Thread: [\[TUTORIAL\] How to Untethered Jailbreak iPhone 4s & iPad2 \[WINDOWS\]](#)

Mewtw? - January 21, 2012, 10:50 am

Hello guys, here is the tutorial:

1) First, download this file:

Quote:https://sites.google.com/a/iphone-dev.com/files/home/cinject_0.4.3.zip?attredirects=0&d=1

2) Now, put the folder you downloaded into your C:\ drive.

3) On your computer, execute:

Quote:cmd.exe

4) When the command window is opened, type:

Quote:cd C:\cinject_0.4.3

5) Now, you need to type this:

Quote:cinject.exe -i payloads/jailbreak.mobileconfig

Once you typed this, you will see something on your iDevice, just click on Install and if it asks you for a password, just don't put anything and click on "Done".

[img]<http://www.redmondpie.com/wp-content/uploads/2012/01/Photo-1-21-12-9-01-52-PM.png>[/img]

6) Then write this on the same window for the execution and wait:

Quote:cinject.exe -j payloads

7) In the end, just execute this command:

Quote:cinject.exe -w

Then, go on your Settings, VPN and toggle ON. You will see that an error occurred. Your iDevice will reboot itself and you will see a Cydia application.

'Snorlax - January 21, 2012, 11:00 am

Just read this on RedmondPie, it's good ;)

angusburrito - January 21, 2012, 11:01 am

Thank god for this. I've been wanting to jb this thing forever. Thanks man. ^_^

Alpha Bruh - January 21, 2012, 11:08 am

I just did this yesterday, sadly you can't download many repo's yet :(

Mewtw? - January 21, 2012, 11:11 am

Why are you saying that ?
What do you mean ?

I installed all the repo's I had on my 3GS.

Agent Shark - January 21, 2012, 11:12 am

So is this tethered or Untethered and this will still give me Cydia and Installous right?

Mewtw? - January 21, 2012, 11:12 am

Yes mate :)
Don't worry, finally the untethred one is out ! :)

angusburrito - January 21, 2012, 11:23 am

Success! It works like a charm! Thanks again for sharing bro. ?

Did sinfuliphonerepo.com work for you?

Mewtw? - January 21, 2012, 12:02 pm

(Jan 21, 2012 12:39 PM)_broken Wrote: [\[CITE\]](#) Did sinfuliphonerepo.com work for you?
No and it's not his fault.
Sinfuliphinerepo is often down, it's not because of the jailbreak.
You can try to add any others sources, it will work.

Repos are not downloaded. They are added. The reason, you could not add those repos is because of the sudden wave of people on Cydia.

Nightmar? - January 21, 2012, 1:05 pm

When I got the error, my device didn't restore. I don't know what to do. Any ideas?

What do you mean? Is your device supposed to be restored?

Alpha Bruh - January 21, 2012, 2:47 pm

Don't need to do this anymore, windows version has been released.

Mewtw? - January 22, 2012, 5:05 am

Yes but it still works x).

Anyway, if you want some good Repos to add, PM me.

Magicpacket - January 22, 2012, 6:41 am

Or you cant just install Corona untether 5.0.1 in cydia ;)

h3h3 - January 22, 2012, 7:50 am

does this work with ipod touch 4g?

tooo short

Mewtw? - January 22, 2012, 8:52 am

Use the jailbreak for A4 devices for iPod Touch 4, not this one.

NOTEPAD - January 23, 2012, 10:41 am

I do this wrong can I brick my iPad 2 ? Anyone help me out?

Acura TL TYPE-S - January 23, 2012, 12:48 pm

I dropped my 4S today and the hard disk skipped because random things were deleted and not working. So i had to re-jailbreak the 4S which was an annoying process on windows.

Nice TUT.... Now this TUT was useful, since it was not as easy as the MAC version.
