Thread: [\[TUT\] System Information \[TUT\]](#)

master4all - February 5, 2012, 12:19 am

Hi HF,

Time Since Last Reboot

```
Code Dim timeSinceLastRebootMinutes As Double = My.Computer.Clock.TickCount / 1000 / 60
MsgBox("It has been " & CInt(timeSinceLastRebootMinutes).ToString() & " minutes since your
last reboot.")
```

OS Information

```
Code MsgBox(My.Computer.Info.OSFullName & vbCrLf & "Version " &
My.Computer.Info.OSVersion)
```

Time Zone

```
Code If (TimeZone.CurrentTimeZone.IsDaylightSavingTime(DateTime.Now)) Then
MsgBox("The current time zone is: " & TimeZone.CurrentTimeZone.DaylightName & ".")
Else
MsgBox("The current time zone is: " & TimeZone.CurrentTimeZone.StandardName & ".")
End If
```

Framework Version

```
Code MsgBox("Framework Version: " & Environment.Version.ToString() & ".")
?????
```

Sweet! I will be using these in my project, Thanks.

pulzeultra2000 - October 13, 2012, 2:18 pm

thank alot for this op! Very usefull

logging*machine - October 13, 2012, 2:21 pm

I don't find this too useful, but okay.

nathan72389 - October 13, 2012, 4:44 pm

this is not a tutorial, its more like ..

"look what i found"

Cody8295 - October 13, 2012, 4:46 pm

Mind like posting the source? Because

Malloc - October 13, 2012, 4:49 pm

This is not a tutorial, in fact I bet you copy and pasted these sections of code from another resource without giving credit.
