Thread: [\[TUT\]How to spoof your iOS firmware \[/TUT\]](#)

Retribute - February 3, 2012, 12:48 pm

Hey guys, today I will be teaching you how to spoof your iOS firmware.

--

You will need the following:iFile

Jailbroken Device

Alright, so let's start spoofing!

First, open up iFile which you can get via Cydia. After opening, navigate to the "/"

After you're in "/", navigate to /Systems/Library/Coreservices/Systemversion.plist and then open the file with Text viewer.

Now click "Edit" and edit the firmware string to your desired firmware and click Save.

All you need to do now is to reboot the device! Enjoy.

And let me try this and report back.

Excellent Tutorial if it works.

Great job, Rubiks! Looks like an easy-to-follow tutorial.

This should come in handy for some people looking for specific apps and such. I might as well try it on my iPod when I find it again.

Works but my spring board crashes after I reboot.

Yup I did it and my spring board crashed.
I just put it back to default.

Actualt it works. But it's pointless. It canttrick Cydia...
It tricks AppStore, butthe actual apps won't run.
Still pretty cool though...
