Thread: [\[GET\] Automated Website Builder Script + Method](#)

nazeeb1 - January 21, 2012, 8:51 pm

Have been a little lazy lately so havent shared in a while but here is a my latest with a little method i use. Cool little website builder script that once installed will allow users to jump on an create a website for their biz in literally 3 minutes. I have used this script a few times and here is my little 8 step approach to getting the most out of it...

Build the website from the script.
Tweak it a little and personalize.
Get it ranking and get traffic flowing.
People sign up and get their own subdomain (alter script a little).
After a day, email them, ask them how its going & if they need help.
Also let them know that you offer cheap custom web design services.
Upsell them to a custom design package with their own domain.
Once you have built a website for them, upsell them into SEO also
Cha-ching!

This is a great way of getting leads if you run a web design company, local directory website or offline marketing type business.

Dont just download it and leave it sitting on your desktop or hidden folder somewhere. Milk it and make MMMMMONNNEEEEEYYYYY!
ENJOY! & dont forget to hit thanks
