Thread: [Moving a file in python using shutil](#)

Needlz - January 24, 2012, 3:53 pm

Hi, I am currently learning python 3 and needed to learn how to move a file for a script I am currently making.

I have commented so you know what is going on. I am using the shutil module and getting user input.

This is written for py3

Quote:#Importing the shutil module
import shutil

#Asking user input for the source file
source = input("Please enter your source file > ")

#Asking user input for destination
destination = input("Now please enter your destination file > ")

#Moving the source to destination =
shutil.move(source, destination)

print (" ")
print ("Your file was moved to ", destination)

ahaaa ... sorry ?

but, don't u see it's kinda little thread ... i mean u can put many other things in addition to this ... and you are a LEET so u can Edit ur thread any time ? ... just my opinion ?

Pretty neat script. Kind of less interactive though for the user has to input the directory.

It may have been better if you had stored it as a variable or passed it as a parameter of a function. (I'm gonna try a bit more)
