Thread: [\[News\] kobe's private shell](#)

SIM-974023 - February 12, 2012, 4:38 am

I have known kobe's for a bit, very helpful, but let's cut that part his shell is what this thread is about!.

As you may or may not know [kobe's](#) the very well known hacker and helper is working very hard on his private shell.

This shell is unique to others, it includes some features other shells don't have, this is the whole package!

You may check out his thread [here](#) for all the latest updates and news what's going on.

This is going to be selling for \$20.00

If you ask me that's pretty cheap for a shell that is diverse and better than all other shells out there!

In my own opinion kobe's has been working extremely hard on this shell and for his efforts to be lost and for someone to leak it is not fair at all.

Current Features

Hostname

Host IP

Server Software (uname -a)

Current Directory + Base Directory

PHP Version

SQL Version

User ID (userID,groupID,processID,name)

Safemode Check

Magic Quotes Check

Open Base Directory Check

Read 'etc/passwd' File Check

Mass Mailer (Email Bomber)

File Uploader

Directory Browser [PROGRESS : 90% Complete]

Backconnect (c, perl) [PROGRESS: 98% Complete]

Log Cleaner 99% Complete

Reverse IP Lookup (Also checks if site is online)

UDP FLOODER Creator (No need to have to upload it, just create one ;)!)

Soon To Be Added

Auto Backdoor

Password Protection (Possible?)

Safemode Bypass

Magic Quotes Bypass

Auto-Symlink (Possible?)

PHPProxy

Local Root Exploit Search

(More As he Progress's?)

This was just a little update, news and my opinion.
Thanks for taking the time to read.

Nerv - February 12, 2012, 4:40 am

The fact is people WILL leak it.
Selling an open source piece of software isn't going to get you far.

SIM-974023 - February 12, 2012, 4:42 am

(Feb 12, 2012 05:40 AM)Nerv Wrote: [\[CITE\]](#) The fact is people WILL leak it.
Selling an open source piece of software isn't going to get you far.
It's going to be strongly encrypted.
But hopefully he will make enough before some skid leaks it.

Nerv - February 12, 2012, 4:46 am

So what is he going to obfuscate the whole thing and make it use some type of database account type system?
It seems like a really big deal for a shell even though it does look really nicely made.
The fact is eventually someone who has nothing better to do will crack it and leak a plaintext copy which if course then will include the database user/pass which isn't good at all.
Yeah he could make it connect to a textfile or something but as i said its just a lot of work for a php script designed for nothing more than being a backdoor.

SIM-974023 - February 12, 2012, 4:47 am

Yeah he could make it connect to a textfile or something but as i said its just a lot of work for a php script designed for nothing more than being a backdoor.
I suppose so, but he will be careful who he sells it too.
He is pretty smart, that's just wait and see what he comes up with :)

Best Teemo NA - February 12, 2012, 4:52 am

Ive already PM`d kobez about a way to keep track of each shell per member without HWID ect also the consequences would be pretty heavy if they leaked it.

SIM-974023 - February 12, 2012, 4:55 am

(Feb 12, 2012 05:52 AM)?Echelon Wrote: [\[CITE\]](#) Ive already PM`d kobez about a way to keep track of each shell per member without HWID ect also the consequences would be pretty heavy if they leaked it.
What was his response?
And there is nothing much he can do about a leak, well at least I don't think so.

Nerv - February 12, 2012, 5:00 am

Personally I think this is a massive overreaction to a php shell lol.
But then again it does look pretty damn nice, I'd buy it myself but I'm pretty happy with my simple

self coded scripts.

Best Teemo NA - February 12, 2012, 5:00 am

He loved it as its a full proof thing.

HaxOr? - February 12, 2012, 5:01 am

I still don't see the reason anyone will buy it.
It pretty much have the same tools any shell have so no point throwing 20\$ into the wind.

But,i wish you Kobez good luck with this. :]

kobez - February 12, 2012, 5:02 am

can you un-encrypt that ? :)

Don't worry, I've got some stuff sorted with Echelon, this shell won't be leaked, and if it does, we will know who did lul ?
It's sorted.

SIM-974023 - February 12, 2012, 5:02 am

This is kobe's shell, he is a good friend.
I'm must posting about it.

Techie??? - February 12, 2012, 5:21 am

Wait, I don't think that this shell needs to be protected heavily.

Every shell creators work hard. But they are releasing it opensource.

Anyway, good luck.

SIM-974023 - February 12, 2012, 5:23 am

(Feb 12, 2012 06:21 AM)T?chie Wrote: [\[CITE\]](#) Wait, I don't think that this shell needs to be protected heavily.

It's sorted.

So you don't have a Password protect feature? ?

Zhen. - February 12, 2012, 5:38 am

I have made a review of it:

<https://hackforums.net/showthread.php?tid=2168934&pid=19658378#pid19658378>

<http://pastebin.com/Nekgseng>

Also, I've documented a five page manual instructions and main features in this shell

But I was surprised about the prize. I don't think a shell can be worth that much of a \$20 to me :/

Techie??? - February 12, 2012, 5:39 am

(Feb 12, 2012 06:23 AM)-DaleANON- Wrote: [\[CITE\]](#) Most shell releases are free, I believe he has custom coded this.

Most shells are custom coded.

But most of the shells today are a modification of either C99 or R57. His shell maybe coded from scratch but lacks some important, essential features.

Also, it is nearly impossible to keep a PHP script "un-leak-able".

SIM-974023 - February 12, 2012, 5:43 am

Also, even though his shell is good in looks it lacks many things.

Password protection, SQL Manager, Undetectable by search engines etc.

@ kobeZ : Don't take my criticism as a thing against you. You can always use this criticism as a step to increase the power of your shell. You were my friend and I'm always loyal to my friends.

kobeZ - February 12, 2012, 5:44 am

My shell is 100% coded from scratch.
Don't worry, already adding some features that you don't see in any other shells.
Sql dumper that dumps in a matter of seconds is just one of them.

Mudkip - February 12, 2012, 5:45 am

(Feb 12, 2012 06:43 AM)T?¢hie Wrote: [\[CITE\]](#) Also, even though his shell is good in looks it lacks many things.

Will you be selling your shell through HF Marketplace?

HaxOr? - February 12, 2012, 5:54 am

I'm pretty sure that,when someone buy it,will hack a site and will use your shell to deface it.

In most cases he will leave it and someone will find it.

No matter he can't decrypt it,free shell for him.

He can easily give it out.

Techie??? - February 12, 2012, 5:57 am

I've set an auto-delete function that will remove the shell after a certain quota of uploads/operations ;)

SIM-974023 - February 12, 2012, 5:59 am

(Feb 12, 2012 06:57 AM)T?¢hie Wrote: [\[CITE\]](#) Also 90% of products sold get leaked after days. ? Agree with you on that one, maybe not 90% but most products get leaked.

Techie??? - February 12, 2012, 6:02 am

So my final word on this.

Even if you protect your shell with the best obfuscation, it can be decrypted.

If you sell to a person, it can get leaked.

As HaxOr said, mistakes can lead to problems.

Good luck. :)

kobez - February 12, 2012, 6:16 am

Thats alright mate, i understand where you are coming from, this shell is far from done though ? should see the features im adding ;)

Mx. - February 12, 2012, 7:04 am

im sorry but i find this an absolute joke, cool that u can code a shell and what not, but fkken useless to sell it.

A common <? system(\$_GET['Mx']); ?> will do more good in proper hackers hands, then an

overloaded 200kb+ shell lol.

kobez - February 12, 2012, 7:06 am

(Feb 12, 2012 08:04 AM)Mx. Wrote: [\[CITE\]](#) im sorry but i find this an absolute joke, cool that u can code a shell and what not, but fkken useless to sell it.

A common `<? system($_GET['Mx']); ?>` will do more good in proper hackers hands, then an overloaded 200kb+ shell lol.

This is only the shell im showing the public, should see the other one ?

But yes i understand, i took the project on to see how far i could go with PHP and so far its been rather good :)

Careless. - February 12, 2012, 8:05 am

Why would I buy a shell with features that other public shells have?

SIM-974023 - February 12, 2012, 8:21 am

(Feb 12, 2012 09:05 AM)Careless. Wrote: [\[CITE\]](#) Why would I buy a shell with features that other public shells have?

Did you even care to read it?

This shell has features others don't, I can see why people wouldn't buy it but please make a decent post.

Careless. - February 12, 2012, 9:09 am

(Feb 12, 2012 09:21 AM)-DaleANON- Wrote: [\[CITE\]](#) Did you even care to read it?

This shell has features others don't, I can see why people wouldn't buy it but please make a decent post.

Uh?

Let's see.

Features:

Hostname - Duh.

Host IP - herp.

Server Software (uname -a) - derp.

Current Directory + Base Directory - _ -

PHP Version - Duuh

SQL Version - DUUUH

User ID (userID,groupID,processID,name) - duh.

Safemode Check - Duh

Magic Quotes Check - Maybe not on all, but on some + you can check it manually

Open Base Directory Check - Duh

Read 'etc/passwd' File Check - Duh

Mass Mailer (Email Bomber) - Old / Nothing new

File Uploader - Duh

Directory Browser [PROGRESS : 90% Complete] - Got to say, my shell hasn't this.

Backconnect (c, perl) [PROGRESS: 98% Complete] - Duh.

Log Cleaner 99% Complete - A log cleaner built in in a shell is nice, can be downloaded tho as a standalone (it's handy, nice).

Reverse IP Lookup (Also checks if site is online) - That one is on some shells can be done manually on yougetsignal.com tho.

UDP FLOODER Creator (No need to have to upload it, just create one ;!)) - Seen plenty of shells

with this shit built in already :)

The auto backdoor features and the other ones soon to come are as well 'public' or used on other shells.

I mean 20\$? no.

Uh and thank you for not getting butthurt.

SIM-974023 - February 12, 2012, 9:15 am

(Feb 12, 2012 10:09 AM)Careless. Wrote: [\[CITE\]](#) Uh and thank you for not getting butthurt. Please if you are going to have a debate i'm happy enough if you act older than 10. Good day, skid!

Well, let's debate then.

Who are you?

You are a 'grey hat hacker'.

Hmm. Alone that Hackforums is one of the worst hacking forums ever (it has good sides, such as marketing, web masters and other stuff like gaming but about hacking: People on here are google newbies that google 'how to hack facebook' and get on a thread where someone shows you how to 'hack' someone using a keylogger, which is not even hacking.) you are publishing your hacks and claiming something. You are defacing websites.

Point of defaces?

-> Get famous

-> Proove how cool you are.

Now, what for are you defacing?

For fame, and only.

Well, you may put up some adf.ly links to earn 0.001\$ a click. Good luck with these on sites you deface that are not even known.

Defaces can be done for private reasons, for example revenges. But still, you can make a lot more use of it than defacing. Even tho, defacing is still useless afterall, you will claim other. I support anyone's opinion on these things, but I just cannot stand it people being butthurt about others opinions.

I am trying to talk with you in a way an adult would do it, you call me skid. Tbh, I don't really care much, just the way people are 'debating' is sad. I would of course continue debating with you, but in a mature way.

But now, about 'skid'. I am pretty much sure that you do not know EVERYTHING about web application hacking but also about the server side hacking like exploiting the softwares installed, like finding buffer overflows etc.. Also, I never claimed I'm a hacker. Maybe I am interested in all this stuff, maybe I hacked sites or servers but used them for my private use just because I do not see the point in defacing and showing off. Afterall, everyone has a start somewhere.

I do not know wether you know more than me, or I know more than you. I am a human, I cannot know it unless I can explore your mind. And remember, just the heads up, being 'l33t' or 'ub3r' does not make you better or more 'pro' than someone else.

Have a good day.

Tookie - February 29, 2012, 11:51 am

Nice. I'd like to see updates ASAP.

SIM-974023 - February 29, 2012, 12:11 pm

I personally don't like defaces, it's the hacking that counts.
Nuff!

Sato - February 29, 2012, 2:09 pm

This..

If I needed to I could write up a php shell with all of these features and more 20 minutes, and still wouldn't consider having people pay to use it.

In response to:

(Feb 29, 2012 03:11 PM)-DaleANON- Wrote: [\[CITE\]](#) Custom coded? And prove it then bro, go ahead.

You seem doubtful that it can be done; your problem is obvious and you're oblivious to it none the less. You know what you see on HackForums and that's not much, in the real world it's not considered a difficult feat at all. I won't waste my time creating a shell to win an argument against you when I can do it in a few sentences.

Let me also state that no offense to Kobez is implied; it is his creation and he can use it however he wishes.

SIM-974023 - February 29, 2012, 2:11 pm
