Thread: [///// \[HOW TO SETUP A RAT VIA CYBERGATE \] ///// \[TUTORIAL IS PICTURE GUIDED \]](#)
[/////](#)

©©©© - February 29, 2012, 12:25 pm

Hello Guys + Gals ?

CYBERGATE RAT

In this tutorial i will be showing you how to:

- Set up your 'No-IP'
- Set up cyberGate
- Build your CyberGate server
- Port Forwarding

I'm sure there's plenty of tutorials about this, however im trying to simplify and make mine more easily understandable.

Okay here we go;

Step One: Setting up a 'No-IP' Account

1: Go to <http://www.No-ip.com>

2: Create an account, log in and then press 'Add Host'

3: Now name your host to whatever you want. For example I will name my host xzxmikedxzx.no-ip.biz. Just follow these settings then press Create Host.

[img]<http://img188.imageshack.us/img188/5374/26790935.jpg>[img]

4: Now go here - <https://www.no-ip.com/downloads.php> and download No-IP's Dynamic DNS Update Client,

5: Once downloaded, install it. Then open it up and put in your account name and password. Then it should update, after it does check the box next to your no-ip host.

It should look something like this:

[img]<http://img69.imageshack.us/img69/7596/newlcl.jpg>[img]

You are now finished setting up No-IP!

Step Two: Setting Up CyberGate

1: Download CyberGate and open it. You can find the download in Cyber-Sec's forum, which you need at least 5 posts to obtain - <http://www.cyber-sec.org/forum/> or you can download it here - <http://www.mediafire.com/?mmwwnj5ofzz>

2: Now click Control Center - Start

3: Click Control Center - Options - Select Listening Ports And Do Following:

[img]<http://img189.imageshack.us/img189/5902/32695328.jpg>[/img]

You are now done with setting up CyberGate!

Step Three: Building Your CyberGate Server

1: Click Control Center - Builder - Create Server. Make a user named Hacker and press Ok.

[img]<http://img192.imageshack.us/img192/7213/79780787.jpg>[/img]

2: Mark the user "Hacker" And press Forward.

3: Press 127.0.0.1 | Port 999 and press Delete:

[img]<http://img192.imageshack.us/img192/9475/61496758.jpg>[/img]

4: After that, Click Add.

5: A Box should pop up saying: 127.0.0.1:81. Remove everything and change it with the No-ip address host you added. So let's say you used example.no-ip.biz. Change 127.0.0.1:81 to example.no-ip.biz:82. So it should look like this:

[img]<http://img687.imageshack.us/img687/3674/79540144.jpg>[/img]

6: Now Change the
Identification: remote
Password: cybergate

To This:
Identification: Cyber
Password: 123456

7: Go to the next tab "Installation"

8: Use the Exact same settings as i do:

[img]<http://img535.imageshack.us/img535/5140/newn.jpg>[/img]

Important Info:

Most people set the Installation Directory as System. I talked to jonhyk (the creator of cybergate) and he advised not to do this when using UAC bypass (which you want on). This is because, from jonhyk himself, "cybergate is not able to write into protected folders if UAC is enabled". I also don't use Winlogon.exe for the File Name because Windows Defender catches cybergate if you do so. So it is best using my settings as shown above.

9: Now Skip the Message, Keylogger, and Anti Debug tabs, since these are already set up right for us.

10: In The Build Server have the exact same settings checked as I do.

Except Google Chrome Passwords is optional. If you would like to have it checked like I do, go to <http://www.110mb.com> and create an account. Then log in to your account and go to file manager. Then click upload and upload sqlite3.dll (it is located in the same folder cybergate is located on your computer). Then once you check Google Chrome Passwords on Cybergate it will ask for a link, put in <http://www.username.110mb.com/sqlite3.dll>

[img]http://img85.imageshack.us/img85/955/21251752.jpg[/img]

11: Press Create Server and save the settings.

You are now done creating you server! (RAT)

Step Four: Forwarding Your Ports

Your now going to have to forward port 82 on your router if you have not done so, this is how:

1: Click Start on your computer and click Run. If you have Vista and I think Windows 7, you need to search Run in the search bar in the start menu, then click Run.

2. Type cmd and hit enter.

3. type ipconfig and press enter.

4. You should see something like this, write down or remember these last digits that I selected in the picture below:

[img]http://img341.imageshack.us/img341/2904/newa.jpg[/img]

5. Now go to <http://www.portforward.com>

6. Scroll down and select your router.

7. Scroll down and you should see a bunch of programs, click "1st SMTP Server"

8. You should see at the top telling you to enter your static IP

[img]http://img444.imageshack.us/img444/5174/newzi.jpg[/img]

9: Type in the digits I had you remember in step 4. My digits were 114 so I entered that.

10. Now just follow the tutorial, but when it says forward port 25, forward port 82 instead.

11. Once you are done, go to <http://www.canyouseeme.org>

12. Type in 82 in the box next to "What Port?" and click check.

13. If you got "Error: I could not see your service on IP ADDRESS HERE on port (82) Reason: Connection refused" Make sure your firewall is off and try again.

14. You should get "Success: I can see your service on ADDRESS HERE on port (82) Your ISP is not blocking port 82"

Port 82 should now be open! ?

You Will Now Need To Crypt Your server To Make It FUD:

Search forums on how to do this - Hope you enjoyed and understood

Feel free to PM me over any issues.
I will try and get back to you ASAP

HAD OVER 1000 VIEWS -- KEEP THE FEEDBACK ROLLING =P

NOW FOR THE MOST IMPORTANT BIT [READ]

THIS THREAD TOOK 3 HOURS OF MY TIME AND PATIENCE TO MAKE

IT WOULD ONLY TAKE YOU 1 MINUIT TO POST THANKYOU

APRECIATED ???

SpiffSpiffy - February 29, 2012, 1:20 pm

Thank you mate. I appreciate the tutorial.

©©©© - February 29, 2012, 1:57 pm

no problem pall. take time to vote also people x

Pixelstealer - February 29, 2012, 2:17 pm

Good tutorial =) Advice : tell them how to use a crypter

-Pixelstealer

©©©© - February 29, 2012, 2:37 pm

yeh i might add abit to the post later this week about cyrpting your server

Phenoms - February 29, 2012, 6:16 pm

It is very detailed & helps noobs (like me) out alot!

©©©© - March 3, 2012, 4:16 pm

Re ig this thread - hope you like it guys

?BIG Punisher™ - March 4, 2012, 6:26 am

Appreciate the tutorial mate, thanks!! :)

yaserkalair - March 4, 2012, 6:31 am

Wait but how do I infect some one?>

Computer Forensics - March 5, 2012, 2:38 pm

thanks worked very well now how do I get slaves just send server?>

Toinregaoith - March 6, 2012, 11:19 pm

Yeah but make sure your server is cripted!!

©©©© - March 8, 2012, 12:08 pm

Yes now you have to do a few things

- Bind the server (optional) - this makes the victim see some legitmant content in the download, therefore isn't wary about it.

- Incrypt the server - This makes it impossible for allot of anti viruses to detect ur RAT when opening your file for download

- Spread the server - this is the art of getting people to infect their computer with your RAT

Cheers

Pm for more help - no teamviewer atm, Im busiy

shoelessjoe - March 8, 2012, 3:58 pm

Wow this is perfect! Thanks so much for this.

MaddyCumOnPatrick - March 8, 2012, 8:52 pm

Nice tutorial man ! Help me so much ^^ good sharing

©©©© - March 14, 2012, 4:05 pm

Just ing the thread, hope you found this usefull, and thanks for positive replies x

KevinAdams1796 - March 15, 2012, 6:18 pm

thank you very much man! :) trying it now

Guppypid - March 15, 2012, 7:39 pm

Oh great, this tutorial is very comprehensive, thanks

themella - April 18, 2012, 6:52 am

perfect man! your tutorial is fantastic
thanks a lot man!

Huttey™ - April 18, 2012, 8:35 am

Thank you mate. Realy amazing tutorial.

BaSingShe - May 17, 2012, 12:58 pm

What if I am on a dedi server with no knowledge of router and static IP? What if I set port to 80?

SIM-111414 - May 17, 2012, 1:06 pm

Nice tut bro..

Thanks for sharing.

But I will suggest to also mention crypters if you want it to be live for more time.

Chewd - May 30, 2012, 4:51 pm

Hey, I used this tutorial and it worked! Thanks man! (:

Stankovic - May 31, 2012, 7:30 am

mate on portforward.com i can't find my router, but in my Router settings can i portforward to. But what i need to put here for open port 82:

[img]<http://img214.imageshack.us/img214/6462/naamloostvg.jpg>[/img]

JannelFL - May 31, 2012, 8:49 am

thanks a lot for tutorial, I'll try it later!

prdx - May 31, 2012, 10:27 am

Basic TUT detailed thank you for this dude

©©©© - September 24, 2012, 11:56 am

Here there once again people though i would add to this thread and reboot it to the top enjoy. and hope it solve's some of your quieries :)

Im offering Tv assistance in the following:

- Rat setup
- PortForwarding
- binding
- Free crypting of me
- Advice on spreading

Feel free to contact me.

Weve now had over 1000 views on this thread. only 20 odd replies.

I Hugely apreciate feedback from you wonderfull people. =P

Blue Art - September 24, 2012, 1:39 pm

Omg Thankyou man!!

i was pissing around for ages, but after i saw this, i saw the light !!

Cheers :)

got my vouch

©©©© - September 24, 2012, 3:39 pm

reing this thread hope u all find it usefull

Ghettoking - September 24, 2012, 3:41 pm

This looks great, I will Look at this very soon again. Thanks! (:

arabiansquid - September 24, 2012, 3:56 pm

Still can't find port 82? Firewall's off done everything right..

DeathSh0t18 - September 24, 2012, 7:53 pm

My search for a good tutorial has stopped. Thanks!

gamerjuicehd1 - September 24, 2012, 10:44 pm

Thx so much im pming u now!! It really Helps

©©©© - September 25, 2012, 11:07 am

Glad you all found it usefull

Leave me feedback on anything you found not so clear and i can change the thread to suite :)

Also if in need of any asistance via Tv in order to portforward ect...

Pm me asking for help .

©

spiruleta - September 28, 2012, 11:00 pm

It is very detailed thank you man...i will try it

mrdaniel - March 14, 2013, 9:39 am

Thank you, very nicely made and clear.

royjoy16 - March 14, 2013, 11:49 am

are there benefits of using cybergate instead of Darkcomet?

©©©© - March 27, 2013, 1:58 pm

Still up and running, enjoy and please leave feedback x

Faddy - March 27, 2013, 2:05 pm

Appreciate the tutorial bro. :) Keep it up. ?

Bewbs - March 27, 2013, 2:29 pm

Awww 3 hours so long? :D

Thank you xD

thebestofthebest - March 27, 2013, 2:53 pm

very detailed tutorial i like this thanks man.

Madara-Uchiha - March 27, 2013, 3:55 pm

That's a very detailed and well explained tutorial. Very good work! Thank you ?

©©©© - March 28, 2013, 9:42 am

Cheers for the feedback.

Give me a shout if you run into any problems.

CayFai - March 28, 2013, 1:02 pm

Im at the build a server part, and it says have the same settings at me but the picture wont load/exist so i dont know what settings to have ticked/unticked, can you help me with that? on beforehand thanks.

©©©© - March 29, 2013, 11:50 am

Glad you found it usefull, need help? pm me or post here

AnonRedVenom - October 27, 2013, 2:23 pm

need help with step 4 the picture is missing

drewkasp - October 29, 2013, 1:41 am

Do you have any idea how to configure the reverse proxy on CG?
