Ok so today I will show you how to make a simple signature :) I am not pro, but I do not think I am bad either.

render:<http://imageshack.us/photo/my-images/163/renderresidentevilopera.png/>

End result :

So first start off with a transparent background 400 by 150 is what I used.

Next we are going to paste your render(I will have a link to the render I used and other stuff there too)

I re-sized the render here If you don't know how to do that click edit->transform->scale then hold shift while scaling to keep it even.

You are going to want to copy this layer 4 times to do that hold Ctrl then click J 3 times. Hide the top 3 copy's by clicking the little eye beside them.

Now go to your second copy and click edit->transform->Flip horizontal and then merge down and you should get this:

Copy this layer again with Ctrl-j so you have this:

On the bottom copy we are now going to go to filter->artistic->rough pastel and the end should look like this:

[IMG]<http://img690.imageshack.us/img690/8485/47810907.png>[/IMG]

Now on that layer go to filters->render->clouds and click ok and you should get this:

[IMG]<http://img269.imageshack.us/img269/9813/56482238.png>[/IMG]

Place the cloud layer under the other copy like so:

Next on the other copy we are going to lower the opacity like so:

Really Not one comment. It's really annoying it took time to make this.... -.-
