Thread: [How do I RAT some one through MSN/Skype/Yahoo etc? Icon problem, please read and help](#)

Triple H - February 3, 2012, 11:02 am

When ever I send some one my server on skype. I see it like this when sending:
[img]http://screensnapr.com/e/XrkRtb.png[/img]

BUT the problem is here.
The target who is receiving it will see it like this:

[img]http://screensnapr.com/e/1VhjpK.png[/img]

Same problem on MSN and Yahoo as well.
The receiver always sees the real icon and not the icon I have selected when crypting it using no\$crypter.
The icon I have selected is the windows 7 image icon.

How do I fix this problem?
How do I make the receiver see the fake windows 7 icon also ? :(

???????? - February 3, 2012, 11:17 am

The only way around this is to upload your file to a site like www.sendspace.com then send them the link to it..
If its a picture tell them you can't send it via skype/msn because it's playing up, so you uploaded it for them

Hope this helps/

Stuck In Your Radio - February 3, 2012, 11:18 am

Do you use a crypter? And does your crypter have a built-in icon changer? If so, that might be the issue. :)

Drag files here or click browse to uploadSorry, The upload facility is not available.

Large document doesn't allow me to upload SCR files.

Stuck in your radio: yes my crypter does have a built in icon changer. I change the icon with it, still doesn't work. I have tried changing the icon when making the RAT with darkcomet 5 also, still same issue!!

???????? - February 3, 2012, 11:21 am

Try uploading to
Mediafire
filehold.net

If you still cant use none of those, i advise on getting dropbox you wont have any issue's then
<http://www.dropbox.com>

does icon changer work? i have some good icons dude :)pm me if need help

Triple H - February 3, 2012, 11:41 am

The icon changer works!

The person doesn't want to download it from filehold.net ;(he wants me to send it over on the IM

phanatos88 - February 3, 2012, 11:47 am

make it just a .scr..

create server

crypt it, change the file extention to .scr THEN change the icon, id suggest you change it to an actual picture of a girl, use a jpg to ico changer online, make it more believable than just a jpg icon

most will be fooled by the .scr extention

Decided to bump this thread instead of making an entirely new one. It's been almost two years, has anyone found out anything new in regards to this? Just lost a potential virus victim because he saw the .exe icon on Skype.
