Thread: [\[PHP\] Private Shell \[IN PROGRESS\]](#)

kobez - February 1, 2012, 2:25 am

Hey guys,

I've decided to start building my own shell because of the amount of backdoored C99's and how easily they get stolen.

I'm going to go at this shell creation from a different angle, there are going to be some good features added!

I'll keep updating this thread with progress reports and such, but heres just a screenshot of what the shell looks like ;)

SCREENSHOTS

UPDATED Main Server Information (04-Feb-2012)

Back Connect [Shell Spawner] UPDATED: (04-Feb-2012)

Spoiler [\(Click to View\)](#)

Log Cleaner [08-Feb-2012]

Spoiler [\(Click to View\)](#)

Tools Section - (UDP FLOODER SPAWNER)

Spoiler [\(Click to View\)](#)

Reverse IP Lookup
Spoiler ([Click to View](#))

Current Features
Hostname

Host IP

Server Software (uname -a)

Current Directory + Base Directory

PHP Version

SQL Version

User ID (userID,groupID,processID,name)

Safemode Check

Magic Quotes Check

Open Base Directory Check

Read 'etc/passwd' File Check

Mass Mailer (Email Bomber)

File Uploader

Directory Browser [PROGRESS : 90% -->View Current Directory|Download Files|View Source of Files --> Working On: symlink+different directory viewing]

Backconnect (c, perl) [PROGRESS: 98% --> Laid down the base code for the back connect to open up a user-specified TCP Port]

Log Cleaner[b/] [PROGRESS: 99% --> Just working out a few bugs and need to compile a bigger list of log files, please submit paths to me! ;D)

Reverse IP Lookup (Also checks if site is online)

UDP FLOODER Creator (No need to have to upload it, just create one ;!)

[b]Soon To Be Added
Auto Backdoor

Password Protection (Possible?)

Safemode Bypass

Magic Quotes Bypass

Auto-Symlink (Possible?)

PHPProxy

Local Root Exploit Search

(More As I Progress?)

SHELL REVIEW AS OF 04-Feb-2012:

Krewella - February 1, 2012, 2:35 am

as always....

i will describe ur stuff in single word

Spoiler ([Click to View](#))

"AwSoMe"

keep it up man..

thethatguy - February 1, 2012, 2:52 am

Why would you want to create such a massive shell for private use ? When any command can be done with a small uploaded php shell of 6 lines of code in order to establish a connect back shell ?

kobez - February 1, 2012, 2:58 am

(Feb 1, 2012 03:52 AM)thethatguy Wrote: [\[CITE\]](#) Why would you want to create such a massive shell for private use ? When any command can be done with a small uploaded php shell of 6 lines of code in order to establish a connect back shell ?

Thats a good question mate.

One of the reasons i want to try and make this shell is see where I sit with PHP, I'm interested in how shells work and how I would go about coding one :)

Which so far is going rather well.

I understand where you are coming from, just tired of the usual C99/WSO/GNY/etc stuff.

I'll release it when its done :P

Bacardi - February 1, 2012, 3:03 am

I like the look of it. Clean.

I'm curious on how to finished project will turn out.

thethatguy - February 1, 2012, 3:05 am

(Feb 1, 2012 03:58 AM)kobez Wrote: [\[CITE\]](#) Thats a good question mate.

Well if you are gaining coding skills good for you. Get your linux commands in a row and soon you will see how simple it actually is.

kobez - February 1, 2012, 3:15 am

(Feb 1, 2012 04:03 AM)Bacardi. Wrote: [\[CITE\]](#) I like the look of it. Clean.

Thanks ?

Going for a sleek GUI, compared to this other stuff floating around.

(Feb 1, 2012 04:05 AM)thethatguy Wrote: [\[CITE\]](#) Well if you are gaining coding skills good for you. Get your linux commands in a row and soon you will see how simple it actually is.

Thanks ?

I'll be looking into those commands soon enough, just pondering around with my PHP scripts ?

Best Teemo NA - February 1, 2012, 3:26 am

Damn GUI is already looking sexy as fuck

kobez - February 1, 2012, 4:12 am

UPDATE: Directory Listing is now complete, and It also allows you to download the files ?

(Still have to work on the functions to allow you to go up directories and in other directories to view their files ;))

Screenshot

Spoiler ([Click to View](#))

[img]http://img694.imageshack.us/img694/7329/shellk.png[/img]

betona - February 1, 2012, 4:24 am

Well look @ ani, add password not that hard just saying.

And you should add a basic nofollow to the search engine to "hide" it.

And please don't make it black & green, look @ Zeus C&C white and blue that's sexy :)

i wish you GL :D

kobez - February 1, 2012, 4:28 am

(Feb 1, 2012 05:24 AM)PoseidonSwe Wrote: [\[CITE\]](#) Well look @ ani, add password not that hard just saying.

i wish you GL :D

Was thinking about adding some code to stop google from crawling it, and also preventing dorks being formed.

It will have some blue in it ? the IP atm is just green to remind me its there.

maki123 - February 1, 2012, 4:51 am

Make it hidden like 404 but a bit more disguised. Maybe only show the page if they have a certain useragent like SeaMonkey or a MD5 hash that you set inside the script.

For funzies you should add a DOS function, Mailbomb, smsbomb(if you can) and a web proxy :D

kobez - February 1, 2012, 6:59 am

UPDATED THE DIRECTORY LISTING ;)

---> You can now download+view the source of files in the current directory!!

-->Working On: Being able to view other files in different directories ;)

[img]<http://img220.imageshack.us/img220/9439/shellz.png>[/img]

Bacardi - February 1, 2012, 12:40 pm

Looking good. Cant wait to use it! :D

-DownFall - February 1, 2012, 1:48 pm

Nice job kobez, it looks really clean and organized unlike alot of the shells people use nowadays. I'll definitely be keeping my eye on this, and using it when you're done.

kobez - February 1, 2012, 6:04 pm

UPDATE: Added Download File/View Source/Edit Source/Delete File Functions to Directory Viewer ?

And ALL functions are working!

Screenshot

[img]<http://img401.imageshack.us/img401/3428/shellp.png>[/img]

Ichi - February 1, 2012, 6:18 pm

Looks sexy as hell Kobez. I'm excited for this!

Bookmarked :)

i be trolling bitch - February 1, 2012, 6:21 pm

this is legit trust me this dudes awesome

kobez - February 1, 2012, 6:34 pm

Thanks guys, going to be adding some wicked awesome features to the shell today :D
Still stumped on the directory issue though :/

Zhen. - February 2, 2012, 2:53 am

Nice work right there broski

You know your shit bro

Bookmarked your blog to keep me posted about your activity

Keep it up <3

kobez - February 2, 2012, 3:15 am

Bookmarked your blog to keep me posted about your activity
Keep it up <3
Thanks bro! :) means alot.
The shell is coming along nicely, what features would you guys like to see in it?

Zhen. - February 2, 2012, 4:34 am

(Feb 2, 2012 04:15 AM)kobez Wrote: [\[CITE\]](#) Thanks bro! :) means alot.
The shell is coming along nicely, what features would you guys like to see in it?Not a problem at all bro
An MD5 cracker would be cool
Linking sites such as md5decrypter to your md5 cracker would be a useful optional feature

HaxOr? - February 2, 2012, 4:37 am

Backconnect,symlink scripts,local root exploit finder.
Few that comes to my mind :)

kobez - February 2, 2012, 4:38 am

(Feb 2, 2012 05:34 AM)zerofreak Wrote: [\[CITE\]](#) Not a problem at all bro
An MD5 cracker would be cool
Linking sites such as md5decrypter to your md5 cracker would be a useful optional feature
I was going to do something like that for local root exploits ;)
but the MD5 cracker is a great idea! :D

about 50% done with the file uploader, just working out a few kinks.
You think i should let a end-user define where you wants to upload a file to.
example

Code Upload to path(Textbox): [User inputs path here]
File to upload(Uploader): [User selects file to upload]Or just upload to current directory? :)

(Feb 2, 2012 05:37 AM)?? ? x O r ? Wrote: [\[CITE\]](#) Backconnect,symlink scripts,local root exploit finder.

Few that comes to my mind :)
Almost got my back-connect for C complete :P
Question: You want to be able to specify which port you want to bind to right? or have a predetermined selection? :P

working on the symlinking scripts aswell.
And also going to add a console for all the 'cmd' die-hard fans ?

Oxy - February 2, 2012, 4:42 am

Very nice.
I hope it allw orks out!.
Seems like a nice looks for a shell!

If you make an edit option. add some functions in there.
Might be awesome. (only a simple idea...)

HaxOr? - February 2, 2012, 4:44 am

(Feb 2, 2012 05:38 AM)kobez Wrote: [\[CITE\]](#) I was going to do something like that for local root exploits ;)

@HaX0r - Sounds great mate, I'll hook up the port designation soon ;)

@InQontroll - Thanks mate, so far its coming along nicely :D

Oxy - February 2, 2012, 4:50 am

Oh wait.

Is it possible to make a shell spread?

So it spreads in directory and is hard to delete?

Unless you do it yourself?

You know. like a virus inprints itself on a computer somethimes...

kobez - February 2, 2012, 4:51 am

I think it'll be easier for users to upload files on the current directory they are into
Otherwise, some people are just too lazy to find their specified directory to upload their files lol
You can make up two options bro

kobez - February 2, 2012, 4:59 am

Thanks man :D Glad you like it.

I'll see what happens mate ;)

-zerocool - February 3, 2012, 11:52 pm

I can see project is going nice. . .

kobez - February 4, 2012, 12:07 am

UPDATE: Just Completed the Email Bomber and File Uploader.

File Upload - Allows you to upload any type of file, at any size to the current directory!

Email Bomber - Allows you to bomb an email as many times as you want, even allows you to specify which email you want them to see it "from"

BACK CONNECT: Is still in progress, it should be completed really shortly! ?

PHP PROXY: Progress has just started on a PHP Proxy, so that you can use the shell to browse ;) should be done, its roughly around 65-70% complete!

Email Bomber

And thanks for the feedback, do you possibly have an idea of a name for the shell?
I have an idea, just don't name it, no title, don't even put the word "shell" in it, this will keep it SUPAA PRIVATE ;)

Otherwise ppl will go like: google - intitle:KobeZ Ownz Biatches - And steal your shell ...

kobez - February 4, 2012, 12:58 am

(Feb 4, 2012 01:56 AM)IDrinkMooMooMilk Wrote: [\[CITE\]](#) I have an idea, just don't name it, no title, don't even put the word "shell" in it, this will keep it SUPAA PRIVATE ;)

Otherwise ppl will go like: google - intitle:KobeZ Ownz Biatches - And steal your shell ...

Good idea, but the shell does need a title :/

I've already set up some good google anti-crawl so people can't use dorks to find my shell ?

Also, only a select few that i choose are going to get their hands on the shell, I don't want to have skids running round using my shell, if you get what I mean. I've put hard work into this, and they aren't gonna reap the rewards :P

Unless, I sell it, which is a maybe ;)

5. WeLog.php

Got more names if you need

At the moment, see if you can choose anyone of the above

If you don't feel comfortable, I'll add more suggestions :P

Those are some good suggestions, but by names i mean like a shell name, like "WSO Shell", "PHPJackel" etc ;) ahahah

Andora - February 4, 2012, 1:27 am

(Feb 4, 2012 02:25 AM)kobez Wrote: [\[CITE\]](#) Those are some good suggestions, but by names i mean like a shell name, like "WSO Shell", "PHPJackel" etc ;) ahahahI laughed really hard when he did the 403.php etc...

OH NO I RENAMED THE SHELL ??

??

Owh I see :P
Well you can make countless abbreviations of your name bro
Could be KBZ Shell
or

PHPRoot

A bunch of sexy names ?

kobez - February 4, 2012, 1:32 am

You got any ideas for some functions in the shell?

You can pretty much add an SMS bomber you made recently
Would be cool having other unique features in a shell :P

kobez - February 4, 2012, 1:38 am

(Feb 4, 2012 02:36 AM)-Zer0Freak- Wrote: [\[CITE\]](#) You can pretty much add an SMS bomber you made recently

I'll think about it, the SMS bomber only covers about 12-15 countries at most :/

Best Teemo NA - February 4, 2012, 1:41 am

01001011 01101111 01100010 01111010 01110011 or,

S29ienM=

Sound good? lol

Zhen. - February 4, 2012, 1:41 am

(Feb 4, 2012 02:38 AM)kobez Wrote: [\[CITE\]](#) I'll think about it, the SMS bomber only covers about 12-15 countries at most :/
Wouldn't be a lot of problem
15 common countries would suffice the need of an SMS Bomber

Another feature would be the MD5 Cracker or a UDP Flooder script which could be used for DDoSing

kobez - February 4, 2012, 1:44 am

(Feb 4, 2012 02:41 AM)?Echelon Wrote: [\[CITE\]](#) 01001011 01101111 01100010 01111010 01110011
or,

S29ienM=

Sound good? lol

You forgot the 'e' ;) ahahah

(Feb 4, 2012 02:41 AM)-Zer0Freak- Wrote: [\[CITE\]](#) Wouldn't be a lot of problem

Another feature would be the MD5 Cracker or a UDP Flooder script which could be used for
DDoSing

Already adding MD5 cracker, I'll write a script to just auto drop a UDP flooder in a few locations and
have it emailed to end-user ;)

Zhen. - February 4, 2012, 1:46 am

(Feb 4, 2012 03:30 AM)powerbk2 Wrote: [\[CITE\]](#) Ahh legit mate with legit awesomeness ;) Thanks mate ?

URGENT: I need some hackers to test out the "Back Connect" feature of the shell for me :D

Post here if you're up for it.

Screenshot

03storic - February 4, 2012, 2:45 am

I'm willing to test it out dude, although i'm on a friends computer so I might have to play around with it a bit to get the ports open :P.

kobez - February 4, 2012, 3:42 am

UPDATE

The back connect seems to be working fine, there are a few bug issues that need sorting out, related to the daemon features, but that should be sorted out.

So for now, the progress report.

Back Connect is at 80%-95% Complete! :D

SCREENSHOT

Zhen. - February 4, 2012, 3:47 am

Willing to test it out if you need anything bro :)

kobez - February 4, 2012, 3:54 am

(Feb 4, 2012 04:47 AM)-Zer0Freak- Wrote: [\[CITE\]](#) Willing to test it out if you need anything bro :) Hit us up with a PM bro, i need to see if the bug fixes work for others aswell :P

Bacardi - February 4, 2012, 4:17 am

I'm free for testing. Was busy on a shelled website anyway, so I might as well help out :)

kobez - February 4, 2012, 4:18 am

(Feb 4, 2012 05:17 AM)Bacardi. Wrote: [\[CITE\]](#) I'm free for testing. Was busy on a shelled website anyway, so I might as well help out :)

Already got people testing it as we speak :D

They shall post screenshots real soon!

Bacardi - February 4, 2012, 4:19 am

Oh haha, already sent you a PM before I saw your post :\$

kobez - February 4, 2012, 4:31 am

(Feb 4, 2012 05:19 AM)Bacardi. Wrote: [\[CITE\]](#) Oh haha, already sent you a PM before I saw your post :\$

All good man ?

Shells coming along nicely! PHP Proxy is around 65-75% complete :D

HaxOr? - February 4, 2012, 4:39 am

Can i test it too? :)

It looks great!

kobez - February 4, 2012, 4:41 am

(Feb 4, 2012 05:39 AM)?? ? x O r ? Wrote: [\[CITE\]](#) Can i test it too? :)

It looks great!

I'm busy applying some bug fixes and moving the stuff around in the layout, give me about 10 minutes.

(this is to you too Bicardi)

03storic - February 4, 2012, 5:03 am

Wow your progressing really fast with this dude, don't sacrifice speed of release for quality. :)

SpriteZ - February 4, 2012, 5:06 am

This looks awesome, kobez. Good job.

kobez - February 4, 2012, 5:09 am

(Feb 4, 2012 06:03 AM)03storic Wrote: [\[CITE\]](#) Wow your progressing really fast with this dude, don't sacrifice speed of release for quality. :)

Thanks :)

I know, thats why im going through tons of bug fixes and enhancements ;)

(Feb 4, 2012 06:06 AM)SpriteZ Wrote: [\[CITE\]](#) This looks awesome, kobez. Good job.

Thanks mate glad you like it ?

UltraCyber - February 4, 2012, 5:16 am

This shell is freaking awesome mate, I will think about some suggestions otherwise this shell don't need any more I think.

Zhen. - February 4, 2012, 5:19 am

KBZ Shell Report

Shell Creator: kobez

Tester: -Zer0Freak-

==

First Part: Server Information

Works like charm, everything is perfectly viewed

Properties of the System are viewed as follows

1. Server Name
2. Hostname
3. Server Software
4. MAC Address
5. Host IP
6. Current Directory
7. Server Temp
8. User ID
9. PHP Version
10. SQL Version
11. Safe Mode

12. Open Base Directory

13. Read 'etc/passwd' ?

14. Magic Quotes

ScreenShot:Spoiler [\(Click to View\)](#)

==

Second Part: Directory Browser and File Reader

Browses all files in the current directory.

Allows you to navigate to different locations of your choice

What are viewed in the Directory Browser

1. Current Directory (ex. /home/website/public_html/
2. File Count (Shows the number of files in the current directory)
3. Filename (Name of the files)
4. Filetype
5. File Size
6. Last Modified (Shows date of last file modification)
7. File Permissions (Views the permission according to chmod)
8. Owner/Group
9. Download (Allows you to download file)
- 10.View (Views the file and it's source)
11. Delete (Delete file)
12. Edit (Enables file editing)
13. Allows you to browse other directories

Other features:

1. File View

Whenever a file is being clicked, a new tab opens up and shows it live which then allows you to alter the code if needed

Screen Shots:

Directory Browser: Spoiler [\(Click to View\)](#)

File Editing: Spoiler [\(Click to View\)](#)

==

Third Part: Mail Bomber

Works efficiently

Can be used to Spam, Send Mails to anyone

What it can do?

1. Send countless number of custom messages to anyone
2. Can be use to send mails anonymously with any email
3. Pretty stable and friendly GUI, helpful for newbs
4. Unlimited Space of message box

Screenshot: Spoiler [\(Click to View\)](#)

==

Fourth Part: File Upload

Easiest uploader and very friendly GUI

Uploads within one click and very simple to use

What it does?

1. Uploads any file of your choice
2. Shows the following properties after file has been successfully uploaded

*Upload (The name of the file)

*Type (Type of file being uploaded)

*Size (Size of the file)

*Stored in (Shows the directory of the file you uploaded in to)

Screenshot: Spoiler ([Click to View](#))

==

Fifth Part: Back Connect (Both in C and Perl)

Works pretty easily and again a friendly GUI

1. Can enter IP address manually
2. Any port can be entered

Requires the router being used to be port forwarded before applying this feature

Screenshot: Spoiler ([Click to View](#))

Looking forward for more features :)

Full report: <http://pastebin.com/Nekgseng>

Have you implemented the connection features from [this script?](#)

kobez - February 4, 2012, 5:51 am

(Feb 4, 2012 06:30 AM)03storic Wrote: [\[CITE\]](#) Have you implemented the connection features from [this script?](#)

Negative mate.

Use a different back connect method ?

IDrinkMooMooMilk - February 4, 2012, 6:07 am

(Feb 4, 2012 06:51 AM)kobez Wrote: [\[CITE\]](#) Negative mate.

Use a different back connect method ?

Does your shell got self removal ?

- Just popped into my mind :p

kobez - February 4, 2012, 6:09 am

(Feb 4, 2012 07:07 AM)IDrinkMooMooMilk Wrote: [\[CITE\]](#) Does your shell got self removal ?

- Just popped into my mind :p

Yes it does :P

Just run the delete command in the file browser to delete it ?

Best Teemo NA - February 4, 2012, 7:35 am

The shell is very good man also backconnect is fine.

POC:

Spoiler ([Click to View](#))

[Img]<http://s15.postimage.org/qkl5qo3m3/image.png>[/Img]

But I noticed when I uploaded a 404 shell after it refreshed the 404 did not show up in file browser but I got the location of it in the upload tab and btw it was like \ not /

kobez - February 4, 2012, 7:39 am

Just refresh the shell and it should show up in the directory lister ;)
there's a check the upload script runs through to see if there's a script with the same name, if there is, it cancels the copy, maybe that's why?

Best Teemo NA - February 4, 2012, 7:42 am

(Feb 4, 2012 08:39 AM)kobez Wrote: [\[CITE\]](#) Just refresh the shell and it should show up in the directory lister ;)

err any and all logs that says we are there? Also for backconnect you could use,

PHP Code

```
<?php  
$_SERVER['REMOTE_ADDR'];
```

To auto fill in our IP :p

kobez - February 4, 2012, 9:10 pm

(Feb 4, 2012 10:08 PM)?Echelon Wrote: [\[CITE\]](#) err any and all logs that says we are there? Also for backconnect you could use,

Jeez and you got really good really fast

Where did you learn PHP from?

Did you know any previous coding languages?

kobez - February 5, 2012, 7:44 am

(Feb 5, 2012 08:08 AM)Elder Scrolls Wrote: [\[CITE\]](#) Jeez and you got really good really fast

Where did you learn PHP from?

Did you know any previous coding languages?

when it comes to stuff like this, I just memorize it :P

once you learn the language and commands, it's easy :P

I just refer to php.net whenever I don't understand something :P

only other coding I can do is HTML/CSS/JS/some perl and some C++

@All - I still need suggestions of features you'd like to see in this shell !

UPDATE : Ive got the delete function of the logcleaner working, just having a few issues with the finding of the paths of the log files. it's at 65-70% ;)

PHP Proxy - a few technical issues that need sorting out, should be completed real soon ;)

Directory Browser - currently recoding the whole thing, to allow directory traversal, and go up in directories, possibly all the way to root directory :P

Bacardi - February 5, 2012, 7:44 am

While I was on a shelled website, I found a symlink script.

Might be something to check out and maybe implement it somehow. PMing you the script.

gatopardos - February 5, 2012, 7:59 am

LuLz any way I can get that symlink code as wel??

kobez - February 5, 2012, 3:14 pm

@Bicardi - I've already started my auto-symlink script which should be completed soon, this can give me another vector to symlink from :P thanks.

gatopardos - February 5, 2012, 3:21 pm

Hey kobez I noticed you had the wahh handbook in your blog if you can please share it with me! what r u trying to do with the shell?

Bacardi - February 5, 2012, 4:21 pm

(Feb 5, 2012 04:14 PM)kobez Wrote: [\[CITE\]](#) @Bicardi - I've already started my auto-symlink script which should be completed soon, this can give me another vector to symlink from :P thanks.

Sounds good! But yea, like in PM. I haven't got the chance to test it yet.

I've got a few shelled websites with different linux distros (CentOS etc).

1n54n3 - February 5, 2012, 5:42 pm

Bro.Kobez what is the function of the Backconnect in your shell?

How did I do that?

Sorry I'm a noob not like others.

BTW, Can't wait to see your very Good KBZ Shell. :)

kobez - February 6, 2012, 2:05 am

Just got back from being out all day :P

Still completely recoding the directory browser :P (not much fun ahah)

Almost have the log cleaner 100 % complete! :D

and I should probably finish off the PHP Proxy :P

Best Teemo NA - February 6, 2012, 2:10 am

I like the GUI it is :D

ask some of the people that have tested it so far, they love it aswell, ALOT easier to find stuff ;)

(Feb 7, 2012 06:39 PM)Elder Scrolls Wrote: [\[CITE\]](#) Kobez I am currently learning php. Did you use any tutorials or books to learn PHP? If so, can you tell me the names.

Hey mate, just drop me a PM and I'll gladly help you out :)

einbrettholz - February 8, 2012, 1:08 am

this looks supersweet.

i dont know how or if you are going to merchandise this, but if you sell for a reasonable price, i would buy.

i also tried to get a clean shell for ages, but everywhere there is crypted code inside and you really never know.

have fun coding.

kobez - February 8, 2012, 1:10 am

Quick question, If i was to sell this, what would be an appropriate price?

And don't worry this shell is going to be 100% clean, going to encrypt the source myself to prevent leaching and backdooring :)

03storic - February 8, 2012, 2:33 am

90% of the time all the encoded function's are things that would normally be detected by AV's, most hidden backdoor's are really badly hidden.

kobez - February 8, 2012, 3:01 am

(Feb 8, 2012 03:33 AM)03storic Wrote: [\[CITE\]](#) 90% of the time all the encoded function's are things that would normally be detected by AV's, most hidden backdoor's are really badly hidden.

Exactly, hence my custom encryption ?

Also to protect the integrity of my shell.

UPDATE: Thanks to some help from fellow members giving me an idea, I've completed the find function in the log cleaner (to search for the direct path of the log files). I've also completed the delete function of the Log Cleaner. I'm going to roll it out real soon for testing :D

Can someone tell me where to put the "Delete All" text/button :P

Log Cleaner [08-Feb-2012]

As you can see, it currently will run through the list of possible log file names, and return if they were Found (green tick) or not found (red cross) and then display it for you in a table, It searches through the document root, which allows multi-OS log cleaning ;D

Best Teemo NA - February 8, 2012, 4:28 am

What about a master check box to delete all?

kobez - February 8, 2012, 4:32 am

(Feb 8, 2012 05:28 AM)?Echelon Wrote: [\[CITE\]](#) What about a master check box to delete all?

Just created a link to delete all of them :D don't think it needs a checkbox.

Bacardi - February 8, 2012, 4:41 am

Oh my lord, the shell is looking better and better AND better. Can't wait!

kobez - February 8, 2012, 4:50 am

Looking forward to that bruh! :P

Nice work right there

kobez - February 9, 2012, 7:01 am

UPDATE: Just added a function to automatically create/drop a UDP folder straight to the webhost, no need to upload it at all :D

it's all done by the push of a button.

I'll add screenshots tomorrow when I get a chance :D

also, the new directory browser is at around 75%, it will allow you to browse other directories now :)

Professional Hacker - February 10, 2012, 12:54 am

Add a cPanel, FTP, SMTP bruteforcer and maybe a port scanner.

An IP lookup tool, checking of open port (for rooting) and some other kinda options.

I would like to test it out.

-zerocool - February 10, 2012, 1:02 am

Shell is going to be best one . .

I am waiting. .

kobez - February 10, 2012, 1:10 am

(Feb 10, 2012 01:54 AM)Professional Hacker Wrote: [\[CITE\]](#) Add a cPanel, FTP, SMTP bruteforcer and maybe a port scanner.

I would like to test it out.

I'm writing a totally different function that won't require any need to bruteforce any of these

functions.

Don't worry, already added a reverse-ip lookup to show other sites hosted on the same IP.
Don't need a port-scanner, cause i already have a back-connect tool that spawns a shell for the hacker. easy peasy :)

Sorry you can't test it, wouldn't be private now would it. Besides I already have my testers.

(Feb 10, 2012 02:02 AM)?,.*?z??ø cööl?*.,? Wrote: [\[CITE\]](#) Shell is going to be best one . .

Gosh this reverse ip is pissing me off :/

Mudkip - February 10, 2012, 5:52 am

Shell looks cool.

Inb4 a new update.

kobez - February 10, 2012, 6:02 am

UPDATE TIME!

+ UDP FLOODER Creator is now complete, it will spawn a UDP flooder with any file name you choose (bare in mind you just have to put in a name, like KOBZ, not KOBZ.php since it already appends the filename with .php ;P)

+ Finally got the reverse ip lookup working. it also ping's the individual sites and shows if they are up or not !

---> Suggest tools for me to add to the "Tools" Section guys! :D

SCREENSHOTS
