Thread: [HIDE "evil" URL into A LEGIT URL {MUST KNOW}](#)

Exploithero - February 7, 2012, 8:14 am

I want to share a way to hide your "evil" webpage into a legit URL!

So, we want to hide a "evil" site into a legit address(google)

We type for www.google.com%01@evilsite.net/

In this way ONLY google.com will be visible! Thats great for phising;)) (fake login pages)
HAVE FUN;D

CandyHacker - February 7, 2012, 8:24 am

i dont undertand

give more example of what to add and were

caddyhx22 - February 7, 2012, 8:33 am

hey candy hack what are you into mate,will exchange information and ideas?

Phased Out - February 7, 2012, 8:34 am

it only gives you a warning saying yo uare being tricked >.<

3lit3 - February 7, 2012, 8:37 am

It's simple. www.google.com is being used as username to access evilsite.net .This makes visitor thinks he is going to use google but goes to evilsite.net but this method is no effect nowadays because we get the following confirm box

Exploithero - February 7, 2012, 8:42 am

True:/ you can hide a fake login screen and You can get alot of passwords,username!! Just be creative..

leo101010101 - February 9, 2012, 4:44 pm

this works well in chrome but doesnt work at all in IE and firefox gives out a warning but useful if you know they use chrome

Kevin?? - February 9, 2012, 6:39 pm

Yeah just tried it, it does still work on Chrome though haha.

Exploithero - February 10, 2012, 1:36 am

:) happy phising!! I tested and it worked:D tnx

ReapZ1 - February 10, 2012, 3:03 am

Useless Thread. In my opinion. You can just use a link shortener.

Snoepie1012 - February 10, 2012, 7:41 am

:facepalm:

Point is: Links that looks legit are more trusted.

@OP Indeed, still works on chrome :)
