Thread: [Need some help on array character sizes](#)

prohax0r - February 29, 2012, 6:57 am

Hi guys I'm stuck on a question on my java worksheet

Quote:5. Write a Java program to do the following:

- Declare an array of characters of size 26
- Use a for loop Fill the array with all the characters of the alphabet

I'm don't know how to go about setting the size of characters and am having trouble understanding the question kind of, can anyone help me out here? WOuld be much appreciated

As far as I know, arrays must have fixed size, so when you declare a new array you should specify the size of that array, and in this case you must declare an array of the size 26.

I think it goes somewhat like this :

Code `char[] myArray = new char[26];`

About the second point. Well, I know how to use a loop but I just don't know yet how to make it assign the Alphabet letters one by one as elements of myArray, so I hope someone else in here can help you with that :)

Good Luck

EDIT :

Well, after a little search in Google, I managed to come up with this :

Code `public static void main(String[] args) {`

```
char[] myArray = new char[26];
char c = 'a';
for( int i = 0; i < 26 ; i++){
    System.out.println(c);
    myArray[i] = c++;
}

}
```

I hope this helps :)
