Thread: [\[TUT\] Beginners Guide to Set Up a Cerberus Server \[TUT\]*](#)

Fr0st_Byte - December 27, 2009, 4:15 pm

Not my tut, credit is due to Pillus

The download for Cerberus 1.03.4 Beta is here : [Cerberus.rar](#)

The above download was posted by ME. I can honestly say its safe. This download, posted by "thecad", I cannot say because I have NOT tested. Use at risk, but there are 5 hosts to download it from here. [Cerberus Mirrors](#)

I have seen some people requesting a simple cerberus howto guide, so here it is

What do we need to do before we are starting to set up cerberus?

First, we want to have a dyndns account. Go to <http://www.dyndns.com/> and register yourself (Yes i know people often use no-ip instead, but i like DynDns better)

When you have registered yourself and logged in, we need to go to "add host services"

Spoiler ([Click to View](#))

Due to the 10 images per post limit, I must give a link to this image instead. [Images of DynDns ADD HOST](#)

Here you just need to fill in your hostname of your choice (what the url is gonna be), Choose Host with IP address, fill in your IP address, and press add to cart.

This feature is free, so just press NEXT and press Activate Services on the next page.

So now you have your own free domain!

Next is you need to forward your port (if you are behind a router)

Go to www.portforward.com and check out the guide for your router.

We are going to use port 13243 in this guide, but it is up to you what port you want to use. The reason i choose a portnumber so high is that other programs normaly don't use this.

Okay, now we are done with everything we need to do before setting up cerberus, i would also recommend turning of both firewall and antivirus while doing this so you don't get any interruptions etc.

First of lets grab the newest version of cerberus in the Official Releases section It's packed with winrar, so download winrar at www.rarlabs.com if you have any problems unpacking it

When all is done, let's open cerberus and get started.

[img]<http://img19.imageshack.us/img19/8396/cerbp.jpg>[/img]

Here we start with

Basic Options

[img]http://img43.imageshack.us/img43/9630/basick.jpg[/img]

Here you fill out the hostname you choosed at dyndns.org, your password that you want your server to use and a name (ID). Also remember to change the port like in this picture. That is very important! ^^

Next up is the

Server Installation

[img]http://img512.imageshack.us/img512/6747/serverinst.jpg[/img]

Here you will tell cerberus where to install itself and its name, you can ofcourse choose whatever you want on these settings, but i like to install it in the windows directory.

Next up is the

Boot Method

[img]http://img186.imageshack.us/img186/7056/bootg.jpg[/img]

Here i am telling cerberus to start up in registry, this is an easy way to make cerberus start up after the computer that the server is installed on reboot's. I also choosed Active Setup to bypass some AV's.

Next up is the

Add file

[img]http://img30.imageshack.us/img30/5723/addfile.jpg[/img]

Since this is a beginner set up i am going to leave this blank for now. But if you want to add your own files that also is going to start with cerberus, this is the place to go, but lets leave this blank for now

Next up is the

Anti Debug

[img]http://img17.imageshack.us/img17/5513/debugw.jpg[/img]

Here i am leaving this blank for now, since i am testing on a VMware later on. But normaly you would want to check all of this, so it wont get detected by sandboxes etc

Next up is the

Misc. Options

[img]http://img406.imageshack.us/img406/8043/miscr.jpg[/img]

Here i turned on keylogging and configured it to log everything to "database.dat"

I also choosed some stealth options to keep the files hidden, but most important i changed the process i wanted cerberus to inject into, since i think IE process is crashing to much and that is something we don't want ^_^

Next up is the

Display Message

[img]http://img25.imageshack.us/img25/2172/displayyxk.jpg[/img]

If you want cerberus to display any error messages this is the place to configure it, and i think most of these things describe itself I will leave this alone as i want cerberus to just run in the background.

Next up is the

Black List

[img]http://img233.imageshack.us/img233/9358/blacklist.jpg[/img]

Here you can choose what processes you want cerberus to try to kill when it gets executed, like antivirus processes or special programs. I haven't tested this myself so use it at your own risk .

Next up is

Create Server

[img]http://img23.imageshack.us/img23/3480/createh.jpg[/img]

Here you will choose the name of the file and what type of file it will be.
I also set it up to run in visible mode, so the user KNOW that cerberus runs on the computer.
Normal AntiVirus'es also sees files compressed with UPX as suspicious, so i rather not use it.

When you have choosed all you want to use, press CREATE SERVER.

Then your server will appear in your cerberus folder. If you want now, you can doubleclick it to see if it works.

If you want to add more to this tutorial, or something is wrong, dont hesitate to send me a quick PM with it and i will see what i can do

Cyraxx 2 - December 27, 2009, 7:21 pm

nice, good tutorial.

Fr0st_Byte - December 27, 2009, 7:39 pm

thanks man =] not mine but it is a good tut

Rs6 - December 28, 2009, 2:22 pm

Very very good rat ?

ArmyyStrongg - December 28, 2009, 4:04 pm

and after that you just spread to people or what?

Xinapse - December 28, 2009, 4:05 pm

NICE tutorial ! :D i love cerberus :D

RidingSlow - December 28, 2009, 6:17 pm

Sweet tutorial thanks, but just a quick question. Do you need to enable port forwarding for cerabus, or not. Because it would be great if we don't (I dont really want to), but if you do, I would add that up top.

Thanks again!

Fr0st_Byte - December 28, 2009, 6:27 pm

(Dec 28, 2009 07:17 PM)RidingSlow Wrote: [\[CITE\]](#) Sweet tutorial thanks, but just a quick question. Do you need to enable port forwarding for cerabus, or not. Because it would be great if we don't (I dont really want to), but if you do, I would add that up top.

Thanks again!

Yes, it requires PF. Its somewhere in the tutorial, I'll make a requirements section asap thanks.

(Dec 28, 2009 05:04 PM)ArmyStrongg Wrote: [\[CITE\]](#) and after that you just spread to people or what?

Yes. lol

To the others, thanks ?

AuToGrApHzZz - December 31, 2009, 8:20 pm

What do i make the DNS? like .dyndns.biz or what?

kSp - December 31, 2009, 9:17 pm

My fucking luck.. I went to the port forwarding site and i went under Belkin and they didn't have mine. My model number was F5D7050

Can someone please help me try to port forward this thing? Iv had several other people try to and no one seem to be able to do it. Can someone please help me with like MSN remote control or something?

Weather Man - January 1, 2010, 3:31 am

Do we have to get the victims Ip?

SmokedUp - January 1, 2010, 3:34 am

Great tutorial For a Great Rat.

Fr0st_Byte - January 1, 2010, 4:32 pm

(Dec 31, 2009 09:20 PM)AuToGrApHzZz Wrote: [\[CITE\]](#) What do i make the DNS? like .dyndns.biz or what?

Anything you want, just route it to your IP

(Dec 31, 2009 10:17 PM)J.p Wrote: [\[CITE\]](#) My fucking luck.. I went to the port forwarding site and i went under Belkin and they didn't have mine. My model number was F5D7050

Well, when you run with sandboxie isnt it supposed to NOT work?

Try running it without sandboxie to see if it works, or am i getting ur question wrong?

Fr0st_Byte - January 1, 2010, 7:45 pm

(Jan 1, 2010 08:44 PM)Zas Zero Wrote: [\[CITE\]](#) Well, when you run with sandboxie isnt it supposed to NOT work?

1/2 agree, try without sandboxie and see what happens

Moneybags - January 1, 2010, 7:59 pm

Good tutorial man. I might use this RAT. Instead of ProRAT which I can not get working for the life of me.

Fr0st_Byte - January 1, 2010, 8:01 pm

(Jan 1, 2010 08:59 PM)Moneybags Wrote: [\[CITE\]](#) Good tutorial man. I might use this RAT. Instead of ProRAT which I can not get working for the life of me.
I love prorat, as long as you can get your server FUD.
Good luck with Cerberus.

?ichie - January 2, 2010, 9:13 pm

thanks! Im not bumping rite??

WTF|FTW

imAcarrot - January 3, 2010, 12:29 am

Thank you kindly ?

AceKidd01 - January 3, 2010, 1:05 am

Do you mind show a scan report of Novirus thanks please.

Fr0st_Byte - January 3, 2010, 1:31 am

For Cerberus?

I can if you like...but I mean, it makes RATs so it'll prolly show up as something.

RawrMike - January 3, 2010, 2:07 am

Anyone know how i can get in contact with the Cerberus maker? i have a few suggestions for later versions..

ch4d - January 3, 2010, 2:09 am

thanks alot but hey man how come we cant click update i mean its shaded in all but yea...

Fr0st_Byte - January 3, 2010, 2:12 am

(Jan 3, 2010 03:07 AM)RawrMike Wrote: [\[CITE\]](#) Anyone know how i can get in contact with the Cerberus maker? i have a few suggestions for later versions..

I stole the download from se.curity.org...so idk look around there

(Jan 3, 2010 03:09 AM)ChAd FtW Wrote: [\[CITE\]](#) thanks alot but hey man how come we cant click update i mean its shaded in all but yea...

No clue, its not my app.

ProfoundZeus™ - January 3, 2010, 12:49 pm

Thank you for this simple tutorial.....

Now i just need to make it FUD and spread it a bit.... :)

XIX - January 3, 2010, 7:30 pm

help! I download and after extracting it disappears

Plutonium - January 4, 2010, 2:24 am

"Siiiiigh" Get it for the latest version instead ;)

mKn1ght - January 4, 2010, 4:45 am

nice, great tutorial

Clerisy - January 4, 2010, 8:36 am

After i enter my Router Model etc, it asks me to pick what program i am forwarding..?
and no cerb is not there.

Clerisy - January 4, 2010, 10:07 am

You might also want to add more detail about port forwarding for people behind Routers.

Fr0st_Byte - January 4, 2010, 1:15 pm

(Jan 4, 2010 09:36 AM)clerisy Wrote: [\[CITE\]](#) After i enter my Router Model etc, it asks me to pick what program i am forwarding..?

and no cerb is not there.

Thats because you can use any port man.

just pick a port. doesnt matter what APP name it has.

I had port 667 open when I used to use Cerberus with the name "fuckme"

noobidude - January 4, 2010, 4:16 pm

Can someone send a pic from working set upped Cerberus?

Fr0st_Byte - January 4, 2010, 4:46 pm

(Jan 4, 2010 05:16 PM)noobidude Wrote: [\[CITE\]](#) Can someone send a pic from working set upped Cerberus?

Can someone learn grammar and usage?

Clerisy - January 4, 2010, 5:18 pm

(Jan 4, 2010 02:15 PM)T3tr4hydr0c4nn4bin0l Wrote: [\[CITE\]](#) Thats because you can use any port man.

just pick a port. doesnt matter what APP name it has.

I had port 667 open when I used to use Cerberus with the name "fuckme"

Well which program am i forwarding?

Fr0st_Byte - January 4, 2010, 5:26 pm

It doesnt matter.

ANY port from any "program" will work, thats just a collection of what ports certain programs use.

You can select anything as long as its not already in use.

Just edit the port to match the server when you make it in Cerberus

Clerisy - January 4, 2010, 5:35 pm

Thanks Ill Test it.

//tooshort//

Gwas_666 - January 4, 2010, 5:44 pm

Nice tutorial

Clerisy - January 4, 2010, 5:51 pm

Okay I Made the start and end port 5110 for ProRat, but when i check it with PFPortChecker it says the Port isnt open.. what am i doing wrong?

Fr0st_Byte - January 4, 2010, 5:55 pm

what ISP do you have?

Some ISP's block port forwarding (you need a static IP)

Clerisy - January 4, 2010, 6:32 pm

I have Optus yes. Yes I Have static Ip.

Fr0st_Byte - January 4, 2010, 6:45 pm

Hmm...idk man, try googling your modem and your router and see if anyone else has trouble PF.

Clerisy - January 4, 2010, 7:10 pm

I think this is what im having trouble with, these are the options

Name:

Start Port:

end Port:

Local IP: 192.168.0.[pick]

Fr0st_Byte - January 4, 2010, 7:17 pm

ok, is your local IP correct?

start and end port should equal the same

name doesnt matter

Warpclaw - January 4, 2010, 7:36 pm

Finally got it working :)

Very nice cam feature :)

Fr0st_Byte - January 4, 2010, 7:40 pm

Congrats, happy ratting

Clerisy - January 4, 2010, 9:32 pm

Ok i port forward it :) it says ports open now i just gotta crypt it and distribute, hope it works

Fr0st_Byte - January 4, 2010, 9:38 pm

(Jan 4, 2010 10:32 PM)clerisy Wrote: [\[CITE\]](#) Ok i port forward it :) it says ports open now i just gotta crypt it and distribute, hope it works

congrats ? finally lol

jrb113 - January 4, 2010, 10:01 pm

goood tut

very n00b friendly

Truth Hurts - January 5, 2010, 2:02 am

after crypting my Cerberus server and testing it..i get this error;

[img]http://i50.[censored].com/ipuxb4.jpg[/img]

and yes, ive updated my network frame

miloooot - January 5, 2010, 3:14 am

im very new at hacking

i read the whole tuto and i want to ask for what is this lol.

Chaotic Akuma - January 5, 2010, 3:28 am

Thank you, very well detailed!

miloooot - January 5, 2010, 3:30 am

anyone can tell me for what to use this "cerbrus" plzz

very new at hacking

BaNNED - January 5, 2010, 3:31 am

Thanks for the tutorial . Still waiting next beta :D

jrb113 - January 5, 2010, 3:37 am

great tutorial....got this setup in like 5 min

Kenny20 - January 5, 2010, 8:08 am

Very good tutorial, thanks:)

Fr0st_Byte - January 5, 2010, 8:17 am

(Jan 5, 2010 04:14 AM)miloooot Wrote: [\[CITE\]](#) im very new at hacking
i read the whole tuto and i want to ask for what is this lol.

This is a Remote Administration Tool. It allows someone who is running the client (Cerberus) to connect to a computer running the server (File created by Cerberus) and have control over the computer.

For those of you that said thanks, your welcome and thank you ?

Clerisy - January 5, 2010, 8:43 am

You teach about how to set it up, but you should show how to function it too :D

Fr0st_Byte - January 5, 2010, 12:25 pm

(Jan 5, 2010 09:43 AM)clerisy Wrote: [\[CITE\]](#) You teach about how to set it up, but you should show how to function it too :D

Good suggestion, noted.

When I have enough time I shall try building a second tut with a link to each other in here. Ty

Warhawk - January 5, 2010, 12:25 pm

worked perfectly for me, thanks a bunch :)

Fr0st_Byte - January 5, 2010, 12:27 pm

(Jan 5, 2010 01:25 PM)ThatOneGuyWithAids Wrote: [\[CITE\]](#) worked perfectly for me, thanks a bunch :)

Np, thanks, happy ratting ?

hedera - January 5, 2010, 3:36 pm

Why i have to use another ip services and/or port forwarding? What happens if i dont forward port? And how can i get the victims ip and login hir/her server? Is there a client section of Cerberus?

Thank you a lot

moccor - January 5, 2010, 3:38 pm

Is there any way to get this to work with x64 OS? I tried to execute the created server with a different machine (Windows 7 x64 Ultimate) and it gave me a error when executing it that I should try a x64 or x86 version. Also, when the server is opened with a hex editor, it says it must be run under win32.

ProfoundZeus™ - January 5, 2010, 3:42 pm

(Jan 5, 2010 04:38 PM)moccor Wrote: [\[CITE\]](#) Is there any way to get this to work with x64 OS? Thank you a lot

The IP service ROUTES to your ip. Not sure WHY its done, but its no hassle really.

AND portforwarding, no OR. IDK either, I just know that the port has to be open for you to connect to your bot vice versa.

No port forward, no connections.

The large main window is the client section. Thats where to see your zombies

(Jan 5, 2010 04:38 PM)moccor Wrote: [\[CITE\]](#) Is there any way to get this to work with x64 OS? The large main window is the client section. Thats where to see your zombiesThank you for quick response.

But i am thinking using client section on my dedicated server. Which has 7/24 internet connection at a datacenter. Has static ip. Not on my PC, maybe i will try it then tell if it works or not. And another question, does it logs keystrokes? Can i see them later?

Fr0st_Byte - January 5, 2010, 3:59 pm

It does log keystrokes, I'm sorry to say that I have never used Cerberus, only set it up for people. Weird huh?

ProfoundZeus™ - January 5, 2010, 4:02 pm

Yes, Cerberus logs keystrokes. ?

hedera - January 5, 2010, 4:11 pm

Okay i will do all of this, and after being sure it is working, i will try to FUD it. Sorry if i am bothering you but is there any official site of cerberus?

Fr0st_Byte - January 5, 2010, 4:17 pm

<http://se.curity.org/> is the only source I've seen of this program.

moccor - January 5, 2010, 5:07 pm

I would help, but I have no clue about it to be honest.

moccor - January 5, 2010, 6:14 pm

Thanks anyway, hopefully someone has a answer.

Fr0st_Byte - January 5, 2010, 6:56 pm

Yea, sorry man. Try asking around here, or Google it. I'm sure Google probably knows.

ThatPoisonKid - January 6, 2010, 12:55 am

1st post ^_^

Okay so i've set everything up correctly and forwarded my ports, etc etc
The one thing that is confusing me is when I load up cerberus It says in the corner the default port number 5110 or w/e
Do I need to somehow change that to the port I forwarded; If so how?
thanks in advance. xP

Fr0st_Byte - January 6, 2010, 2:12 am

yea on the right hand side (bottom) click options.

?

SIM-135152 - January 6, 2010, 2:30 am

I found a quick solution to this but it's only really temporary as it makes your computer vunerable. DMZ :}

I did it yesterday and it seems to work perfect for me; I got like 2 servers over night which I don't think is too bad considering it's not fud :P

JOhn - January 6, 2010, 4:50 pm

Very well explained tut lad

ThatPoisonKid - January 6, 2010, 6:07 pm

ahah I got 10 servers now :) I was wondering if you would explain to me how I could download my own keylogger and run it on his computer because the built one sux xP. thanx

~~Poison

(Jan 6, 2010 05:48 PM)ThatPoisonKid Wrote: [\[CITE\]](#) I found a quick solution to this but it's only really temporary as it makes your computer vunerable. DMZ :}

I did it yesterday and it seems to work perfect for me; I got like 2 servers over night which I don't think is too bad considering it's not fud :P

Share ?

(Jan 6, 2010 07:07 PM)ThatPoisonKid Wrote: [\[CITE\]](#) ahah I got 10 servers now :) I was wondering if you would explain to me how I could download my own keylogger and run it on his computer because the built one sux xP. thanx

~~Poison

There are tons of keyloggers my favorite is Predator, but you gotta FUD crypt it, [I can do for 3 bots :)]

ThatPoisonKid - January 7, 2010, 3:59 am

you'll have to look about on your router settings to find this;

anyhow here's a description I pasted off wiki ^ _____ ^

DMZ host

Some home routers refer to a DMZ host. A home router DMZ host is a host on the internal network that has all ports exposed, except those ports forwarded otherwise. By definition this is not a true DMZ (Demilitarized Zone), since it alone does not separate the host from the internal network. That is, the DMZ host is able to connect to hosts on the internal network, whereas hosts within a real DMZ are prevented from connecting with the internal network by a firewall that separates them, unless the firewall permits the connection. A firewall may allow this if a host on the internal network first requests a connection to the host within the DMZ.

This can also be called assign a public ip to a local network device

have fun ratting ^_^

Fr0st_Byte - January 7, 2010, 4:20 am

Hmm...I tested with MeTuS 2.8 Delphi and nothing...but:

"Success: I can see your service on xxx.xx.xxx.x on port (3174)

Your ISP is not blocking port 3174" (<http://www.canyouseeme.org/>)

and yes, I've set up no-ip correctly...this doesnt make sense to me...my IP seems to change the last digits ever day, so I download the updater for no-ip and the bot is still not connecting...

any suggestions?

ThatPoisonKid - January 7, 2010, 4:35 am

Yea, I was giving credit where credit was due. I could have just pretended it was mine, seeing as how 90% of people on this forum probably never see the host site for cerberus.

But I thought it was a good post for our forums as well.

Ice-E - January 7, 2010, 4:27 pm

It's a nice tutorial, for the keylogging section, it goes into logs.db, so when the person runs my server, where can I find my log file after?

Ice-E - January 7, 2010, 5:38 pm

Also, I binded this with a png, by doing run the png with my server and he ran it, but i have no servers online?

Fr0st_Byte - January 7, 2010, 5:58 pm

(Jan 7, 2010 05:27 PM)Ice-E Wrote: [\[CITE\]](#) It's a nice tutorial, for the keylogging section, it goes into logs.db, so when the person runs my server, where can I find my log file after?

When you right click on a zombie, his logs will be an option you can click and view.

(Jan 7, 2010 06:38 PM)Ice-E Wrote: [\[CITE\]](#) Also, I binded this with a png, by doing run the png with my server and he ran it, but i have no servers online?

What did you bind it in? Cerberus? Some noobs can get confused with this, you may have corrupted it or even made your whole bot wrong.

ThatPoisonKid - January 7, 2010, 8:20 pm

(Jan 7, 2010 06:38 PM)Ice-E Wrote: [\[CITE\]](#) Also, I binded this with a png, by doing run the png with my server and he ran it, but i have no servers online?

hey john it's harry2k9 from rsbot forums ^_^ and I'm getting the same problem now, my rats been downloaded 71times and no servers anymore D:

bare in mind though it's not fud >_<

Free crypters wont stay fud man.

You'll need to buy one with a FUD custom stub, and buy new stubs when it gets detected.

ThatPoisonKid - January 7, 2010, 11:30 pm

Fr0st_Byte - January 9, 2010, 1:46 am

(Jan 9, 2010 01:55 AM)Karamitolas Wrote: [\[CITE\]](#) On yourself or at a victims computer?
Agreed

moccor - January 9, 2010, 9:12 am

Both, lol. Yeah sorry for not being specific. Well the computer I tested it on is mine, but it's not the computer that is running the cerberus gui.

pretzel - January 9, 2010, 12:34 pm

kk i cant get it to wrok, when i try to run the server to test it it says a cerberus server is currently running on your computer, at the end of your remote assistance please press ok to remove thhe server from your computer

Fr0st_Byte - January 9, 2010, 5:31 pm

(Jan 9, 2010 10:12 AM)moccor Wrote: [\[CITE\]](#) Both, lol. Yeah sorry for not being specific. Well the computer I tested it on is mine, but it's not the computer that is running the cerberus gui.
If it shows up in your Cerberus client, you should be able to Right Click, then chose Server Options, and Uninstall.

(Jan 9, 2010 01:34 PM)pretzel Wrote: [\[CITE\]](#) kk i cant get it to wrok, when i try to run the server to test it it says a cerberus server is currently running on your computer, at the end of your remote assistance please press ok to remove thhe server from your computer

You need to UNCHECK "Run in Visible Mode" when you build the server.

MooseHide - January 9, 2010, 7:58 pm

I have a Dynamic Ip Access So Port forwarding wont work ,

Any other way ??

Justin P Was Here - January 12, 2010, 10:23 am

hello, when im done with everything and try to open my server nothing happens! and its not connectable, how do I solve this problem ?

I am not usiing static IP, got any ideas on how to setup the server without static UP ????

_3rr0r - January 12, 2010, 10:28 am

Thank you for the great tuto! The only thing I suggest is telling them to change the port cerberus is listening to in the options.. And possibly a link to a free port forward program (lots of them out there now!!)

dustyistwiztid6 - February 5, 2010, 4:53 pm

Hey..

Cerberus is amazing.. much better than sub seven.. I've gotten subseven to work in the past and now trying to use cerberus because i have a very basica fud crypter with custom stubs.. the real problem i'm having is setting up the server.. i've done it every way possible in tutorials.. my main problem is with the ports.. i can get my server to run.. but it won't show up in my client area.. i'm goanna need some personalized help.. kottonmouth i've added you on aim.. anyone else willing to help and walk me through it? using team viewer or something.. it would be greatly appreciated!!

i'll be on aim

AIM= dustyistwiztid6

oh.. and using windows xp and i am NOT behind a router, it seems i've been hearing more about using a router and the use of portforwarding, and i think i might have gotten confused with that.. so if anyone can set me straight with this it would be great

fike - February 9, 2010, 2:27 pm

Why the f*** run in visible mode?

lol they only got some crappy wwwwwwwwwaaaaaassssssssssssddddd spam from in game . .
. XD

RobotzInDisguise - February 14, 2010, 3:34 pm

"Here you just need to fill in your hostname of your choice (what the url is gonna be), Choose Host with IP address, fill in your IP address, and press add to cart.

This feature is free, so just press NEXT and press Activate Services on the next page"

Do i have to put in my real ip, or can i put a proxy ip?

"Next is you need to forward your port (if you are behind a router)

Go to <http://www.portforward.com> and check out the guide for your router.

We are going to use port 13243 in this guide, but it is up to you what port you want to use. The reason i choose a portnumber so high is that other programs normaly don't use this."

I'm confused again at here.... Where did you enter the port?

Fr0st_Byte - February 14, 2010, 4:57 pm

Real IP, and keep looking you'll find it ;)

Diakonov - February 14, 2010, 9:11 pm

Great tut, mate. Cerberus was easy to setup and understand with your guide. I did, however, have a problem when I tried to test my server on my own computer. I created the server in the same way specified but when I attempt to open it, I get the old blue screen of death. Do you think this would cause problems on other machines or is it likely that it's a problem unique to my computer?

Edit: My bad, forgot it wasn't your guide. Good stuff anyway :D

Fr0st_Byte - February 15, 2010, 11:40 am

I'd say its your computer...or something you've done to your server. What OS are you running?

jeffmacky - February 17, 2010, 5:10 pm

Great tut man. Cerberus is awesome!

Sorry for the mistake. ^^

IDCUMF - May 22, 2010, 7:31 am

Guys everything is okay with but when my friend open the server file, it works but only for about 5 min, so what? any help?

MORPH-182 - May 22, 2010, 8:26 am

Out of the 287 Cyberbus tutorials, this one is my favorite. Thanks.

xxBiohazardXx - May 22, 2010, 11:28 pm

Okay, I am thoroughly stumped. So I set up my server. At this point I am 99% sure I set it up properly. So I crypt it and NVT says it's clean. The problem comes with binding. I may be mistaken on how this is supposed to work, but I figure binding is appending the RAT to another file, an installer package for example, so that the person I send this to over MSN can install the program and the Cerberus server will install in the background. Assuming this to be true, it fails every time. I try to test the installation on my own computer and the only thing that happens is a DOS box appearing for half a second. The person I tried to infect also reported this (they didn't know I was trying to infect them). I know the server works because I found it on my own system (I had the settings wrong on the first one so I'm gonna have to infect this person again) but I don't want to have to keep using the "corrupted transfer" excuse. Any help?

Edit: I also attempted to figure out how to use the 'Add File' option when creating the server. I put the installer in there but that didn't work either.

(May 22, 2010 11:28 PM)xXBiohazardXx Wrote: [\[CITE\]](#) Okay, I am thoroughly stumped. So I set up my server. At this point I am 99% sure I set it up properly. So I crypt it and NVT says it's clean. The problem comes with binding. I may be mistaken on how this is supposed to work, but I figure binding is appending the RAT to another file, an installer package for example, so that the person I send this to over MSN can install the program and the Cerberus server will install in the background. Assuming this to be true, it fails every time. I try to test the installation on my own computer and the only thing that happens is a DOS box appearing for half a second. The person I tried to infect also reported this (they didn't know I was trying to infect them). I know the server works because I found it on my own system (I had the settings wrong on the first one so I'm gonna have to infect this person again) but I don't want to have to keep using the "corrupted transfer" excuse. Any help?

Most likely, the Crypter corrupts the server; have you tried to crypt the server & execute it on yourself before binding it? (Perhaps the Crypter lacks EOF Support?)

Also, are you sure you remembered to portforward the necessary ports for Cerberus?

xXBiohazardXx - May 23, 2010, 5:11 am

I do have my ports forwarded, but I didn't check the box for EOF since I didn't know what it did. What does it do?

Sorry for the mistake. ^^

Yea about that...sorry man had a rough day the other day I kinda used you as a very small vent of emotion. Forgive me <3

xXBiohazardXx - May 23, 2010, 4:50 pm

I really hate being paranoid but, my firewall is asking if it's okay to let Cerberus connect to some IP in Germany. Is this normal (and okay)?

I314CK C0D3R - May 23, 2010, 8:20 pm

can't download this file....please re-upload another

It enables your Cerberus server to work! ^^ Always check EOF when you're crypting your RAT/Bots.

The TakeOver - May 25, 2010, 7:35 am

Ok, now I know I am not loosing it.. I thought maybe I was messing something up with CyberGate, so I DLed this, followed your guide and it works... Not sure why I couldn't get cybergate to work, but

I much appreciate your guide!

Anyone got an answer for me?

zeeland4life - May 26, 2010, 9:34 am

it keep wont working :S any suggestions? i tried many TuTs of the Forum ...

H4Z3Y - August 19, 2010, 10:36 am

WOW. Where do I begin... THANK YOU!!! After many hours of trying to get other RAT's to work, none of them ever worked. This is the first RAT to actually work for me!!! I tried spy-net 2.6 and when I tested it on myself sanboxed the server wouldn't even show on my list. But THIS... THIS SHOWED UP WHEN I TESTED IT! Thank you so much for making the tutorial and to whoever made this RAT. ?

H4Z3Y - August 20, 2010, 10:17 am

One question, how do I remove the server once I am finished doing my business?? ?
