Thread: [I can't crack this hash? I'm sure it's a hash! \[Help\]](#)

Tacodevil - January 20, 2012, 5:04 am

So the hash is:

dc28fa0679235b2182f8c0059713771f

but when I try to use MD5 crackers, it says no information found D:

This is the admin's password and once I get the pass, I'll try a deface. Please help if you can Especially if it turns out not being a hash lol. Thanks

Good luck getting a deface in. I didn't look too hard, but what I did look at, I couldn't find an admin page. I hope you're secure and protected before you attempt to deface an american .gov website. If you do deface it, I'd recommend you don't claim you hacked it, considering me and a few other groups have already used vulns to harvest the information. I personally don't care, but the other teams may take offence to it.

I personally don't care, but the other teams may take offence to it.I know, I'm going to use ProXPN, with 3 other high elite proxies, delete ALL systems logs while using ProXPN to disable automatic system files, AND to top it off, I'm going to connect my laptop to Starbucks or some other place with free wifi so they cant track me ;)

Also I did find admin page for the .gov site. It was pretty easy, just use an admin page finder for CMD ;). I'm going to probably deface it to make it SOPA PIPA protest page.

ProXPN records everythnig you do and it's not very useful. And why would you deface for PIPA/SOPA it would just provoke them to push harder.

ProXPN erases every system log files logged on your computer within 15 minutes. Also ProXPN makes your IP linked to another STATE, not another block or county away. I am also designing my own deface page that will link the workers of the site to random crap lol

x0n_ - January 23, 2012, 6:35 pm

ProXPN may not leave logs on your computer, but the server you connect through keeps logs of your IP connected to them, which can easily be obtained by the government through means of the legal system. Considering that it connects you through a server in the US, the server can be confiscated and logs can be used in court. If you were going to deface any .gov site, I'd use use multiple connections through a botnet, connecting from computer to computer to cover your tracks. You may want to reconsider, I don't believe you know the extent of hacking the government.

WeedGrower - January 23, 2012, 7:37 pm

Guys, I'm telling you now, don't use VPN's. They might say they don't monitor you, but VPN companies such as Veralinx will COOPERATE with the law, and probably hand over your IP address and info to the Bureau. I advise you to use a SOCKS proxy.

Also, if you do commit cyber-crime, look at your state-laws so you know what your going up against if you get caught.

Happy Hacking.
