Thread: [\[Tutorial\]Using Anubis To Test Your RAT](#)

Purple Haze. - February 13, 2012, 2:49 pm

Using Anubis to test your Remote Administration Tool

Today I'm going to briefly explain how to use Anubis to test your remote administration tool. I've seen a lot of people wonder exactly how to use it, so I'll explain.

First off, you'll want to go to the website, which can be found here:

<http://anubis.iseclab.org/>

Here's what you should see ([Click to View](#))

Now scroll down to the bottom where you'll see this:

Spoiler ([Click to View](#))

From here you have two options, to either upload it from your computer, or from a direct link.

NOTE: YOU HAVE TO UPLOAD YOUR UNCRYPTED SERVER OR THIS WON'T WORK!.

Once you add your server, you're going to want to fill out this box to reduce the wait time substantially.

Spoiler ([Click to View](#))

Now click and you should see a screen like this after you're redirected:

Spoiler ([Click to View](#))

It may be a little bit of a wait time, but that's okay.

If done correctly, once it is finished analyzing, you should see something like this on your RAT (The bottom install):

Spoiler ([Click to View](#))

Some things to note: Make sure your ports are forwarded

Make sure you're uploading an unencrypted server

If everything is set up correctly and it's still not working, try rebuilding your server with the same settings. It may be outdated.

If you're still having troubles, feel free to PM me.

Pumpkins - February 13, 2012, 2:51 pm

really good for noobs to check if they've forwarded their port nicely, well explained, welldone! :)

KingKratom - February 13, 2012, 2:51 pm

This is alot better then the other anubis tuts out there, Thanks alot ?

SkyBlooo - February 13, 2012, 2:53 pm

Nice man, just couldn't get past that 4 letter captcha. Shit's legit now.

Spoiler ([Click to View](#))I kid, nice tut.

Purple Haze. - February 13, 2012, 3:57 pm

Don't forget if you're stilling having issues, PM me.

KingCobraXD - February 13, 2012, 4:54 pm

Sorry about that. Just added it in.

F?y - February 13, 2012, 5:01 pm

I posted this a while ago good tutorial tho

KingKratom - February 13, 2012, 5:07 pm

(Feb 13, 2012 06:01 PM)F?y Wrote: [\[CITE\]](#) I posted this a while ago good tutorial tho I remember your tutorial, No offence but this ones more better in details ect i wish it got more views/posts so people stop asking for test installs ?

CyberFudger - February 13, 2012, 5:10 pm

Nice TuT for newbs, :D

i'd rep if i could.

Keep up the good work :)

Edit: Legit Line :3

Purple Haze. - February 13, 2012, 6:35 pm

Thanks for the positive feedback guys. Will update with any new information if necessary.

KingCobraXD - February 13, 2012, 7:54 pm

Thanks for updating it with an image. Now I was also thinking, what happens if you use the remote desktop function?

protocol113 - February 13, 2012, 8:29 pm

I'm not sure what I'm doing wrong but I can't get a connect. And not enough posts to pm. I'm using Darkcomet5 with ports 6778 and 7889

Rafe_D - February 13, 2012, 9:31 pm

Nice Tut mate. Out of curiosity why do you say it doesn't work with FUD servers? Several months ago I tested Anubis with FUD servers and had mixed results. By accident I found that a couple of servers showed up in DC about 15 or 20 minutes after the file had run completely. Whilst the unencrypted servers showed up at about 45% through. Maybe its to do with the crypters used. I dont use Anubis anymore but I would be Intersted to hear your thought's.

(° ? °) - February 13, 2012, 9:32 pm

So exactly why does your server need to be unencrypted?

?Ñâzg?! - February 13, 2012, 9:51 pm

Also keep in mind that uploading a crypted server is like scanning on virustotal
Anubis will send information to a virus database

Onetwo - February 13, 2012, 10:21 pm

Site's up, but won't let me view it. Weird.

Rock3r™ - February 13, 2012, 10:43 pm

Nice work mate. Should reduce the "TEST INSTALLS" threads :)

profdracula - February 13, 2012, 11:57 pm

Great share to help people out. Keep up the good work mate!

Hex B0mb3r - February 14, 2012, 12:17 am

Nice TuT

i'd rep if i could.

Keep up the good work :)

Matthewvl - February 14, 2012, 12:41 am

Does this works good, i hope so want to try it.

Purple Haze. - February 14, 2012, 3:31 am

(Feb 14, 2012 01:41 AM)Matthewvl Wrote: [\[CITE\]](#) Does this works good, i hope so want to try it.
It should work just fine. If something goes wrong, just pm me and I'll help you out.

Predator_Crack - February 14, 2012, 1:54 pm

It has already been posted various times if i am not wrong but you did that correctly and with nice addition of blue color plus skrillex as gift. Thx for sharing and helping others:)

SIM-701256 - February 14, 2012, 1:56 pm

Nice didnt knew it could be done like that ;)

Stev - February 14, 2012, 2:26 pm

O god im so stupid, i accedentaly entered my crypted server... will that cause any problems, like decreasing FUD?

Purple Haze. - February 14, 2012, 2:29 pm

(Feb 14, 2012 03:26 PM)Kohsti Wrote: [\[CITE\]](#) O god im so stupid, i accedentaly entered my crypted server... will that cause any problems, like decreasing FUD?
No it won't affect any of that. It doesn't distribute.

Stev - February 14, 2012, 2:42 pm

(Feb 14, 2012 03:29 PM)?urple Haze Wrote: [\[CITE\]](#) No it won't affect any of that. It doesn't distribute.
Ok thanks for respond, and thanks for guide! I was always wondering how that worked..

KingKratom - February 14, 2012, 2:46 pm

(Feb 14, 2012 03:29 PM)?urple Haze Wrote: [\[CITE\]](#) No it won't affect any of that. It doesn't distribute.
someone posted it did distribute ?

Purple Haze. - February 15, 2012, 3:28 am

(Feb 14, 2012 03:46 PM)?Wooter Wrote: [\[CITE\]](#) someone posted it did distribute ?
Well if you don't use a crypted server, you'll be fine.

anton456456 - February 15, 2012, 7:26 am

Nice tut but it didn't work for me S:

Do u know hot to portforward? cuz i got problems and no idea how to do that.

If you can help me it will be cool :P

Purple Haze. - February 16, 2012, 3:43 am

Rememeber if you need some extra help just pm me. Please post in this tutorial to keep it alive as well.

Johnny Ramone - February 16, 2012, 3:48 am

The site doesn't work anymore for me. It says: This site is running TeamViewer.

Free Port 80 for other applications in advanced settings.

KingKratom - February 16, 2012, 4:40 am

(Feb 16, 2012 04:48 AM)pulpfiction Wrote: [\[CITE\]](#) The site doesn't work anymore for me. It says: This site is running TeamViewer.

pm purple haze if you are having troubles with it. ?

CyberFudger - February 16, 2012, 11:06 pm

(Feb 14, 2012 01:17 AM)Hex B0mb3r Wrote: [\[CITE\]](#) Nice TuT

i'd rep if i could.

Keep up the good work :)

Fucking faggot he C&P my post ¬_¬

On-topic: nice thread though it seems like the stupid "any free installs" threads have been on a low-down, thats a good thing :3

SelfStarter - February 19, 2012, 6:32 pm

Thanks for this TUT I am a noob when comes to RATs and this was very helpful

tim0teh - February 19, 2012, 6:33 pm

why does it never work for me? i always get the google chrome error window.

Justice - February 29, 2012, 4:33 pm

Nice tutorial bro, it's easy to follow and smooth.

Thanks for the share.

@tim0teh, maybe try using firefox? hmm. that's never happened to me before ._.

preetam - February 29, 2012, 8:04 pm

Nice tutorial, will try it out, thanks in adv dude.

NINJ4Z - February 29, 2012, 8:56 pm

Anyone else think this should be pinned to prevent future members making topics looking for someone to test their server ?

nelram - February 29, 2012, 9:08 pm

Yes, considering I just made a topic for that about 2 min before I saw this.

Thanks for the tutorial Purple Haze! Worked like a charm.

Lonely - March 4, 2012, 7:09 am

This is the perfect thread! I will be sending many people here that ask "Tezzzt installllss plzzzz" thanks again

pst291 - March 4, 2012, 9:09 am

Hi ,, im still having major problems ,,tested with anubis and it said exec crashed ,used bs and dark5 ,,some guy offered to teamveiw me and left me sitting for 3 hours like a twat on sat nite (yesterday) ,u seem to know what ur doing ,can u assist ?

Muchos thankos

TheBlackKnight - March 4, 2012, 8:02 pm

I myself needed test installs but was not feeling like to ask someone for that for days thanks dude you solved my problem, i rarely someones thread but this one really deserved it.. :)

Computer Forensics - March 5, 2012, 9:52 pm

fucking thanks this shit worked on dc rat now making fud and spreading tyvm bro i thought it would work testing the file onmyself guess doesn't work for every one/rat appreciate this man

gghitman - March 6, 2012, 12:53 am

it's very good for noobs it's good work good luck

alkal0id - March 6, 2012, 4:20 am

I don't get it. Can you explain more whats going on here. How does it tell you anything about what ports are forwarded? What does this site actually do?

Natas - March 6, 2012, 4:37 am

nice tut bro and thanks for sharing I have a good buddy with that I share my slaves with and we test are rats on each other but if he is ever not home I will do this and I liked the music to listen to while reading haha

technofreak - March 6, 2012, 4:43 am

yeah i always use this and sandboxie to check slaves

freeman13 - March 6, 2012, 2:26 pm

Are those people on ur Rat actual people?

I know the site is to test it out but are those ppl that come up in ur Rat actual reeal ones?

PS I done what you sid in ur Great tut, I get one person on my RAT but when the anylise thing finishes it disappears? why?

Sheldor777 - March 14, 2012, 5:22 pm

Ok so I've tesed my server over and over but I cant find what is wrong with it. All the settings I've gone over a few times and still don't know what is wrong because it doesn't show up when I test on Anubis it just said dead process. What is wrong?

<http://s18.postimage.org/asfrcefvb/isthis.jpg>

DrPhreezem - March 15, 2012, 9:53 am

Anubis is great and all, but if it only works with unencrypted servers, how are you supposed to know the server still works properly after encryption? Just a thought, because the crypter settings is where many of the connection problems lie.

Sheldor777 - March 15, 2012, 11:30 am

Still can't make it work on Anubis. Any suggestions?

Fennek - April 12, 2012, 3:40 pm

really nice tut

Thank you for the work

ImSutty - January 25, 2013, 6:47 am

This was very useful, thank you so much!

Procreate - March 1, 2013, 8:32 am

Hey I need some help

When I try to build my rat, it says this

{myIP} wont succesfully connect to port 1604

boldbirchtree - January 30, 2014, 7:40 pm

I have a server that connects to my no-ip address and works fine when it is run from my host machine. Port forwarding is setup (as it wouldn't be working on my host computer if it wasn't) but for some reason anubis does nothing. Has this stopped working or am I missing something?

unrecomsoftware - January 31, 2014, 4:53 am

Ok. It works with all files? Such as executable jar file?

-ZYMOTOM' - January 31, 2014, 4:55 am

...are you kidding me? You just basicly made a tutorial on how to upload a file. What the hell is up with hackforums lately.

Firenet - June 9, 2014, 5:38 am

Nice tutorial . Like to using it . thanks for sharing .
