Thread: [\[TuT\] How to create a torrent & seed it correctly \[TuT\]](#)

ToLeGiT - January 5, 2010, 2:09 pm

In this tutorial I will be showing you how to create & seed a torrent correctly for your keylogger/RAT whatever it may be.

First of all you need to download a torrent client.

I would suggest using uTorrent because it's easy to use.

You can download uTorrent from here: <http://utorrent.com>

After you install uTorrent open it up go up to the left hand corner of uTorrent and click file > create new torrent

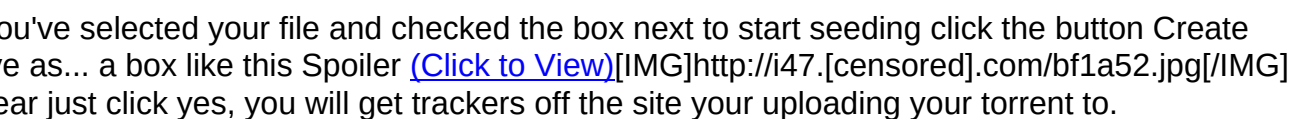

Spoiler [\(Click to View\)](#)

Once you click create new torrent click Add File

Spoiler [\(Click to View\)](#)

After clicking Add File search your file you want to make a torrent for example I'll use ThreatExpert Application (make sure you check the box next to start seeding before you click Create and Save as

Spoiler [\(Click to View\)](#)

Once you've selected your file and checked the box next to start seeding click the button Create and Save as... a box like this Spoiler [\(Click to View\)](#) will appear just click yes, you will get trackers off the site your uploading your torrent to.

Once you've click yes it will then make your file you selected a .torrent file you then save it somewhere as shown in the picture below.

Spoiler [\(Click to View\)](#)

Here is what the .torrent file will look like after you create it.

Spoiler [\(Click to View\)](#)

Congratulations you've now created your .torrent file to upload to torrent sites.

Now for the seeding part to seed your torrent file.

Upload your .torrent file to a site like <http://torrents.sumotorrent.com/upload.php>

Click browse find the .torrent file that you just made select the category's, choose a name for your torrent, write in a description something persuading, then click upload.

After doing that then the torrent site will automatically redirect you to your torrent you just uploaded, download it. (open with uTorrent by default)

Right click on the torrent file in uTorrent and click properties in properties near the bottom select initial seeding.

Spoiler [\(Click to View\)](#)

After doing that... right click on your torrent file in uTorrent again and select the option Force Start

It will then Force Start and Initially Seed your file...

Spoiler [\(Click to View\)](#)

Once you've uploaded your file to one torrent site... upload it to different torrent sites to get better results of spreading your file.

Sorry if this looks like shit.... this is my first tutorial.

Bump for people who don't know how to make a torrent.

Weather Man - January 6, 2010, 12:28 pm

I never knew how to seed a torrent before, I never needed to :p. Thanks for telling a noob how to create and seed a torrent!

gandy3451 - January 6, 2010, 6:06 pm

is torrent suppose to be a good way to get bot because i never used this way but evryone tell me

good about it

ShadowElliot - January 6, 2010, 9:32 pm

Thanks for letting me know on how to seed a torrent!

I always wondered how to and now I know, nice pics for a tut.

mechanic33 - January 9, 2010, 3:18 am

Nice Tut epicwin will give this a try I already knew how to make make torrent but still nice Tut

Haha ? never be afraid to ask any questions, it's how you learn and yeah some people might flame... but just ignore the flame and focus on the people that aren't flaming.

J3b47_g1l4 - January 10, 2010, 2:18 pm

thanx epic! ur tha guy! yeah,i was afraid to be flame. i'm newbie. lots of thing to learn. i came across this TUT to see how to make a torrent to spread my server. n i see ur a RAT,so mayb u can help me in the process? wasnt ask u to spread 'em. juz to gimme sum tips on spreading n making it FUD. looking way to make 'em runtime FUD now. and i preferred to do it manually. so i know how its done. well,thats how to learn rite?

sm3rkz - January 10, 2010, 2:21 pm

HAHAHA i have been acutaly trying to find a way to do this, i cam to the write place, thanks dude.

???? - January 10, 2010, 3:13 pm

Initial seeding isnt the best idea because it REALLY limits the speed that you upload, I find it better to leave it unchecked.

J3b47_g1l4 - January 10, 2010, 5:28 pm

but we can adjust the upload speed right sir?

J3b47_g1l4 - January 10, 2010, 7:57 pm

<http://www.seedpeer.com/details/2799036/Myspace-Private-Profile-Viewer.html>

i've upload a torrent,but not to sumotorrent. its seedpeer. but it seems not to be working. can sumone be gracious enough to download that torrent but not to run it. juz to test if my torrent works. TQ

****INFECTED!! DO NOT RUN!!**
