Hydra - February 27, 2012, 5:04 pm

CHECK OUT MY OTHER GIVEAWAY HERE: <https://hackforums.net/showthread.php?tid=2276279>

No .exe's just the Modded PHP uploaded on Mediafire in a .rar

I was impressed that many of you don't have a Copy of the Modded PHP for the iStealer 6.3 LEGENDS, So I've decided to give this out to all of you.

No need for a Virus Scan.. Last time I checked... AV's don't scan PHP's, Images's and SQL's and JScript's... NO .EXE, This only contains the Modded PHP, Not the program. Program is free and in the public.. Use Google or the Search Feature on HackForums.

iStealer 6.3 Legends was my favorite "RAT/Stealer" back in 2010 when I was BlackHat...

So yes people still do. There hasn't been an Update but nothing is wrong with it...

I don't know, I haven't used istealer since 2010, I don't do anymore BH, hacking.. And I'm not supplying you with the program, just a pack of Modded PHP's.

Teenage Anarchist - February 29, 2012, 4:54 am

thanks ihydra,now i just going to try to infect people combining istelar and backtrack

Hydra - February 29, 2012, 5:05 am

Sent! Enjoy!

btw, Let me know if there is any trouble. I think if you mess with the lognum.txt it fucks up the whole thing, Make sure there is a 0 inside without any spaces when you start.

Let me know if there is any problems, I had one PM so far saying that the lognum.txt was Unreadable. Make sure there is a 0 inside and you don't change the name of it UNLESS you change it in the PHP files.

iStealer 6.3 Legends makes the Server, Im not giving you that program but the Modded PHP. iStealer is similar to RATs but no need for Port Fowarding,etc. all it does is steal pw's and is pretty much a keylogger.

Thats the GFX Side, yes, and then inside the PHPs I've changed up some of the things too so your Host cannot find out that you have a Illegal "Site" on their servers. I've made it look like a "School" site.
