Thread: [\[TUT\] Verify phone calls \[Works with eBay!\]\[SMS/CALL\]](#)

Walcott - January 31, 2012, 12:32 am

100% written by Walcott. You don't have any rights to put this tutorial somewhere else HF without my permission.

Things you will learn in this tutorial:

1. How to verify automated calls that provide Code
2. For those who don't live in USA, will have a USA phone number to verify.
3. Works with calls and sms.
4. BONUS: Call free to any USA phone (unlimited talk time)!

First of all, I assume that you don't live in USA and have some site that needs a usa phone number to verify your identity (example: ebay.com)

Here you will have your own USA phone number to provide at the site and accept voice call and sms's.

Let's get started!

Step 1:

1. Goto https://mdns.sipthor.net/register_sip_account.phtml
2. Create an account.
3. Check your email for the sip login details and password.
4. Save it for now, we will need it later.

Step 2:

1. Download this SIP client: <http://www.nch.com.au/components/talksetup.exe>
2. Setup the application, don't choose any add-on during the installation, you wont need those.
3. After finishing the setup, click "I already have a sip account"
4. Enter your details to setup your client. And now it will test your internet. You will need some ports unblocked (I don't remember which ports). If the port is open then the application will run correctly and tell you everything is OK.

Verification works in two ways, i will explain the two ways here. 1. Automated voice call, 2. Automated SMS with code

Step 3: (This step is for voice call)

1. Goto <https://www.tropo.com/>
2. Register for an account. It's free.
3. Now goto "applications".
4. Click "Create New Application" and chose "Tropo Scripting"
5. Give any name to your application. I gave "eBay".
6. Now click on "Hosted file" and then click "Create a new hosted file for this application"
7. On the file name, write any name with php extension. I wrote "ebay.php"
8. Now paste this code on the second box:
Code <?php
answer();
transfer("sip:your_sip_info@sip2sip.info");
?>
9. Replace "your_sip_info" with the username you register earlier.
10. Click "Create file".

11. You will see your application now. Click on "Add a new phone number"
12. You will see to dropdown boxes, click the box right to "US and Canada Local Numbers". Chose your favorite USA city. And click on the "plus button"
13. You will see a phone number added to your application. Write this phone number down. This is your personal USA number.
14. You're done! Whenever someone call you on the USA phone number, it will redirected to your SIP client installed on your desktop! You will need microphone and headphone to talk.

Step 4: (This step is for SMS code)

1. Create a new application on tropo.
2. Put this code on your application:

Code <?php

```
$myID = $currentCall->callerID;  
$myVariable = $currentCall->initialText ;
```

```
message("New SMS FROM: ".$myID." --- ".$myVariable."---", array(  
"to" => "+155",  
"network" => "SMS"));  
hangup( );
```

?>3. Replace your phone number with international code. Like +155

4. Add a phone number.
5. You're done! Whenever any one sends a sms on your USA number, it will be forwarded to your real phone!

BONUS: Make unlimited voice call to USA! Register for a new gmail account with usa proxy. on the left hand side of the inbox, you will see "call phone", when you click it, you will see a dialing pad on the right side. it will ask you to install "google voice and video plugin" install it, and restart your browser. Goto gmail again, click "call phone", enter any USA phone number, (you can test your tropo numbers also). Unlimited free call!

Thanks for reading my tutorial. I would glad to know any thoughts about this.

I helped you some times ago Walcott and now you found yourself how to did it :)
I didn't use this method but it looks nice, I will try it when I have time ;)

Walcott - January 31, 2012, 4:11 am

I really appreciate your help. hope other guys will find it useful.

annern55 - January 31, 2012, 6:45 am

wow really nice totutrial, but why so few comments you did alot of work to this :(

? NEO ? - January 31, 2012, 8:09 am

Great tutorial.

I will try it.

Thanks for the share.

nickthecool - January 31, 2012, 8:18 am

Awesome tutorial man !!!

Keep the good workup.

Walcott - January 31, 2012, 8:47 am

Thanks guys for your positive feedback. i really appreciate it.

ifido2020 - January 31, 2012, 9:08 am

Looks gr8... Gonna test it now. Thanks for the share :)

nightangel70 - January 31, 2012, 4:14 pm

So if you had to pay for the call (To recieve the code) for something like a survey website (Shitcash or other) would it be free, or would you still have to pay? Thanks though, I'll definitely try this !!!

bo!nk - January 31, 2012, 4:32 pm

You've made an error on this code. trasnfer should be transfer. Nevertheless, still having issues getting this to work.

```
Code <?php
answer();
transfer("sip:your_sip_info@sip2sip.info");
?>
```

Walcott - January 31, 2012, 5:55 pm

```
Code <?php
answer();
transfer("sip:your_sip_info@sip2sip.info");
?>thank you so much for correcting me.
```

bo!nk - January 31, 2012, 8:15 pm

No problem.

Do you have any idea why when i call the number it tells me that "the extension im trying to reach is not available" then it will beep and i can leave a voicemail which does get sent to my email.

Trying to verify facebook accounts with this and obviously they wont leave messages.

And for the texting method, i just put my phone number in the "+155" part and it should forward the text to my phone? 'Cause im not getting anything either. :/

pureinsan3 - January 31, 2012, 8:49 pm

this is pretty beast ! ima try it :D

DarkClouds - February 1, 2012, 11:17 am

it's been over two days I try to do that but it does not work ?

SIM-947411 - February 1, 2012, 11:48 am

yomighty - February 17, 2012, 5:10 am

thanks but i still have trouble using this bro

iy0kid - February 19, 2012, 1:27 pm

i will try this ASAP ..just the kind of tool i needed... in case it works ;) . thanks

NoOne7 - June 26, 2012, 8:38 am

unable to verify the number
didnt worked, tryed voice/sms

nat36 - June 26, 2012, 10:04 am

Wow, thanks for the great share. I've always needed something like this :D

BadGame - June 26, 2012, 10:14 am

Awesome tutorial man !!! Walcott always Rox ;)
Keep the good workup.

ahweb - January 10, 2014, 6:37 pm

Great, in-depth tutorial. Hopefully this still works. I am in dire need of a FB pva solution. Thanks.

Cyber00001 - January 11, 2014, 4:03 pm

Looks gr8... Gonna test it now. Thanks for the share :)

Tzeemu - January 11, 2014, 5:19 pm

Finally awesome tutorial, i like !!

henryroma2053 - March 16, 2015, 9:51 pm

Thanks bro. I appreciate. Please keep it up.....

Draako - March 17, 2015, 5:40 am

Not work now a days, is there something similar to that?
