Thread: [\[Tutorial\] ClientMesh / No-IP \[Tutorial\]](#)

Olympia - January 17, 2012, 8:14 am

Hello there everyone this is my first tutorial I hope you all enjoy, thanks!

RequirementsClientMesh.

The ability to port forward.

A No-IP Account.

Windows 2000, XP, vista, Windows 7.

Internet.

No-IP Account Setup

- 1) Signup to No-IP here <http://goo.gl/7fvHT>
- 2) If your IP is Dynamic download the Client and login. Spoiler [\(Click to View\)](#)
- 3) Click "Add a host". Spoiler [\(Click to View\)](#)
- 4) Give your host a name. Example: Culprate.zapto.org etc Spoiler [\(Click to View\)](#)
- 5) Leave the DNS type on DNS Host(A)
- 6) Now click "Create Host"
- 7) You have now finished!

ClientMesh Setup

- 1) You will receive you account info and download link through the email you chose.
- 2) Download ClientMesh.
- 3) Extract ClientMesh using WinRAR to the desktop.
- 4) Install ClientMesh and login with your details.
- 5) Once you have logged in click "Client Creation.
- 6) Click general and fill out the settings with your information but the leave the port the same. Spoiler [\(Click to View\)](#)
- 7) Click "Create" Leave the settings the same or change(Optional) now save profile.
- 8) Build your Client to the anywhere you like. Spoiler [\(Click to View\)](#)
- 9) Click "Server" and use the password + encr key you used when creating your client also use port 3467. Spoiler [\(Click to View\)](#)
- 10) Start you server.

Portfowarding

Test if UPnP works, if it works you will not need to port foward

- 1) Open Command Prompt type 'ipconfig' and enter.
- 2) Check what number your IPv4 Address ends in (mine is 4). Spoiler [\(Click to View\)](#)

- 3) Open up your router page and find the 'Port Forwarding' section.
- 4) Copy the settings I use but use your own IPv4 Address. Spoiler ([Click to View](#))
- 5) Visit <http://canyouseeme.org> to and check the port 3467 is open.
- 6) If the port 3467 is open then your done.

Spreading your server

- 1) First you will need to Crypt your server so it is fully undetectable.
- 2) Upload you server to www.Filehold.net
- 3) Make people download your server (Torrents/MSN etc).
- 4) Enjoy your Victims and have fun with them.

If you need help feel free to PM me and I will message back as soon as possible, thanks!

Rock3r™ - January 17, 2012, 8:23 am

Nice and neat. But I don't use Clientmesh.

Josch - January 17, 2012, 8:24 am

Good tutorial, will help people using ClientMesh for the first time.

Predator_Crack - January 17, 2012, 9:59 am

Nice tut you have here op. I think it will help more and more people that using; that private rat although there is already a good support for anything that is occured around that. I think you mention most of the important steps so just keep that updated if anything needs to be added later.

Regards

Thanks, what do you think I need to add?

Predator_Crack - January 17, 2012, 10:47 am

For now you are ok. I mean, to keep that fresh for anything that comes out and need to be added. For example, tomorrow a big update comes and some basic function change. Then you need to update that. That is what i mean. You are fine :)

Olympia - January 17, 2012, 11:14 am

Ok thanks, will update this thread..thanks allot boss!

Open Source - January 17, 2012, 11:36 am

pretty gud TUTO mate..Nice work :)

BTW am not using CM RAT...bcoz dark comet well suits for me and its free too :D

Olympia - January 17, 2012, 12:16 pm

Glad you all like this, thankyou very much!

DNB - February 1, 2012, 12:27 pm

Nice tutorial man.

If anyone want to buy ClientMesh RAT let me know & I will give him special Discount. xD

DNB's a verified reseller and co-owner ^^

Prime - February 21, 2012, 3:06 am

Make a new tutorial about Clientmesh v5 :D

Necro Space - May 12, 2012, 3:09 am

cant get it to start after the terms and conditions scroll down i click agree and it comes up with the login and wont allow me to type anything in the disapeers :(

Just install it again, pm me your TV info if you want help :)

DWStorm - May 13, 2012, 4:14 am

Hey,

Urm, how do I get to the crypter and pass recovery in v6? I can't find it anywhere!

Thanks :)

-Dave

Clean and easy !

Very good job for a first tutorial.

Keep up the good work ;)
