Thread: [Sparky, Galaxy or Foxy?](#)

mamaluke - January 18, 2012, 4:59 pm

What JDB generator is the best right now? Please tell me how the updates, UD rates and support rank if you bought the product because im about to purchase one.

Cloud9™ - March 3, 2012, 5:16 pm

I update mine the same day, take a look through the sales thread. PM me if you need any help.

Onetwo - March 3, 2012, 5:18 pm

They are different products. For example, Foxy is a JDB file-generator, whereas Sparky (which is now called Code Execute, and includes a crypter with the JDB) is a tool that hosts it for you, and all you have to do is clone and upload a server, and spread the link.

Cloud9™ - March 3, 2012, 5:38 pm

(Mar 3, 2012 06:18 PM)Onetwo Wrote: [\[CITE\]](#) They are different products. One way of looking at it.

Quote:You'll need a place to host the JDB. Since AntiVirus are now detecting websites with malware and blocking them, this actually makes it faster for you to get detected and makes your infection rate go down dramatically. If we bought 30 domains and we have 500+ individuals running malware on these domains, it would get blocked faster. We would have reports from our hosting, get shutdown, and your product will basically be useless until we get it back up. Thus, it is really pointless for us as well as you to deal with this.

A lot of other sellers offer free hosting, but our experience is that it is best just to have you buy your own hosting. If you actually look through a lot of the threads of other sellers, you'll see that either they've had to move to a different hosting company, got shutdown, or are down for more than a week. We may have downtime, but the problems we're having with our hosting are actually not related to our product at all. As you can see, we are making backups of the website just in case it goes down. As well as backups, we're also going to be making an offline version.

It may be awesome at first to get free hosting, but in the long-run it really has an impact on you. Antivirus companies are getting smarter and faster at detecting malware. Staying under the radar is what we wanna do to keep our product online and available to you. Spending an extra \$10 for a domain + hosting is not the worst thing in the world, since you'll be in control instead of us. By us offering you free hosting, we're in control and you have to rely on us. We want you to have the control, so we're not at fault when shit (excuse the language) hits the fan.

We really hope you understand how we're doing things, but we wanna keep the product online and healthy. We've already gotten our foxysoftware.com blocked by ESET, we really don't want to be shutdown. This is why we had to make the Java Drive-By not do call-backs to the main website, just for that reason and that reason only. Now that the Java Drive-By and the main website are separate, we can guarantee 100% up-time for the Java Drive-By.

An example of how the antivirus block the Java Drive-By would be:

1. Visitor goes to www.thisisnotavirus.com that contains a Java Drive-By.
2. After about 100 or so people get infected from that site, ESET or another antivirus block this site.
3. Now all customers are effected, cause that site got blocked and now the infection rate just decreased for everyone.

How do we know this? Well, our older version did call-backs to our main website and ESET caught on and decided to block <http://www.foxysoftware.com>, thus the Java Drive-By couldn't do a call-back to the site and would just shutdown due to the fact it couldn't get instructions from our website. It will get blocked, even if the Java Drive-By doesn't do call-backs. Why? Cause like stated above, antivirus companies do keep track of which sites their customers visit and are getting infected from.

Jagex is actually one of them that will report your site to your hosting for having a Java Drive-By posted on your site directed to Runescape players. This has happened many times and will continue to happen and there really is no way for us to block it, besides changing hosting. It doesn't mean Java Drive-By's aren't great spreading tools to use, cause they really are. You just need to be smart on how you're going to spread and how you're going to go about it. Don't get me wrong, there are a lot of different spreading methods out there and there are many different ways on how not to get caught.

I hope this answers your question and anyone elses questions on why we don't offer free hosting and why we will probably never will. Why pay another \$5 just for a domain and hosting that is being sold to someone else, when you can pay \$10 to get your own? I'd rather have my own domain and hosting, instead of relying on someone else. Thank you for reading and I really hope you learned a lot from my essay on why!

I'll be offering more though.

Galaqtic - March 3, 2012, 5:40 pm

Foxy jdb is the best in my oppinion, been using for over 8 months now. Made the cash back in no time.

m4dh4ck3r - March 3, 2012, 11:10 pm

I NEVER HAVE TO UPDATE BECAUSE IT NEVER GETS DETECTED :P
Almost 5months since launch..No Detection .

I have 2 Years of experience in Webserver Management and know a lot of stuff about Managing websites.Anti-Virus's has not detected ANY of my website for Malware.Over 130 Customers are spreading with 15 Domains.You can imagine the traffic.

I have had only 5Minutes of Downtime (for an update) which was announced.
I don't get shutdown because I use a Dedicated Server and not shitty hosting.

If you are a Newbie and want to start I suggest you go for Sparky Java.
If you know how to setup a JDB and want the files I suggest you go for Foxy Java.

JSTN - March 4, 2012, 2:45 am

It's not hard to select 3 files and click upload. And you can have more freedom with foxy by using your own domain.

hxkd - March 4, 2012, 3:49 am

I'd say Galaxy as I know Alex is an amazing code, and I've bought it from him and had no problems.

hxkd

m4dh4ck3r - March 4, 2012, 3:57 am

(Mar 4, 2012 03:45 AM)Seattle Wrote: [\[CITE\]](#) It's not hard to select 3 files and click upload. And you can have more freedom with foxy by using your own domain.
I never said its hard to select three files and upload :).

Sparky Java customers can use their own domain too :|
Where do I mention it can't be used ? o.O

Alex™ - March 4, 2012, 4:07 am

I'm not even going to post about my jdb on this thread lol.

Its old as fuck and this is just full of sellers posts.

Cloud9™ - March 4, 2012, 8:57 am

Thats funny, why does eset and malware bytes detect your sites? Proof:

Download Execute:

1. <https://i.imgur.com/soMu0.png>

2.

<https://www.virustotal.com/url/b9373bdd92d1eda469bb2f3a69ea89b6f8186abc31c52108769a8867baec253c/analysis/1330883487/>

Spark Java Domain:

1.

<http://support.clean-mx.com/clean-mx/viruses.php?domain=sparkyjava.in&sort=firstseen%20desc>

Other Domains on the same IP:

1. http://www.malwareurl.com/ns_listing.php?ip=204.152.255.249

All these domains are blocked by ESET, OpenDNS, Malware Bytes, and others. Your product is not

a true FUD ?.

There is more... Not detected?

[H]ell - March 4, 2012, 1:10 pm

I know this thread is old and all but seriously, m4dh4ck3r you have no fucking clue what your talking about.

Seriously, you have 150 people spreading?

Big fucking whoop.

Vuzia did well over 50,000 successful loads a week (meaning the application was downloaded AND

executed).

FYI: That is well over 300 infections a hour.

That isn't even counting the amounts of hits sites hosting the drive by got.

You think you're all big and shit, saying that your stuff will NEVER get detected.

Wait till you roll around the big boys, you will talk differently about the shit you're doing right now.

I am seriously sitting in front of my computer laughing at how you're digging your own products grave, by hosting everything yourself.

You limit yourself to growing bigger, because your shit will get detected once you hit a certain mark.

Please take your product of sales, and go play with legos a bit longer before entering in something like this.

Cloud9™ - March 4, 2012, 1:51 pm

Well there is a huge leap between knowledge in both parties.
madhacker wants to roll with the big guys, while he isn't 100% sure about what he is doing.
He knows how to download a file on someone's computer using java.
He knows how to sign the applet.

But he doesn't know about handling huge amounts of requests to his servers, because he never had experience with it.

He doesn't know how it is to have hundreds of people using his software.

And yet he is trying to compete with the others.

If I were him, I would just respect the other sellers, and learn from what they are doing.

Thats way more useful than what he is doing now, bashing on others. Saying his is best.

That is why jhfire and other sellers flame him. And I dont blame them.

He isn't a fair competitor.

m4dh4ck3r - March 5, 2012, 6:58 am

LOL. I only talk about my product.I defend my product. I've always recommended Foxy Java for people who want to use a drive by generator .

I dont handle it alone I have 6 Support and a right hand .

and FYI I do have 100s of customers .

Stop making False Statements. You have no idea how this works.
This is your free hosting's IP. How else is there 8 domains that point to one IP?

You deleted my posts I see. Well, sorry to tell you, but these are not under any kind of "rule". This information is public and can be found on Google with a few searches. If this post is removed I guess I could make a dedicated website for all this information and have it linked to my main website. Could be a possibility, but lets not push the luck when you know as well as I know the information I am posting is information people need to know about.

- This is not the source to your JDB.
- This is not your dox.
- This is nothing related to you as an individual.

Thus, there is no reason for this post to be deleted.

The IP that was mentioned before (which is the free hosting's IP) shows this:

[img]http://screensnapr.com/e/uGePWg.jpg[/img]

This is the Sparky Java log in page I'm guessing to access your main control panel, where you can generate your JDB.

You say you allow your customers 15+ domains, yet I only see 8:

[img]http://screensnapr.com/e/IIBY5T.jpg[/img]

This picture does not show the full domain names, thus it is nothing related to personal information.

Why don't we look deeper into these domains/IP and see if they're truly "FUD" or "not blocked" by antivirus.

Your free hosting's IP on VirusTotal:

[img]http://screensnapr.com/e/gaZGps.jpg[/img]

Only two antivirus catch your free hosting's IP. Well, lets go further into detail.

Your free hosting's IP on <http://support.clean-mx.de>:

[img]http://screensnapr.com/e/uvXN0a.jpg[/img]

Your free hosting's IP on <http://malc0de.com>:

As you can see, multiple sites see your free hosting marked as malware. That means Malware Bytes and NOD32 have blocked your website from anyone that views it. Which means, your customers cannot use their product to its full potential. Let me run your product by you:

- Free hosting: Why have free hosting when it is blocked by antivirus? You just dropped your customer's infection rate.

- 50 Installs: You'll get 50 and then I'm sure they'll be bot killed.

- Free Crypt: You said 150 people use your product? I'm sure you can guess where I'm going with that... Basically means it will be unFUD the next day.

Now I understand why you wont allow your customers to use their own hosting. It would be way to much work for you to reFUD the JDB. You'd have to go around c/p like no tomorrow. I'll side on [H]ell with this, you need to go back and play with your legos. Seriously, you act like king shit around here. Don't forget, you challenged me by not removing my product's name from your thread and acting like you actually had something. I may seem like an asshole to you, but I hate being disrespected by you. I've been here longer than you and I've been doing this longer than you. There is no reason AT ALL for you to EVER do this to anyone.

Silent drive-bys are call exploit packs and you're looking at \$200+ for about one month's use. Some of them aren't the best, but work great with a large amount of traffic.

(Mar 8, 2012 09:59 PM)jhfire Wrote: [\[CITE\]](#) Sorry man, but you share the same IPs with every customer of Sparky. I'd do your research next time.

I know you share the IP's I was saying the drive by IP seems to be different than the web panel. Also for the domains there's 15 now. Yep just checked the domain IP's are on another server. One that isn't black listed by anyone. So the web panel is not FUD but the host for the .jar is. ? Point is, Foxy = semi-advanced user.

Sparky = anyone can use.

Jhfire, How about you give out a one day review to someone that has sparky so they can compare the drives by infection rate in a one day spread, Along with all the features. They can then write a review for both products. After all you have nothing to lose. You may even gain a new customer and a bad review for sparky and a good review for your product.

Right, even though I have the product in my hot little hands. He did probably change the IP due to my detailed report that was t-bagging him. I've actually gotten many customers from Sparky already and many say it was a waste of \$25 due to the fact it is so limited with the features, hosting, and how it functions in general. As far as I'm concerned, Sparky is just a copy of any Java Drive-By out there. Only difference is that he offers free hosting. Woopie, I can offer free hosting too and I'd say after that it is game over. Which I intend to do as well as revolutionize the way Java Drive-Bys work. Is Sparky doing this? Nope, cause unfortunately from what sources tell me Sparky owner only knows about 1 month of PHP coding if I stand corrected and less in Java coding. All-in-all it is a very limited product and the owner just hires people to do the work for him when he feels threatened or when he feels the need to try to gain an advantage against the competition.

Sparky is not threatening to me at all, I'm only doing this cause he acts like tough shit around here, acting like he is one of the big kids. Seriously, all I asked him to do was to remove my product from his thread and he refused cause I "didn't ask nicely". What I recall is I asked him nicely which was "Remove my product's name from your thread". After that he went ballistic on me and started challenging me at every turn. Now I'm throwing it back at him and he is pissed. I'm sure the vacation ban had a lot to do with what is going on in this thread. I'd recommend you read through the threads, since this has been going on through many different threads.

I do agree with the statement you made saying FoxyJava is for the semi-advanced user. Due to Sparky's decisions I'll be covering every type of user now. I even have a little setup for users to pick from to determine which type of user they may be. I'm going to be including video tutorials that will walk you through each step and tour guides as well. FoxyJava 3.4 is the new FoxyJava that will be including everything that needs to be added and free hosting will be launched in 3.5 as well as the new generation of Java Drive-Bys. After a few months when things settle down, I'll be looking into another form of Java Drive-Bys.

I've been doing this since the start and many of the features you see in today's Java Drives were in PixelJava, XclusiveJava, and now FoxyJava to begin with. After the release of 3.4 I'm sure you'll be seeing competitors grabbing the source and adding it in with their Java Drive-By. As I do remember it, I believe the very first one I sold for \$0.50 was the first Java Drive-By on HF to ever download a file in 100% Java, while others were using a combination of VBScript and CMD. I could be wrong about that, but I did try searching HF for that and never got any results.

This is what I don't feel the need to make an exploit pack.

Jim Newman - March 10, 2012, 12:15 pm

ROFL COPTER IM DONE. <33 SPARKY SUXS. I bought it and don't even use it anymore...simply ass.

Prince of Persia - March 10, 2012, 12:32 pm

(Mar 10, 2012 12:32 PM)jhfire Wrote: [\[CITE\]](#) This is what I don't feel the need to make an exploit pack.

Well an exploit pack consist of more than one exploit. If it was just one exploit such as the java rhino it would be nice. Most people don't update there java, they just ignore that popup that comes up so they are still prone the vulnerability.

iolaka - March 10, 2012, 1:26 pm

I can say that I bought sparky java, not liking it so much... you can't host files on your own host, it doesn't render images/color when you clone a website, it's been down for 12 hours straight, if 1 of the domains go down(ddos), all the domains including the panel goes down, hopefully it gets fixed soon... I like how it is FUD always, built in scanner, & they provide a few domains for you to use.

It made me lose a victim that would've made me \$150.(driveby was down) ?

I'm thinking of buying Foxy Java.

jinrowolf - March 11, 2012, 10:53 pm

Also Java.Rhino is essentially public now but it did get patched on update 29 I think. Blackhole is around 1.2K not bad for a exploit pack but only has around 13% rate pretty good ? Dig deeper into exploit packs and you come up with ones around 5K with a 30% rate Doesn't seem like much but when your getting up to 13K hits a day it makes the worlds difference.And java rhino is patched but around 90% of users don't have it updated or patched I find it very effective on getting people around a 40% rate for me. ?

Haters Ganna Hate - March 17, 2012, 12:57 pm

MY CONCLUSION

What im hearing is that SparkyJava allows their customers to host their JDB on a site. This is a huge problem, first of all, if there were 100 customers hosting their driveby on one domain and 1 person reports the domain to the AV and they blocked it....

B00M

You should not even allow your customers to do it in the first place, just put a .PDF guide on how to host it somewhere else. Pretend a customer is new to this and hosts his driveby on your domain, the domain gets blocked, angry customer. The angry customer posts his rant, along with others, your product goes down.

Trust me, just remove your free hosting and lower your price, you will get customers.

He can't do that. If he does that than it will become unFUD more often and he doesn't know how to program, so he would have to hire someone else to make it FUD. All he does is hire people to do the work and he just sells it. It is really sick and I'm really surprised people even buy his product

knowing that if those people were to just ditch him, the product they paid for is no longer going to work.

~zander - March 19, 2012, 5:24 pm

Well, I guess I'm going to be buying Foxy instead when I get back into all that keylogging and what not.

WarrioR™ - March 20, 2012, 1:43 am

hey bro.please contact me .i m going on sparky but today i saw your thread its hot and good.plz contact me in my mail id killer.lggjunior@hotmail.com i m still waiting your answer buddy

'Chief. - March 21, 2012, 10:27 pm

sparrky java just got owned i luv how he calls it a java drive by maker!

ahahah~!!@1

(Mar 10, 2012 02:26 PM)jolaka Wrote: [\[CITE\]](#) I can say that I bought sparky java, not liking it so much... you can't host files on your own host, it doesn't render images/color when you clone a website, it's been down for 12 hours straight, if 1 of the domains go down(ddos), all the domains including the panel goes down, hopefully it gets fixed soon... I like how it is FUD always, built in scanner, & they provide a few domains for you to use.

It made me lose a slave that would've made me \$150.(driveby was down) ?

I'm thinking of buying Foxy Java.

As far as website cloning goes, You would need to download every single image within the websites source page to render it 100% correctly, Or process the code that is ripped from the site to be cloned and add the domain of the site to all of the src directories for images, etc. It's because people use for example

Code rather than

Code

Well, AnonJDB handles well over 100 users and we don't have this issue. Although we offer both methods, download it or we'll host it for them.

Alex™ - March 26, 2012, 3:42 pm

Well done for bringing this stupid thread up were people just flame each other.

tobyhearne - *March 29, 2012, 5:18 pm*

Sparky is the worst JDB i've ever used.

I've infected a total of 0 in about 6 months.. Foxy Java on the other hand, i have infected about 350+ with it using exactly the same methods.

Sparky is the PROBLEM and it is rubbish, do not buy it. Sorry M4dh4acker but it's the truth and you know it deep down.

It's very very flawed.

Mr anonymouss - *October 11, 2012, 5:44 am*

is no work this web site krysonic pffff
