Thread: [\[Scammer Alert\] Attempted Scammer Alert \[Scammer Alert\]](#)

Mauler - February 17, 2012, 7:07 pm

Ok just going to make this quick.

I don't think this should be in the marketplace because I haven't been scammed, I'm just warning of this guy <https://hackforums.net/member.php?action=profile&uid=786569> and <https://hackforums.net/member.php?action=profile&uid=831839>

Ok so he is selling this booter <https://hackforums.net/showthread.php?tid=2219624> and he is claiming it puts out 1.8 gb/s on a single shared VPS. I asked him to proof it and he called me a L337 H4X0R and told me to STFU.

So he basically is false advertising and is scamming no brained people.

Other scams: <https://hackforums.net/showthread.php?tid=1554282&highlight=uid%3D786569>

(He tried selling shells off one VPS. e.g. 20 shells on 1 VPS).

EDIT: We are talking on skype. He failed to take santrex.net down with one booter then opened up another one. He couldn't keep eTrade.com down either. Here is him trying to take down eTrade

He wont use join.me or Team Viewer to prove he is using 1 booter as-well. I hate scammers.

Just found out he is using hosthatch.com I found this by a whois search on his servers IP. This kid is dumb, reall dumb.

Mauler - February 17, 2012, 7:11 pm

Are you denying that your booter outputs 1.8 gb/s?

Hidden™ - February 17, 2012, 7:11 pm

You should have a site administrator look into this for you rather than posting a random report. Also, some pictures of the chat or personal messages between you two would be helpful.

Mountain Dew - February 17, 2012, 7:11 pm

The server has a 2 gbps uplink soooo he doesn't have any clue what he is talking about. and he also just said that a 10gbps dedi line couldnt pull 1.8 gbps HAHAHA this scam report is false and a fail

Exactly, he has nothing. A 2GB/S SERVER WILL NOT PUT OUT 2GB/S. ITS GOING TO HIT AROUND 1.8GB/S. YOU ARE A FUCKING RETARD.

I can almost guarentee that your booter does not hit 1.8 GB/s

If you want to list your booters power then you must provide proof. Simple as that

Thanks for letting us all know you can't even put out 100 mbps. If this was a dedicated server I'm sure you could smash it down with 1.8 gb/s.

Mountain Dew - February 17, 2012, 9:17 pm

Mhm, If it was yours you would have seen i sent a small volly with small packets, So thank you, But as I can see in your rep, you like to troll when you know someone is better
lol I hit it with my 1 gbps , btw and, and why would it being a dedi make it easier to hit?

all i need is you going and reporting it to my host, I will get a trustes member to test it tomorrow for you

You can easily just hit my server and then we know you can at least output 100 mbps. I know you didn't put smaller packets, you went all out and put 65500 and couldn't take it down. Face this wont end until you admit you are lying about your output. It's only going to get worse for you.

Or i can get proof from a member who has more brains then a 10 y/o troll. All your bitch ass is going to do is go and do a tracert, grab my hosting and report the IP

You continue to prove your ignorance, You can go at it all day, as you see I answer all your questions, you have nothing to prove yourself right, and your lack of server knowledge is easy to see. thank you for the decent server site

I don't give a shit about your hosting, all I'm asking is to prove your output. You couldn't take down my server and now your getting mad and calling me 10? I'm 16 in a week and have 15x the knowledge you do.

Mountain Dew - February 17, 2012, 9:37 pm

Well you don't act like it, nor are you proving it. Since as I stated a short time (15 sec) attack with low packet size (5000) to take a look at if you even knew how to look at attacks, which you don't. And your also younger than me still, and next to NO knowledge of servers. Putting a script on a server and changing the Chmod with youtube doesn't make you a pro at servers. so have fun with you booter which has hardly any attention

Sorry I don't use <http://www.downforeveryoneorjustme.com/>, 5000 packets and 15 seconds would still have smashed my server you moronic idiot. "Putting a script on a server and changing the Chmod with youtube" exactly all you can do. I'm fine with my booter sales tbh, my booter isn't abused so it's great for my customers, I have a booter as a fun thing not because I'm after money.

Everyone get ready for the new video going up on youtube tomorrow I will post it here and on his thread.
