Email Sender in batch

Ive made a simple email sender in batch that sends attachments of your choice. You can see some pictures below this text, hope you like it.

Pictures:

mickro - January 29, 2012, 6:32 am

Nice mix of batch and vbs
great tool for keyloggers ?

KarSticx - January 29, 2012, 6:33 am

Nice Work Man Congratulations
Im Test It Now!!!

BobFM - January 29, 2012, 7:06 am

Pretty badass. Simple, but no one has posted this here. (To my knowledge) Good share, but fix some of your Y/N if statements. Do

```
if /i "example"==y
if /i "example"==n
```

Infinitynull - January 29, 2012, 7:29 am

Is this a legitimate program, and does it function properly?

SIM-1073426 - January 29, 2012, 8:37 am

Why dont you check the code? im not giving out a execution file you know.

Infinitynull - January 29, 2012, 8:50 am

Wooo no flame please were all friends here ha-ha.
:D's for everyone!

Lies??

k3y - January 29, 2012, 5:03 pm

Nice stuff sir, would you ever consider making a tutorial on what is needed to make one of these for us less then superhuman tech wizards?

ComplexUnicorn - November 14, 2012, 1:34 am

Thanks! You got some High Quality coding going on there ;) Cheers <3

Proximity. - November 16, 2012, 9:41 pm

Nice Going. Keep it up!!?

X-Max-Tactical - September 29, 2013, 3:13 pm

Wow my men !!! this is a Great one JOB you did.
Thanks a lot for sharing this.!!

BasedElliott - October 1, 2013, 3:32 pm

This is very good! Definitely gonna have to test this one out.

GL1TCH3D - October 1, 2013, 4:30 pm

Going to try it when I get home =O
Hopefully it works. I'm not familiar with vbs or sending emails through vbs

Paulmad - October 1, 2013, 6:13 pm

Nice work, I'll definitely give this a try.

QuiMoritur - October 20, 2013, 10:53 am

Very nice, but there's a simpler way to do it. You can enter in whatever From address you want as long as you replace the "whateveryourISPis" with your actual ISP. I'm not sure if the rest of your code is just UI, but this is a lot simpler and easier to use.

```
Code set objmessage = createobject("cdo.message")
```

```
objmessage.from = "wowzerz@lolzerz.wtf"  
objmessage.to = "whatever your email address is"  
objmessage.subject = "whatever subject you want"  
objmessage.textbody = "put your information in here"
```

```
objmessage.configuration.fields.item ("http://schemas.microsoft.com/cdo/configuration/sendusing")  
= 2  
objmessage.configuration.fields.item ("http://schemas.microsoft.com/cdo/configuration/smtpserver")  
= "smtp.whateveryourISPis.com"  
objmessage.configuration.fields.item  
("http://schemas.microsoft.com/cdo/configuration/smtpserverport") = 25  
objmessage.configuration.fields.update  
  
objmessage.send
```

your actual ISP. I'm not sure if the rest of your code is just UI, but this is a lot simpler and easier to use.

```
Code set objmessage = createobject("cdo.message")
```

```
objmessage.from = "wowzerz@lolzerz.wtf"
```

```
objmessage.to = "whatever your email address is"
```

```
objmessage.subject = "whatever subject you want"
```

```
objmessage.textbody = "put your information in here"
```

```
objmessage.configuration.fields.item ("http://schemas.microsoft.com/cdo/configuration/sendusing")  
= 2
```

```
objmessage.configuration.fields.item ("http://schemas.microsoft.com/cdo/configuration/smtpserver")  
= "smtp.whateveryourISPis.com"
```

```
objmessage.configuration.fields.item  
("http://schemas.microsoft.com/cdo/configuration/smtpserverport") = 25
```

```
objmessage.configuration.fields.update
```

objmessage.sendThat would only work if your ISP provides your email address.

SIM-1073426 - *October 20, 2013, 7:28 pm*

I'm tired of this being grave dug. Closing this.
