 PM)Zinkii Wrote: [\[CITE\]](#) On your webpanel, you will have options on the "Task Manager" tab.

You may have an old installation of PHP.

(Jan 26, 2012 06:11 AM)turkey744 Wrote: [\[CITE\]](#) Help me? I really can't find anything with panel in it. Tried every map(public/css/inc). Where the hell is panel?
Your panel is the main folder, containing all the files for uBot.

If i uploaded all my files to <http://jimmy.com/this/>

The panel would be "/this/"

So in your VB6, you would refer to your panel as <http://jimmy.com/this/>

As it won't just know where it is, all by itself.

Doseon - January 26, 2012, 8:07 am

Wow very nice tutorial and support to get people started.

brandon1982 - January 26, 2012, 9:05 am

nice tut. but ubot havent ddos comand so no sens o use it!

(Jan 26, 2012 10:05 AM)brandon1982 Wrote: [\[CITE\]](#) nice tut. but ubot havent ddos comand so no sens o use it!

Not all botnets are for DDoSing, µBOT's purpose is spreading.

If you're wanting to DDoS with µBOT, write a dos script, upload it somewhere, and make all your clients download & execute that file.

globemasters - February 3, 2012, 7:35 am

```
$query_1 = mysql_query("SELECT COUNT(*) FROM clients ");  
$item_count = mysql_result($query_1, 0);  
$query_1 = mysql_query("SELECT * FROM clients ORDER BY id ");
```

Every thing is ok but i am stucked here

SPAM does tend to mess up a little with this, I suggest using a good provider. Either that, or you could ask for an update on MySQL & PHP5 if it's not SPAM.

I only used SPAM for tutorial purposes.

Firefox217 - February 28, 2012, 7:32 pm

I don't know if it is just me, but the uBot download link isn't working.

wokitoki - February 28, 2012, 8:12 pm

@up:

Its working.

Can someone post commands? Im newbie in this

NUFC - February 29, 2012, 3:38 am

Hi thanks for the tut the php side of this is very easy to do but when it comes to compile the exe i always get the same error and seen that other people had this error also. Could anyone tell me why i keep getting the following.

Compile error can't find project or library. and it refers to "Panel ="

Any help would be great thanks.

NikeBoy6 - February 29, 2012, 10:32 pm

very very nice i like it very useful tut keep up the good work mate
i needed one more post to hit 10 so thats why i post this off topic post haha

tomthebomb80 - February 29, 2012, 11:22 pm

Good Guide!

How would i make the fake-porn video on a website. I'm not quite sure where i would start on that one, but i can do every other one fine.

Thanks for the share!

lprh_mcr - March 11, 2012, 6:03 am

nice one bud!

ill vouch for its stability!

Nemulus - March 13, 2012, 7:14 am

For some reason, probably just me, whenever I try to get to the uBot download link, it comes up dead.

P1rat3 - March 17, 2012, 8:07 am

great work,i got it to work the first time. Quick stupid question tho,"Now you can change your interval, this is how often (in minutes) your bots receive their commands, less than 5 minutes is highly unrecommended." this is how long it take for it to go to a webpage or download and execute after hitting send on the task manager page right?

Anonymous6562 - March 17, 2012, 8:26 am

link doesnt work fuck u faggot i hope u die

ToxDz - March 18, 2012, 2:28 pm

hmm nice but could you explain more spreading methode

.Zink - April 12, 2012, 10:04 pm

Sorry for the late reply, but yes that would be correct.

Rageki - April 17, 2012, 7:27 am

Hmm, that is a lot of work, but I will give it a try

PersonAnonymous - April 17, 2012, 8:30 am

I like the part about spreading! Good job!

TTGBEANHEAD1 - April 17, 2012, 5:52 pm

i dont get this why would you bother vuiliding it when flulie booter is boss

sorry huys dscard that last tread this is a great post and very helpfull to the nobbs on bootin

bean headim new?

Blackberry boy - April 23, 2012, 3:16 pm

awesome works...

keep it up..

thanks for the ubot :)

Tall Hulk - June 5, 2012, 8:38 pm

im having some problems. can you help me? thanks in advance

vixenwarcraft - June 6, 2012, 2:17 am

???? - June 6, 2012, 9:12 pm

Something smells fishy.

Can anyone vouch this is safe?

```

I lolled.. anyone know why the page displays this?

You either need to install PHP if you're doing it on a VPS.

OR, you need to enable PHP Short Tags.

(Jun 6, 2012 09:12 PM)ILoveToHaXoR Wrote: [CITE](#) Something smells fishy.

Can anyone vouch this is safe?

The creator of the scripts has vouched above. :) (If that helps)

Very nice Tutorial and support to get people started.

Thanks

Koenyahh - August 9, 2012, 3:38 am

This is so freaking awesome!!
I tried like 10 php botnets, this is the only that looks promising so far :)

But I can only find one declaration of the Panel.

Quote:You will be able to find two lines declaring ..panel = "http://yoururl.com/webpanel/"..
Obviously, edit BOTH of these.

Is this a problem?

knoble - October 3, 2012, 7:29 am

PM me if some 1 can help i will give tv info thanks :)
Hey fella, sorry to inform you. But it looks like you have two errors.

1. You're password is incorrect for your SQL connection.

2. Your PHP "might" be out of date, contact your hoster & make sure it is up to date. If your hoster is a free service, try looking around in the settings, there may be an option to use different PHP versions, make sure you select the most recent version.

Sorry for the late reply.

s0vietstr1ke - October 8, 2012, 2:26 pm

haha I love this bot! I remember downloading it back in december, making some modifications to it and infecting my entire school network with it. It had some awesome features, like USB spread, UAC disable, and things, but eventually it got detectable and that was no fun. if anyone wants their friends' computers taken over but can't compile it correctly on VB6, PM me and i'll give you info about what I can do for you!

also, why shouldn't you do the interval under 5 minutes? I do mine at 60 seconds...I assume it's because of the traffic generated.

chronical - October 9, 2012, 6:51 am

Thank you for this tutorial will use spread technique soon.
Thanks, Chronical

antabuz - October 11, 2012, 1:42 am

Thanks for this tutorial! Ive read it and it seems pretty helpful. Will test it out when i get home.

Just got your PM by email.. Not been on here for ages.

By looking at the error you're getting, it looks like PHP isn't working properly, make sure that you have the latest version.

Other than that, the Geo Locator may be corrupted, try re-uploading the files (for the locator).

justlurking - January 15, 2013, 2:00 pm

Thanks for this :) will test it in a second

Lol7575 - March 18, 2013, 1:04 am

Just so you know, the default password for MySQL databases is null, not root.

[H]ell - March 18, 2013, 10:45 am

Someone could easily hack any server running uBot by firing a SQLI attack against run.php.

Also in includes.php you presume that all files are in place at in ip_files.

Code include("ip_files/".\$numbers[0].".php")

Change that to something like:

Code if(!@include("ip_files/".\$numbers[0].".php"))exit("Failed to include

'ip_files/'.\$numbers[0]}.php");Thats safer than letting script give errors and revealing paths.

Would be even better to write a backup function incase a file isn't found.

This part in run.php is vulnerable for sql:

Code \$botid = \$_POST['id'];

\$bottest = mysql_query("SELECT * FROM clients WHERE id LIKE '\$botid'");

Probably some more bugs, but the last one is the most serious.

StormerJack - March 18, 2013, 12:08 pm

I ran the final.exe to test it but it doesn't add me to the bot list

[H]ell - March 19, 2013, 9:50 am

(Mar 18, 2013 10:45 AM)[H]ell Wrote: [\[CITE\]](#) Someone could easily hack any server running uBot by firing a SQLI attack against run.php.

lol123lol - September 18, 2013, 5:16 pm

Nice Post i will def try this tomorrow! :D

imahacker97 - September 19, 2013, 6:22 pm

where is the register option on this? im the admin and i cant login lol im such a retard at this shit. Great tut though! hopefully someone helps!

.Zink - September 24, 2013, 12:58 pm

Guys, this thread is ridiculously old. I think you might want to have a look into Cloud.NET if Adzz still went though with developing it.

I mean heck, they might have moved on from that even.

IGotHacks - October 2, 2013, 5:41 am

Thanks for Uploading and writing such a nice tutorial ! :) Wasnt really anything new for me but even the downloads are worth it !

XperiaZ007 - October 2, 2013, 2:41 pm

Thanks to thread owner we all appreciate you efforts

.Zink - October 15, 2013, 11:22 am

Thanks for the appreciation i guess, but the real thanks is really towards Adz.

And I'd like to correct myself on my previous post about Cloud.NET...

(Apr 16, 2011 02:50 PM)Adzz Wrote: [\[CITE\]](#) Files have been re-uploaded:
http://www.4shared.com/rar/PrBeKWUs/uBot_Sauce.html

I have discontinued support and updates for this project.

Since µBot, I have been wanting to develop a new bot, faster, more stable and more powerful than any other bot free or on the market. And I wanted to make it open source.

Initially I planned on developing Cloud.NET (before its temporary merger with Black Trinity), it was designed from the ground up, primarily using jQuery, HTML5, CSS3 and PHP. It was designed like some of the classic botnets, using a desktop like experience. We were close to completion but... I moved countries and due to the country being firewalled i stopped development, I did pick up the code here and again and was still in touch with my old development partner but i never really got back into development of it.

After a while we decided to start developing a new bot... "µBot v2" - it was looking amazing and some of the features we had planned were really gonna change security for botnets (sub panel support, encryption between bot and panel, ssl support and basic p2p support so that in the event of main panel closure, all bots could be set to a new panel with a button press), however again,

development slowed and ultimately stopped.

I do see myself redeveloping one of these bots and releasing it, but not at the moment... to much going on right now. All I can say is, keep an eye out, it'll come...

-Adzz

Please see the original thread to stay up to date with what's happening & when - <https://hackforums.net/showthread.php?tid=1218659>

danielav - December 21, 2013, 1:53 pm

Do you know what features this bot have?

Dedicated007 - April 2, 2014, 5:38 pm

link down please reupload, I have a lot of error while compiling the bot in vb6, I don't know how to fix, hope your fixes already apply to these issues

Kade4530 - June 9, 2014, 11:42 pm

Then recommend me a better free HTTP Botnet.

Exactly, there's a few to none left that work.

Damasu - December 16, 2014, 4:27 pm

Does this botnet still work or is it too outdated?

natsirt21 - December 24, 2014, 3:29 am

dead link, this bot is pretty good

thank :)

mind_freak - January 21, 2015, 6:04 am

Sorry for grave digging, but can you help me setup the builder?

anandkumar - May 25, 2015, 5:13 am

the download page says file removed

sam1902 - June 26, 2015, 7:58 am

I've an old link, tell me if it's a virus, I'm not sure about its integrity but there it is:

aHR0cDovL3d3dy5tZWRpYWZpcmUuY29tL2Rvd25sb2FkL2FpY3ZjOWVvZ2dkeDYzZy9ib3RuZXRzJTl4MiUyOS5yYXI=

It's a base64 encoded url because I can't post url otherwise (restriction).
Decoders are on google

Henrybot - September 3, 2015, 2:58 am

I realize the thread is 3 years old, but thanks for the guide. I was able to set it up with few problems. My only questions are:

1)

Quote:8. Linking the bot with your panel

You will be able to find two lines declaring `..panel = "ht.tp://yoururl.com/webpanel/"`.. Obviously, edit BOTH of these.

I was not able to find two of these lines to edit, only one. Am I blind or is the guide wrong?

2)

I'm receiving errors on my web panel. I think it may be because I do not yet have any slaves/zombies. The errors are related to files that the guide made no mention of editing, and the Boolean values seem related to the number of bots. But I am completely unsure.

Quote:Warning: mysql_num_rows() expects parameter 1 to be resource, boolean given in /home/r3s10/public_html/inc/html_menu.php on line 7

Warning: mysql_result() expects parameter 1 to be resource, boolean given in /home/r3s10/public_html/clients.php on line 11

Warning: mysql_num_rows() expects parameter 1 to be resource, boolean given in /home/r3s10/public_html/clients.php on line 14

Rory Guidry - September 3, 2015, 12:27 pm

This is garbage just like all malware on this forum.

Henrybot - March 29, 2016, 2:51 pm

I previously had this working and lost access to my Gmail account so I was going to remake my uBot.

The original download link looks maliciously edited;
SoftwareUpdater.exe. Can anyone confirm?

MasterxMind - April 28, 2016, 4:52 pm

agreed it really is. hotlinebling

.Meh. - April 28, 2016, 5:53 pm

Nice job man! I havent seen uBot in a long time. I wont be setting uBot since i already have PlasmaHTTP being ran, but I will keep the source files for a rainy day!

Thanks a ton!

Sorry guys. Didnt mean to grave dig this. Someone had just replied. didnt recognize how old this thread was until i had already replied :3

C0k3 - April 29, 2016, 3:41 am

I used uBot along time ago :) Nice to see it back.

WOUALAS - February 9, 2017, 8:25 pm

IT IS A SCAM I THINK ..BECAUSE THE SITE WHERE YOU HAVE TO REGISTER CREDIT CARD SEEMS LIKE A PHISING PAGE;;
SORRY BUT IT STINK

????

MrGambler - February 10, 2017, 2:17 am

if i didn't wrong OP was working on newer version?

sk8515 - February 10, 2017, 6:13 am

sweet thanks , im going to give this a shot

sartrecamus - November 18, 2017, 1:45 am

The link dead can you send me new link?

.Zink - January 6, 2018, 10:29 pm

I no longer have access to the source, not used it in years. However it was never garbage, as some proposed on this thread...

Follow up on Adzz if you want to stay up to date on his works, he was the developer of μBOT.
