Thread: [I changed my RAT server.exe to a .rar \[I HAVE A SIMPLE QUESTION\]](#)

MARKD3ANGELO - February 7, 2012, 12:39 am

Ok so I just attempted to hide my rat server in a jpg following this threads directions
<https://hackforums.net/showthread.php?tid=1554886&highlight=hide+exe>

Just have 1 question..Now that my server is a RAR file will a victim have to download AND unpack my server from winrar or winzip, in order for my rat to be installed on his pc

Or can my rat be installed on his pc from him simply downloading my link[Without Unpacking Files] ???

Thanks..

The only way that would work is if your exe file was already extracted from the winrar archive, plus it would have to be a Java Drive By considering the file can't execute itself.

Next time [MARKD3ANGELO](#), please post in the correct section. This would belong in the [Remote Administration Tools](#) section.

Mark, for it to be executed the server which you renamed to something like example.jpeg and the .lnk shortcut (which is what executes your server) both need to be in the same folder when executed. So if you RAR it and the user executes the files from the rar explorer it will not work, he would have to extract both of them into the same folder before executing which is unlikely. Your best chances are to avoid compressing them.
