Thread: [How to know if I'm getting DoSed?](#)

bfreakz - February 21, 2012, 5:17 pm

Basically, during the day my internet would "fuck-up" making it impossible to browse, game or anything (bings go to 8k-10k)

I'm just interested in knowing if it's possible to find out if I am being DoSed so I could simply call my ISP and tell them to change my IP.

Low - February 21, 2012, 5:45 pm

Um,

1. Check your router logs.
2. You can change your IP by changing your Mac address on your router.

If you need help, google it. If you still need help, shoot me a PM and I will try to help you out.

bfreakz - February 21, 2012, 5:47 pm

There are no logs in my router for any type of flooding, and I can't change my IP by changing my MAC because my ISP binds the IPs to the MAC address

Low - February 21, 2012, 5:49 pm

Then, I doubt it is a DoS. You could call your ISP to get it changed and see if you see any improvements. If it still happens, call out your ISP to your house to check it out,

bfreakz - February 21, 2012, 5:50 pm

I mean, my router doesn't log them. It can still be a DoS/DDoS

mDopeyk - February 21, 2012, 5:50 pm

Would someone have a reason to DoS you? If not then I doubt it's that, maybe it's just your internet, I would say try calling your ISP.

Johnny Ramone - February 21, 2012, 5:50 pm

You could be ratted and you might be part of their botnet.

umami smokes shisha - February 21, 2012, 5:51 pm

I would try unplugging your router over night to reset everything
or
Change ISP's if you don't like your providers services

bfreakz - February 21, 2012, 5:52 pm

Yes people would have a reason to DoS/DDoS me because I DDoS myself.

I am definitely sure that I'm not ratted.

And I'm pretty satisfied with my ISP's and I'm sure that unplugging my router won't reset anything.

Low - February 21, 2012, 5:55 pm

Make sure all of your connections to your router and modem are clean and secure. If it continues,

call your ISP.

Johnny Ramone - *February 21, 2012, 6:01 pm*

Oh, try this. Go to cmd, type ipconfig /release. Then type ipconfig /renew. That might help.

Entitled - *February 21, 2012, 6:15 pm*

You should see hackforums say " Your router is messed up".

Eric21 - *March 27, 2012, 9:16 pm*

First of all check whether all the connections to your router and modem are correct, and also make sure its clean.If no use of this things then you could call your Internet Service Provider and report about it.
