Thread: [\[Tools\] Security Pack V1.0.0 \[Tools\] \[Free\]](#)

JavaSun - March 1, 2012, 5:24 am

Security Pack

What does it include?

A virtual keyboard, a password generator, a program to open boot configuration, a hash generator, and a recommendation file.

Virtual keyboard.

The virtual keyboard is for when you're keylogged. Obviously you want to get rid of your keylogger but that's not what this is for. This virtual keyboard tool is used to type things out when you're keylogged. Let's say, you want to send your friend a message but you don't want the person that checks your key history to find it out. The virtual keyboard has a ton of keys that you can use, and when you're done you simply copy the output field and paste the text wherever you want. No key press history, because no keys were pressed!

Password generator.

Have you ever had the feeling that your password is unsafe? Well chances are, it is unsafe. A lot of people tend to use passwords like 1234 or lol. This is obviously very insecure. The password generator supports a lot of options, from lowercase letters and symbols to patterns and being able to select the password's length. No more getting hacked for you!

Boot configuration.

This file is simply a bat file with one line. It's just used to access the boot configuration quickly. In this menu you can change programs that start up when Windows loads. If you find suspicious programs in the list, you can uncheck the boxes. In this menu you can also choose to restart your computer in safe mode.

Hash generator.

Hashes are quite advanced. If you don't know what they are I suggest you look up a tutorial or don't use this program. What this program is capable of is simple: it supports hashing your strings with the following algorithms: md5, sha-1, sha-256, sha-384 and sha-512. You can use this to quickly hash something, even if you have no programming knowledge or access to the internet.

Recommendation file.

This is a text file. It states what programs I recommend for finding viruses, scanning files and a lot more. Nothing more can be found in here, but I do strongly encourage you to check it out.

What operating systems does this support?

Windows.

What coding language is used to code these programs?

C#.

Are you adding more programs?

If you have any ideas for programs to add to the list, I will. Whenever I get ideas I will add programs aswell. The current version is V1.0.0.

How do I understand the version?

I use my own way to make the versions. The first number after 'V' stands for how many programs are added since version 1. The other numbers are simply used for bug updates and/or patches.

Why would I download this pack?

It can never harm. It's always recommended to change your password once in a while and when you're keylogged you might need the virtual keyboard. Even if you have no internet connection, you can use these programs once downloaded.

Who made these programs?

I personally made each of the programs. [Truxer](#) made the image that you can see in almost every program and at the top of this thread. He's a great graphics artist.

Why did you make these programs?

Because I get bored sometimes.

Where do I download the pack?

[Here.](#)
