pacman90 - March 1, 2012, 9:03 am

I wanted to do this since ages, but was a bit lazy.. First of all, a link to his sales thread:

<https://hackforums.net/showthread.php?tid=1764868>

Looks great, doesn't it?. Seems like there aren't any problems with the crypter, but thats just cause he insta reports complaints from his customers and the staff deletes them.

Just check his profile..

<https://hackforums.net/member.php?action=profile&uid=744040>

456 reported posts and I bet 99% of them are complaints in his thread.

Then you'll get a PM from ASM in which he tries to force you to never complain again, or you will get banned.

Example post from me which got deleted:

<http://imageshack.us/f/267/icryptg.png/>

And a PM conversation right after I posted:

<http://img809.imageshack.us/img809/4792/iscam1.png>

I obv accepted the refund:

<http://imageshack.us/f/51/iscam2.png/>

But seems like he didnt expect me to really want one :D

<http://imageshack.us/f/405/iscam3.png/>

Then he wanted to show me which settings (settings? this crypter doesnt have any settings lol) to use via tv, I sent him my tv pw and then he just went offline. Since then I haven't heard anything from them. Guess he thought Ill just forget about it sometime.. Wrong!

Here are some scans of the "newest" stubs which I just downloaded:

They always claim that every customer gets unique stubs, but I really think that everyone just gets the same ones..

If anyone wants to compare the latest stubs, just shoot me a pm so we can prove it.

I realise that my license will get banned for this dispute and Ill get repfucked by his friends, but I really dont care since its just a useless product anyway..

Thanks for reading!

Mr. RawrGasm - March 1, 2012, 9:11 am

This seems like a legit report. I have seen people leaning more towards n0\$crypter more then icrypt and this may be the reason. BTW, save your screenshots as a .png and the image quality will be a lot better. i can't read the first screenshot :p

Reptar - March 1, 2012, 9:43 am

Wow, he was being a total dick in that message:

ASM Wrote:You are an idiot

3. Get banned without a refund.

You got all of that from asking for help? Then a refund? Since he was so aggressive i think im siding with you unless he can prove otherwise that you're wrong

I didnt really ask for help. All I did was posting in his thread (see 1st screenshot)

Edit:

@Rtd-Shadow

Could you please upload a scan from your latest stubs? If you dont have an account on a scansite, you could just pm me a dl link to your stub and Ill scan it.

Thanks.

Hexxus - March 1, 2012, 9:56 am

Hey man, thank you for posting this and saving me 50\$, I was about to buy this to. It seems he gets upset if people write honest reviews on his thread. People that are planing to buy the product have the right to know how others that have used it feel.

Kyle FYI™ - March 1, 2012, 9:59 am

Just be happy lowkey isn't selling it anymore, he was a prick. I paid for the crypter couldn't even login for 2 days the next day he bans my account and says "You where doing a crypting service". I couldn't even login, he charged me \$25 to be unbanned and then he never unbanned me.

agreed. I got the threat yesterday when i complained about iCrypt NEVER BEING FUD!

Cant say anything else or ill get banned. People.. go another route.. knowing what I know now I wouldn't pay \$5 much less \$50.

Edit: my post on the thread was deleted too btw. Hiding complaints so he gets max profit.

PoisonKnife - March 1, 2012, 10:24 am

I bought the whole pack some time ago from ASM, crypter, stealer etc. and at first the crypter worked fine, but it was soon UD and then the fun began (the same fun you went through).

I have never meet such an aggressive person before. Jesus!

lorax81 - March 1, 2012, 10:28 am

I got POE stealer package.. have never been able to get it to execute on a remote computer, get constant errors.. he wont help, just gives a one line answer saying its my fault and i don't know what im doing. Great customer service, until after you pay.

+Awesome - March 1, 2012, 10:33 am

In that case, he should be the one to get banned.

Jiame - March 1, 2012, 10:37 am

vouch for pacman. it sucks that you can't post the truth in the sales thread because you get gang repped and warned for "sales trashing" and your post gets deleted. HF does a really good job at censoring the truth. When i use icrypt it will turn a clean file into 20/37 within a few days. you're better off just not encrypting anything with icrypt.

lorax81 - March 1, 2012, 10:42 am

its funny that you just posted today and its already 3 pages. The proof is in the pudding id say!

Super Scumbag - March 1, 2012, 10:45 am

I used to have iCrypt.

I support this thread, and give props to Pacman.

iCrypt can't stay fud for more than a few hours, and when it does, its only because it was fud for 3.

There are ways to get them to stay fud for a bit longer, but nothing that improves the quality of the product enough.

As far as posting feedback in a sales thread, saying the item is shit, or giving out trade secrets/source code, is one thing.

Giving feedback legitimately, including your experience is another.

I havn't seen a member post that iCrypt is shit without backing it up.

And let me tell you, iCrypt IS shit.

The last time somebody stood up against a product this big more than a year ago, I think on October 15, 2009. It was by Vorfin. Only then did the other customers stated their long-kept frustration. I am not saying that something that revolutionary is about to take place. It is just that I hope light is shed into this matter. I have read the sales thread in question for quite some time and I believe I saw vouches and good feedback from other customers who have just bought it. I work for another crypter therefore do not misjudge me as being on iCrypt's side. ? Perhaps you should inquire those who provided such good reviews? You might learn more as to why they are satisfied. Anyway, kudos for posting.

He offers " presents " (extra stubs) to people who give positive feed back. So more than likely, they buy the crypter, give positive feedback then get screwed on the stub... but they cant say anything or they will be banned from the crypter they just bought. ITS SUCH A SCAM!!

You should have bought CrypteX Advanced, then, since you are a previous customer. ? There are several things that cause ppl to say its good:

- They just bought it. ASM promises you a gift if you vouch in the sales thread (I never got one)
- They got no clue
- They scan their files on novirusthanks.org, as suggested by ASM (it only uses 9 scanners, so they think their files are FUD if its 0/9)
- ASM gave them support, like changing the HWID. He asks you for a vouch after "helping" you.
- They just dont wanna lose their license cause 50\$ is lots of money for them
- He probably got multiple accounts, but I cant prove that.
- Friends of him posting, who probably never bought it. Cant prove that either.

Virus1x Wrote:however all stubs have to SHARE some sort of code. be a few strings to a few hundred string, I believe if I recall correctly all our stubs are 10-20% similar. meaning your stubs are 80-90% unique

Firstly, If they're not crypting all of the strings with a "Polymorphic encryption", then I see no reason why they should even be selling the crypter.

Secondly, I'm about 90% sure that anti-viruses won't detect specific parts of the code SOLELY on a string, that's just silly.

Thirdly, OMC is a good coder, and I could see why that if he's using re-occurring code it might get detected, but if he's got a customer base >100, that means that each stub would need 100 different methods of doing the same thing, for each thing. OR it would need to be polymorphic/metamorphic, which I don't believe is possible in vb6, but I could be wrong.

????CK345? - March 2, 2012, 10:24 am

Also on with Pacman has said, with the friends "vouching", I noticed that first with Vandium's stealer. Also this was when you could rate threads, it had a 5 star thread and a bunch of "vouches" mainly from friends. The stealer turned out to have a bunch of bugs and didn't work, dude releases an "update" but it's a backdoor that removes my taskmanager, and eventually closes the thread. I think me and my buddy were the only two to actually buy it. Fortunetly I think his account was banned or closed.

The point I'm trying to get is a lot of these threads in the premium section are shady as hell, because all of these friend vouches and the "clean up" of threads is pretty ridiculousness now. There needs to be rules in place in that and all over selling sections.

Kevin?? - March 2, 2012, 10:40 am

I was a bit disappointed. According to the sales thread when I purchased it, Icrypt had a guarantee of crypting all bots to date. Since it was able to crypt all servers according to the thread, I purchased it and attempted to crypt Insomnia. Found out shortly afterwards that Icrypt couldn't crypt Insomnia and I'd only get a fraction of the price if I were to refund.

I AGREE!! HF should really do something about that. Its not fair to buyers to be screwed out of money via false advertisement and TRUTH HIDING!

When I first bought it like 6 months ago, it was actually FUD for quite some time, recently once I got back into blackhating and went through the troubles of getting iCrypt and HWID, I discovered how shitty it has became. It's like 5/37 within MINUTES of a stub release.

iCrypt is a big scam hope everyone sees this and doesn't buy this instead they buy CrypteX Advanced

flAmingw0rm - March 3, 2012, 2:44 am

iCrypt is the biggest scam on the market, they advertise it as the oldest crypter, just to get more sales, but the truth is that it's oversold as fuck and the stubs aren't even FUD at all. If they ever FUD them, they get detected within an hour or so.

The reason nobody wants to say this is because they are afraid of getting -repped, "banned" (lolwat? Why'd I get banned for stating my opinion for something, which is even the truth?), getting their license removed and so on.

I wouldn't really recommend anyone to buy such oversold crypter, you better check out the marketplace, ask for a recommendation in the Marketplace discussions and get a better crypter with better support.

ASM has been proven a whore and so do iCrypt. Just because of the fucking thread, and title says that it's been FUD for 4 years, makes it unbelievable.

I am still not able to understand if it's the scam, why the hell admin isn't removing it being stickied and junking the whole fucking thread. It breaks user policies as mentioned in their '[Help Docs](#)'. Something has to be done before he scams more 1000\$+, alot more than that.

Well guys, he actually PMed me about my problem and is getting my account set up. I will post again to see if it is FUD but he seems to be trying to help people now.

No matter the past experiences of you guys, if he starts providing good customer support and it starts to become FUD, there should be no problems.

This could only just be a momentary thing, and might get better soon, so keep your hopes up. =)

There is always going to be a problem, if there is no customer service or customers get threats for stating that its not FUD and asking questions.

Yes, ASS is reading this thread, thats the reason I got banned because I had a problem with it not being FUD. Bought it a month ago, NOT ONE FUD SCAN.

Somebody is mad? really? Do you really want me to ban the license right now? Then we will see whos mad. Delete the fucking post.

Lol it was a joke. Deleted it btw, also I think if you and OMC are canceling the iCrypt project, I think on the business-side of things, it would make more sense to just tell everyone that you both are ending it instead of just "updating" stubs that are detected by AVG and Avast in less than 10 mins of the release, and rather than slowly ending it.

I understand it was a great run, 4 years, even tho I only got in about 4-6 months. And you guys are working on NG, but still it would be nice to get some re-assurance if you guys are slowly ending iCrypt, because I like it and hate that stubs aren't even FUD anymore.

You have to understand NG Crypter has nothing to do with iCrypt.

We work on many other (non HF related projects) as well. That doesn't mean one drains quality of another. Overall what I am trying to say is that the fact that NG Crypter is launched in the market doesn't mean iCrypt is going down. NG Crypter and iCrypt are 2 different/independent programs.

For some reason I call bull on this one, why would OMC be doing work for two crypters? Unless ASM coded it, but still as guy said above me why is it 10/37 then?

pacman90 - March 4, 2012, 9:52 am

He can ban whoever he wants - it's his software, I just don't see the point in crying about it, move on :) Buy other software and write a constructive review, reviews are always more effective than rants.

In no way am I promoting this product, I've not bought it and I'm not stupid enough to buy it - all I'm saying is I have encountered many problems with people all over the shop (on and offline) if I reacted the way you have to every incident, it wouldn't get me very far.

Thinking in their boots, why would I let somebody use a bit of software they are licensed on if they are damaging the reputation of it? Just doesn't make sense.

Your post in this thread is pointless. If the iCrypt reputation is so important then they should get off of their ass and make it FUD. The point of this thread is to warn people about the SCAM, just because we post stating the faults of iCrypt does not imply that we are crying about anything.

Customers should have a right to give an honest review of a product and not get snuffed out or threatened. Its a very dishonest and shady business practice.

Next time just don't post unless you have something to add to this thread about iCrypt.

There should definitely be a rule against false advertisement, this is basically fraud. Why say that its FUD when stubs aren't FUD on update? Omni should take action here imo.

Buy CrypteX, it starts out at \$10 LIFETIME.. and it's completely FUD. You just have to have the right settings.

This is a good report, I think that there definitely should be a rule banning false advertising.

To the OP: the reported posts count on a user's profile is the number of posts he has reported himself, not the number of times he has been reported.

I personally,never got Icrypt to be FUD.After stubs are just released they are UD allready.

I have bought several crypters on this forum that claimed to be FUD etc. ,but none of them are actually FUD and I don't think you'll ever find one that will actually be FUD for longer then a day.

The only way to make it FUD is tu make it yourself, or to get private stubs.

Mate have you noticed that the IPkiller you've in your signature is sold by the same person as iCrypt is?

Anyways just found this thread: <https://hackforums.net/showthread.php?tid=1772663>

RaptorZT - March 10, 2012, 1:49 pm

iCrypt has a big history of backdooring their stubs. I remember it from the old Hack Hound days - damn, was I a popular member there. Wish it was still up.

Anyways, why not crypt a file and upload it to Anubis? Then you can see if they really backdoor their stubs. If they do, then it will probably become a big deal.

I believe that Omni banned iCrypt sales after the backdoor was discovered. However, I was not a member here then.

I'd have to disagree, it hasn't been updated for 4 days since it started getting detected (forwhateverreason) and I still have my victims. And it's currently 10/37 now.

hahalera94 - March 16, 2012, 11:43 am

I don't use the crypter anymore, so I guess I can share my opinion about it.

I bought iCrypt about 2 months ago and everytime I used it it was not FUD. The best I could get out of it was 1/37, but this right after new stubs were released. Everytime it was slowly raising to 2,3,4,5 / 37 in a matter of hours, without any spreading.

I also bought POE Stealer with iCrypt and it's not working at all, even iStealer (which wasn't updated in like 5 years) sends more logs than POE. And everytime I contacted ASM on Skype to talk about my issues with the crypter and the stealer, he was telling me to send an email to some email address (I can't remember it) from which I never got a response back.

And when I see that little b*tch working on another crypter and UPDATING it, I can only say: DO NOT buy iCrypt, it's USELESS and the BIGGEST SCAM in HackForums history (lol)

This happens to alot of crypters when they sell out, cant do much about it; this is why it's good to only sell on forums like DK that are private.

No retards, and people who just spread the exe everywhere and eventually always ends up on Virustotal.

And with Icrypt it feels quite weird, when i used to go on HH and i saw icropt threads i was like "Damn man, i wish i could afford it" sadly i never could afford it because it was rather expensive.

Now fast forward a few years and this is what you get.

well, i feel real shitty, i referred a lot of people here not really knowing anything about it after dealing with Xinfiltate and his shitty Cypherx SCAM. Sorry to hear about this, can't trust HF at all they support him knowing what he does.

(Mar 18, 2012 05:53 AM)PoisonKnife Wrote: [\[CITE\]](#) If the had seller provided a good customer service this thread would never have been started and the seller could focus on upgrading the product.

I do also think it would be a good idea to focus on selling one crypter and not several.the dude has to have made at least 1,000,000 dollars off this shit already. add up 50 - 100 dollars each with the most promoted crypter on HF. Doesn't take much to reach a million. Now consider that about half of that is probably hush money for HF, and who cares if a few more people dont buy now, he can keep releasin new shit without a bad word from his old customers. He will keep making money. Now compare 1 million to your puny 50 bucks. He of course feels like its no big deal to screw you out of 50 bucks. Meanwhile he's getting richer and richer. Now also remember that its monkey see monkey do around here. I'm sure I'm not the only one who can do simple math or use common sense. A lot of people see this and are not disgusted by it, but inspired.

P.S. ASM - I would be careful ESPECIALLY considering your country is the entire cause for the collapse of the european union. When you reach this level of income without allowing customer reviews, claiming income on taxes, shit like that, quality assurance becomes VERY important when you get into money like that. You can end up in prison very easily at that income with that many scam reports. I would bet my left nut dude you are being investigated already, and believe me it takes a longggg time but they absolutely will get you in the end. Remember, you are getting a lot of money from America, and this country is money crazy and all powerful. When it's enough money, they will pressure your country to hand you over...and trust me, they will. Our techs that work for FBI here are the smartest on earth. There is nothing you can do to hide if they want you bad enough.

lol hundreds sold? I would bet more like THOUSANDS.

Wait wut?

Is this like a lobby or something in which the HF admins and the iCrypt sellers are in? I noticed that Omni or other mods don't do much about the fact, that icrypt is not a crypter anymore. My PM to ASM entitled "Scam report if..." :

Quote:Alright,

This is maybe the 4th or 5th PM I have sent you in the last 2 weeks.

I am strating to get a bit tired of this... So if nothing is done after this last PM, I'll open a scam report. This is not a threat, it is a warning.

I have bought iCrypt on the 1st of November 2011, with Paypal transaction ID : beep
Payment as gift, exactly 50.50\$ and as mention "I, the customer, am paying for virtual goods. I understand that absolutely each sale is final. The initial time of the product's life is determined by the vendor, and I cannot/will not dispute any payments. This payment is final. I agree to these terms for this product."

For the last 2 weeks I was not abble to login to my account, saying that it is registered on another computer. Now I did not change computer nor did I restore it or whatsoever, the HWID should be the same then...

I have sent you many PMs about this problems to you and to Virus and even added you on Skype. But nothing happened, you did not respond and Virus told me to conatct you.

No I know that you connected EVERYDAY FOR THE PAST 2 WEEKS so, either you are ignoring me and are not willing to do anything, either... I do not know what else could possibly make me unelligible for support....

So I demand you to do somthing about this now.

And I will not start deblaterating my impressions about this crypter but hope that the new version is better than the old one, way better...

This is what I think : Omni lives from cash that people like ASM or other members give him... To boost sales and stuff... Now if you even dare talk bad about ASM, Omni will immediatly warn you or ban you... Whatever, just to please ASM to give him money. The thing is, since the forum is starting to become more corrupted and more corrupted, people will start leaving it... ergo : no more sales, ergo : ASM doesnt give any more money to Omni, ergo : omni goes bankrupt, ergo : no more forum...

Either way, if you let ASM do that or not it is too late to do something...
I really dont know how all this is going to turn out...

I just came back to Hackforums from a 3 week ban because I trashed the sales of this product.

I just wanted to say that I am not posting facts anymore as I dont want to get banned again.

I hope you all understand that.. If you want to know what i posted you can look at my previous posts and decide by yourself what is right and what is wrong-

You got banned because you posted in their sales thread. You can still post here whatever you want. ?

And ya, there's no way ASM is getting banned. This whole forum is complete bullshit with shitty products (mooost of them) and with shady people (mainly scammy losers + admins who care only about money--can't blame for that since thats pretty natural).

But It will take along post and some time if I want to write all facts about HF and some analyzes about people who hang out here.

OK, enough for now. Don't buy iCrypt people since at best what it can do is to get your files scantime FUD which means NOTHING. Of course 0/42 might look sexy with green color on it but

unfortunately when files are executed on system with AV-they get busted immediately after second layer of protection comes in play (AKA proactive--and those are common enough nowadays).

So there are no benefits to have scantime FUD files (if you don't have fetish to wank to FUD scan result(s)--then I guess there is benefit but even then iCrypt isn't even scantime FUD).

Yea I also heard it was backdoored! That's not cool there. ASM should get banned if it's true and the coder too.

iCRYPT has ENVER WORKED AS INTENDED. Are you sure you're not ASM?

yes we agreed to the TOS. I however expected ASM to be more professional and not automatically ban me for stating that its not fud. They should make an amendment to their TOS as follows:

"If you say anything negative or ask to many questions to either coder or ASM your license will be banned with NO REFUND"

"We have the right to be dickheads,threaten you and steal your money"

"We have the right to amend posts and get you temp banned"

and last but not least

"we have the right to give away our product for free so people will brown nose and troll on scam reports".

I have no idea why you are sticking up for iCrypt and ASS. the proof of it being A SHITTY CRYPTER is everywhere around you, open your eyes.

Honestly as an banned customer i will quote anything i want! I have no ties to iCrypt anymore and don't care what ASM or anyone else thinks about me. I never stated that it didn't work, i stated that it ISN'T FUD! NEVER HAS BEEN AND NEVER WILL BE!

I didn't try to alter TOS, I stated what should be applied under a revision.

I was banned after i posted in this thread and asked for a refund. NOT FOR ANY OTHER REASON.

Obviously the "Official Support Team" are receiving separate FUD stubs from the rest of the average customers. Thats the only way anyone could be this delusional.

No one would buy it if they were honest lol.

As far as I can tell, OMC is back and ASM is "gone" for the time being. He logs in still but not sure he is involved with iCrypt sales at the moment.

Regardless, the fact that its still not fud after all this time, means that its still useless junk.

I can agree with this guy.

There is no way that every customer gets unique stubs.

Upon update the stub is rarely FUD and even when it's FUD it will stay like it for a couple of hours. I wouldn't suggest buying this.

Thanks,

rofl 1st 2st and 3st hahaha thats just hilarious hahaha thirst..

Anyways, after reading this grueling thread, I am ready to post. I always tend to take more time for

my first posts in any given thread to give my full opinion.

I may or may not have iCrypt, I wouldn't want a certain someone banning my licence if I just happened to have or not have the product. But this is clearly devious how the product is managed along with how it's customers are handled.

Keep in mind, it's all about money. Each single thing and every single thing you see in the marketplace is ALL for the \$\$\$\$.

Omc i'm guessing has some sort of criminal charge of some sort or who knows what, because someone with 4 years of coding experience I'd assume would go get a legit coding job in the real world. I say this because it MUST be hard to constantly keep up with the detection rates that continuously are brought up with 100's of customers using your stub and 100's of customers having tons of questions and I doubt he's doing it cause he loves us haha.

Sadly with this large amount of customers, it requires a proportional amount of people working for him for support.

I remember awhile back when omc sold his stuff on other forums.. after awhile of selling to so many people I suspect he just couldn't keep up. So he stopped providing customer support and just let it die. Eventually those people will move on, because they have to, and omc will be able to get back to selling to a new generation of customers and repeat the process over again. For something lasting 4 years, I think this is pretty probable. A crypter can't have 100% up time, its just too much constant work.

I think it is a bit of a scam to have the power to censor people. We all know censorship is evil, but, like i've said, its all about the CASH. ASM should not be threatening people either, this is extremely bad as a reseller. This sort of customer support is absolutely the opposite of what a good salesman is. I think there should be a better system for rating products on the market.. something as simple as youtubes likes and dislikes bar..

ASM is basically paid to censor people, as it gets more money rolling in. The more money omc get's, the more money ASM gets. Simple, so is it really so surprising that ASM is doing this? I'd say no. You would certainly hope that as the customer, you wouldn't be lied to or cheated to, but come on people, this is hackforums.

Another thing is that for \$50, you are also obligated to like the product. Kind of like buying a mac... it clearly doesn't do as much as what you coulda bought another product for but since you paid so much you might as well like it.

To sum up what i'm saying.. The bigger the project is, the better they are at stealing from you. They have the experience, and honestly I don't think they have much of a choice. Unless omc works full time to find new obfuscating material for his code, having a constant FUD product UNIQUELY for each customer is just not going to happen.. I suggest buying from some of the smaller guys.

nice post :)

problem is, it will not stop until these money hungry hf fucks do something against scammers at all..

they are welcome as long as they pay..

the icrypt gangsters came back after like a month, claiming everything is fixed, sold a bunch of copies to complete retards and then "disappeared" again ?

edit: they delete threads about banking bots, paypal abuse, etc. cause its obv fraud.. but wtf are the scammers doing all day long on this fucking site (who are all welcomed here)? isnt that fraud either? I dont get it..

-C0d3ak- - May 5, 2012, 2:56 pm

As long as money is being made and the forums integrity isn't ruined then I don't think anyone is going to do anything about the scammers.

Also the way rep is set up, I cannot give -1 rep to ASM because then he will just -3 me.

I could -rep omc tho..

Edit: Well isn't that something, l33t can't give -reps ;) such a surprise

Hello Everyone Im from poor Country i spend my last money for Icrypt + POE stealer i have both things... POE stealers bought at January and im still not able to login in it. + Icrypt At the first 1,2 monts worked with 2 days fud. i spend 80\$ for this shit. and i dont care for this i will be banned or not because anyway Icrypt and POE doesnt work for me and they suck. I dont want to make ads or something just want to tell everyone Blackshades R.A.T was the best invest for that i paid in hf ever. im so disapointed because i wanted too much stealer and best crypter and i never had from Asm and crypt, send emails with issues to omc, to asm and i never ran poe and never claim a good service from Icrypt. I support for Bann them + Master logger, Master Crypter too Thanks for pacman opening this thread for me is very difficult to post here detailed just 80 \$ its too much for me but i dont have anything from Icrypt :X

Staff members never get involved in deal disputes unless there is tons of proof. Technically he's not scamming anyone as the crypter is crypting your file... Staff won't get involved this will go on for another 5 years.

poweromania - May 17, 2012, 6:35 pm

it is crypting it, but you get better results with a public crypter. we never had unique stubs, never fud more than 1 day (now it isn't fud for like 1 month), support is shit (you have to wait 5-10 days to get an answer). i was excited 6 months ago when i bought it, i had like 2-3 stubs every 2-3 days, even if it wasn't fud worked ok. but now the detection is like 8-10 AV's and the stub is the same for like 2-3 weeks or so. fuck man, i don't want my money back just do something about it

Mentoring - May 17, 2012, 7:10 pm

I purchased it a while back.. I asked ASM for support 4 times over a course of 2 weeks , and got no reply. I told him on the thread and my post got removed.

He simply ignores me , I don't get the agressiveness you guys get , I just don't get anything.

poweromania - May 18, 2012, 4:14 am

atleast they should said something about this. is the crypter going to be update? the project stopped? why did we paid for "lifetime" if it was working only for a few years or so. they can add a usg to it so that everyone can generate their own stubs
