What DVAR's?

Any private ones?, or just the released codes?

Then you shouldn't be charging up to \$15 when they can easily look on his YouTube and find tutorials, and to find dvars a simple google search is needed. \$5 MAX is what the biggest menu service is worth, charging anymore than that is completely ludicrous.

Very easy to do by yourself, and these are infinite R2R.

Pitbull's right my man.

I personally would only pay 5\$ for something like this.

All your doing is making something faster for somebody too lazy to do it themselves.
