No, I'm sorry. I got this from a private hacking network, but then I was @ holiday and didn't find my way back there. I need to profit something from this.

SIM-974023 - January 30, 2012, 1:23 pm

Looks like C99 shell on steroids, just saying.

I think it is based on C99, but it has much features from GNY and few other shells. The main thing why I use this shell is the exploits it got.

SpriteZ - January 30, 2012, 2:22 pm

Could you possibly PM me with a mediafire mirror or something, please? :3

rofl.

Guys, this is a retooled C99 shell. Don't pay anyone for this crap. Anyone claiming to give away a "unreleased local-root" exploit is feeding you shit. A 0-day in the linux kernel is worth thousands upon thousands of dollars.

Thank buddy!! ... i want to do server rooting teach me

Big Baller Shot Caller - January 30, 2012, 11:03 pm
Advertise your damn surveys in the referel section. + This is basically an upgrade of C99

Mx. - January 30, 2012, 11:55 pm
its a fake shell basicly nothing added.

xcodecracker - January 31, 2012, 1:15 am
thats crap..! just c99 .. atleast put a password.. and don't fucking put survey links if you didn't code it... !

Did I say 0-day linux KERNEL? And the exploit is patched on like 2% of the servers.

Yes, this is based on C99, but pretty much recoded everything and it should do much better job.

It isn't C99. It's just based of the C99. The only thing that reminds me about C99 is the theme you see in the preview image. And I partially coded this, and I have full rights to share it.

Techie??? - January 31, 2012, 5:19 am
This private shell sucks. I will test, PM me a direct link.

Bacardi - January 31, 2012, 5:27 am

Is it possible to get a direct link to this?

KingKratom - January 31, 2012, 5:32 am

Could you send a direct link, Thanks ?

0x414141 - January 31, 2012, 6:19 am

Ok. If the OP is serious, I can dissect this thing and see what exploits it uses, and if it is backdoored or not.

I have a fairly good background in malware analysis and need PHP malware samples for my collection of stuff to reverse...

So if someone could PM me a sample I can check for backdoors and either vouch... Or name and shame!

Yes, it is. The problem is that I didn't even encode the code. If you find backdoor, please inform us about it :)

HaxOr? - February 1, 2012, 2:52 am

You didnt code this LQ skid you have no right to use a survey link also most likley backdoored :D

This is almost certainly a C99 shell renaimed and backdoored.

It isn't. The theme is the only thing left from C99, no backdoors or anything, you can check by yourself.

I'm sorry mate, but the layout looks exactly like a c99 shell.

Guys, this is a retooled C99 shell. Don'y pay anyone for this crap. Anyone claiming to give away a "unreleased local-root" exploit is feeding you shit. A 0-day in the linux kernel is worth thousands upons thousands of dollars.

^^ This. Please don't download this crap. It's not worth it

File does not exist!

The file you have selected does not exist, or may have been removed by its owner.

No loc root anyway I'm sure. If anyone has a copy of this shoot it my way so I can show how stupid this guy is first hand.

MajorFail - *October 30, 2012, 5:10 am*

This was posted on 01-31-12... I would be surprised if the link would still work. :)
