Thread: [\[N00B\] How Do I Port Forward \[N00B\]](#)

Chubaca - February 15, 2012, 3:05 pm

I want to RAT but I need to Port Forward but I don't know how when I reach the part when I need to type in the username and password I don't know it. I have tried every thing from admin/admin blank even random numbers could some one help me. I'm using a Thomsom SpeedTouch that is sold by a company called DMAX. Please help me thanks in advanced.

DAT. - February 15, 2012, 3:09 pm

Use uTorrent.

There are many guides out there.

Chubaca - February 15, 2012, 3:35 pm

Could I please get a referral link of some what.

iNviZ - February 15, 2012, 3:58 pm

So your saying you cant get into your router yet? Try Admin and pw password. That is usually the default on many routers.

+Reckless - February 15, 2012, 4:10 pm

I would suggest using darkcommet RAT and No-Ip. Darkcommet has a very useful feature called UnPn forwarding. What this does is force your ports open when and ONLY when you are using the application. Most routers support this and it means you don't have to pf. Please PM me if you need assistance.

Thanks for the help; one Question what is the No-Ip For?

+Reckless - February 15, 2012, 4:20 pm

Um you must make an account then download the DUC there are plenty of youtube vids out there ;)

Snoopsy - February 15, 2012, 4:22 pm

I had the same problem portforwarding, but I simply searched how to portforward on my specific router and it gave me the default password. Have you tried admin/thompson?

Chubaca - February 15, 2012, 4:51 pm

Its just that my Router is not any normal Router its Puerto Rican and its harder to work with.

+Reckless - February 16, 2012, 12:18 am

That should be fine anyway. Pretty much all routers support UnPn forwarding.

Ghost.13 - February 16, 2012, 12:47 am

(Feb 16, 2012 01:18 AM)G?s?????k?s Wrote: [\[CITE\]](#) That should be fine anyway. Pretty much all routers support UPnP forwarding.

But some routers have UPnP settings off as default.

OP, try to Google your router for the default username. Usually, they are the ff:

-admin/admin

-admin/12345

-admin/password

-admin/(blank)

If none of them worked, try to listen to the ports if you're using DC, so you would know if UPnP is working. If it is, then you're good. If it's not, then you really need to get into your router.

Good luck.

King of the South - February 16, 2012, 1:50 am

Port forwarding on your router might cause u a wasting of time, because it's not all the ISP (Internet Service Provider) does allow that. Your ISP might be blocking u from performing the operation. so the best way to port forward is to use vpn. VPN is easier and faster if u want to advance further.

Use VPN and u will surely port forward.

Chubaca - February 16, 2012, 2:00 am

@G?s?????k?s It supports it. But I just need my Password and Username.

@Ghost.13 I have tried using those Username/Passwords and they did not work.

King of the South - February 16, 2012, 2:10 am

Read my first response. Your ISP might be blocking u from port forwarding on your router. so the easiest and fastest way is to buy VPN with port forward feature and this will surely solve your port forwarding problem.

-?Divine- - February 16, 2012, 5:07 am

I can do it for you mate. Shoot me a PM with your Team Viewer info.

Chubaca - February 16, 2012, 2:06 pm

I Port Forwarded now going to wait for my Friends #Foxy to get on so he could help me with the rest.

King of the South - February 18, 2012, 4:02 am

Improvement! I am happy to hear that from U. Good Luck to U!
