Thread: [Need someone to crash a Maplestory channel - Have IP/Port - \\$20 each crash](#)

awwoki - January 23, 2012, 11:10 am

Alright so here's what I'm needing. I attempted 2 different booter services on here, to see if that would be enough to do the job but apparently it wasn't.

Need someone who will be able to crash a channel on the game Maplestory, each world on the game has a specific IP, each world has a set amount of channels, each channel is hosted on a separate port.

All I'll be needing is one of the ports to be crashed, I don't need it to stay offline for a set amount of time, just enough to cause the channel to restart, since it will automatically restart in the case of a crash/timeout.

If anyone's able to accomplish this, I'll pay very well to just get it to crash a couple times. Maybe 5-10 times, only needs to go offline for like 10 seconds, enough to cause it to restart.

If you think you're able to do this, here's the IP/Port to test:

8.31.98.73:8585

To check the status, here's a website that constantly tracks the status of the channels:

<http://maplestatus.com/>

The color will be yellow/green if it's online, red when it's offline.

This IP/Port is used for the Chaos Server, Channel 01.

Send me a PM if you've tested and were able to crash it causing a restart.
