Thread: [GameCP No License Linux](#)

Tankey - February 22, 2012, 12:59 pm

Hello,

I am using SwiftPanel for quite a while now, and it does not have many features.

Now I am after GameCP for some time already, and wondering if it is possible to crack it somehow? I find 15USD per month quite expensive, as I am not a gamehost or smth. So, I'd like to ask if someone has succeed in this or willing to do this? The file(s) have been decoded with ioncube, and I like to have a lifetime license for GameCPX (www.gamecpX.com).

Seeing forward on a reply.

Kindest Regards,
Me.

I ran a quick scan to see what was there and didn't find much. My guess is your shit out of luck man.

Tankey - February 22, 2012, 1:56 pm

Ohww.. That's a shame..

Well thanks for your spare time atleast! I really appreciate it!

Hello,

I am able to read and modify a php file/script. However i need help with decoding the files which are protected by ioncube, so if someone is able to help me with this,, would be awesome..!

Thanks,
Hello,

We decided to put some more action behind this and therefore we pay \$50 for the one who is able to provide us a lifetime license which checks for updates though.

Pledging with \$50 as well.

GameCP sounds like a lot of use, but as I have only few personal gameservers, paying extra \$15/month is a no-go.

I can decode the IonCube files and null it, if you have the original files. Message me if you need it.
